Teach Yourself VISUALLY™ Office 2013

Table of Contents

Part I: Office Features

Chapter 1: Office Basics

[Start and Exit Office Applications](#)

[Navigate the Program Windows](#)

[Work with Backstage View](#)

[Work with the Ribbon](#)

[Customize the Quick Access Toolbar](#)

[Using an Office Program on a Tablet PC](#)

Chapter 2: Working with Files

[Create a New File](#)

[Save a File](#)

[Open a File](#)

[Print a File](#)

[Check Your File for Hidden or Personal Data](#)

[E-Mail a File](#)

[Select Data](#)

[Cut, Copy, and Paste Data](#)

[Arrange Windows](#)

Chapter 3: Office Graphics Tools

[Insert a Picture](#)

[Insert an Online Picture](#)

[Resize and Move Graphic Objects](#)

Understanding Graphic Object Modification Techniques

Chapter 4: Working with Office Files Online

Office and the Cloud

Sign In to Office Online

Share a Document from Office

Download Apps from the Office Store

Sign In to SkyDrive

Using a Web App in SkyDrive

Using an Office Program from SkyDrive

Upload a Document to SkyDrive

Share a Document Using SkyDrive

Part II: Word

Chapter 5: Adding Text

Change Word's Views

Type and Edit Text

Insert Quick Parts

Insert Symbols

Create a Blog Post

Chapter 6: Formatting Text

Change the Font, Size, and Color

Align Text

Set Line Spacing

Indent Text

Set Tabs

Set Margins

Create Lists

Copy Formatting

Clear Formatting

Format with Styles

[Apply a Template](#)

[Chapter 7: Adding Extra Touches](#)

[Insert an Online Video](#)

[Assign a Theme](#)

[Add Borders](#)

[Create Columns](#)

[Insert a Table](#)

[Apply Table Styles](#)

[Insert an Excel Spreadsheet](#)

[Add Headers and Footers](#)

[Insert Footnotes and Endnotes](#)

[Insert Page Numbers and Page Breaks](#)

[Mark Index Entries](#)

[Generate an Index](#)

[Generate a Table of Contents](#)

[Create a Bibliography](#)

[Chapter 8: Reviewing Documents](#)

[Work in Read Mode View](#)

[Find and Replace Text](#)

[Scan Document Content](#)

[Check Spelling and Grammar](#)

[Check Spelling and Grammar](#)

[Work with AutoCorrect](#)

[Using Word's Thesaurus and Dictionary](#)

[Translate Text](#)

[Track and Review Document Changes](#)

[Lock and Unlock Tracking](#)

[Combine Reviewers' Comments](#)

[Work with Comments](#)

Part III: Excel

Chapter 9: Building Spreadsheets

[Enter Cell Data](#)

[Select Cells](#)

[Faster Data Entry with AutoFill](#)

[Turn On Text Wrapping](#)

[Center Data across Columns](#)

[Adjust Cell Alignment](#)

[Change the Font and Size](#)

[Change Number Formats](#)

[Increase or Decrease Decimals](#)

[Add Cell Borders and Shading](#)

[Format Data with Styles](#)

[Apply Conditional Formatting](#)

[Add Columns and Rows](#)

[Resize Columns and Rows](#)

[Freeze Column and Row Titles On-Screen](#)

[Name a Range](#)

[Clear or Delete Cells](#)

[Split and Format a Column of Data](#)

Chapter 10: Worksheet Basics

[Add a Worksheet](#)

[Name a Worksheet](#)

[Change Page Setup Options](#)

[Move and Copy Worksheets](#)

[Delete a Worksheet](#)

[Find and Replace Data](#)

[Create a Table](#)

[Filter or Sort Table Information](#)

[Analyze Data Quickly](#)

[Understanding Data Analysis Choices](#)

[Track and Review Worksheet Changes](#)

[Insert a Comment](#)

[Chapter 11: Working with Formulas and Functions](#)

[Understanding Formulas](#)

[Create a Formula](#)

[Apply Absolute and Relative Cell References](#)

[Understanding Functions](#)

[Apply a Function](#)

[Total Cells with AutoSum](#)

[Audit a Worksheet for Errors](#)

[Add a Watch Window](#)

[Chapter 12: Working with Charts](#)

[Create a Chart](#)

[Move and Resize Charts](#)

[Change the Chart Type](#)

[Change the Chart Style](#)

[Change the Chart Layout](#)

[Add Chart Elements](#)

[Format Chart Objects](#)

[Change the Chart Data](#)

[Using Sparklines to View Data Trends](#)

[Part IV: PowerPoint](#)

[Chapter 13: Creating a Presentation](#)

[Build a Blank Presentation](#)

[Create a Presentation Using a Template](#)

[Create a Photo Album Presentation](#)

[Change PowerPoint Views](#)

[Insert Slides](#)

[Change the Slide Layout](#)

[Change the Slide Size](#)

[Chapter 14: Populating Presentation Slides](#)

[Add and Edit Slide Text](#)

[Change the Font, Size, and Color](#)

[Apply a Theme](#)

[Set Line Spacing](#)

[Align Text](#)

[Add a Text Box to a Slide](#)

[Add a Table to a Slide](#)

[Add a Chart to a Slide](#)

[Add a Video Clip to a Slide](#)

[Move a Slide Object](#)

[Resize a Slide Object](#)

[Chapter 15: Assembling and Presenting a Slide Show](#)

[Reorganize Slides](#)

[Reuse a Slide](#)

[Organize Slides into Sections](#)

[Define Slide Transitions](#)

[Add Animation Effects](#)

[Create a Custom Animation](#)

[Record Narration](#)

About the Author

Elaine Marmel is President of Marmel Enterprises, LLC, an organization that specializes in technical writing and software training. Elaine has an MBA from Cornell University and worked on projects to build financial management systems for New York City and Washington, D.C. This prior experience provided the foundation for Marmel Enterprises, LLC to help small businesses manage the project of implementing a computerized accounting system.

Elaine spends most of her time writing; she has authored and co-authored more than 65 books about Microsoft Excel, Microsoft Word, Microsoft Project, QuickBooks, Peachtree, Quicken for Windows, Quicken for DOS, Microsoft Word for the Mac, Microsoft Windows, 1-2-3 for Windows, and Lotus Notes. From 1994 to 2006, she also was the contributing editor to monthly publications Inside Peachtree, Inside Timeslips, and Inside QuickBooks.

Elaine left her native Chicago for the warmer climes of Arizona (by way of Cincinnati, OH; Jerusalem, Israel; Ithaca, NY; Washington, D.C., and Tampa, FL) where she basks in the sun with her PC, her cross stitch projects, and her dog, Jack.

Author's Acknowledgments

Because a book is not just the work of the author, I'd like to acknowledge and thank all the folks who made this book possible. Thanks to Jody Lefevere for the opportunity to write this book. Thank you, Vince Averello, for doing a great job to make sure that I "told no lies." Thank you, Mary Louise Wiack, for making sure I was

understandable. And, thank you, Sarah Hellert; your top-notch management of all the players and manuscript elements involved in this book made my life easy and writing the book a pleasure.

Dedication

To Buddy (1995-2012), my constant companion for 17 ½ years. You brought me nothing but joy and I will sorely miss you.

How to Use This Book

Who This Book Is For

This book is for the reader who has never used this particular technology or software application. It is also for readers who want to expand their knowledge.

The Conventions in This Book

① Steps

This book uses a step-by-step format to guide you easily through each task. **Numbered steps** are actions you must do; **bulleted steps** clarify a point, step, or optional feature; and **indented steps** give you the result.

② Notes

Notes give additional information — special conditions that may occur during an operation, a situation that you want to avoid, or a cross-reference to a related area of the book.

③ Icons and Buttons

Icons and buttons show you exactly what you need to click to perform a step.

④ Tips

Tips offer additional information, including warnings and shortcuts.

⑤ Bold

Bold type shows command names or options that you must click or text or numbers you must type.

⑥ Italics

Italic type introduces and defines a new term.

Arrange Windows

You can simultaneously view multiple files. For example, you might view two versions of a Word document side by side to compare their contents or view two Excel workbooks to compare data. If the files you want to compare are particularly long, you can enable the Synchronous Scrolling option to scroll both files at the same time.

In addition to viewing multiple files simultaneously, you can split the window of one long file into scrollable panes to view different portions of it. For example, you might split a document to compare how portions of it are formatted.

Arrange Windows

View Multiple Files

- 1 Open two or more files.
- 2 Click the View tab.
- 3 Click the View Side by Side button.

- 4 Both files appear on-screen side by side.
- 5 To scroll both files at the same time, click the Window button and then click the Synchronous Scrolling button.

- 1 You can click the Maximize button (□) to restore a window to its full size.

- 2 You can click the Close button (×) ...

5

Split a Window

- 1 To split the window displaying a single file into scrollable panes, click the View tab.
- 2 Click the Split button.
- 3 Horizontal and vertical bars appear.
- 4 Drag the bar up, down, right, or left to resize the panes, and click to set the bar in place when the panes are the desired size.

To return the page to a full document, click the Split button again.

TIPS

What does the Switch Windows button do?

If you have two or more files open, click the Switch Windows button to view a list of all open files in the current Office program. You can then choose a file in the list to view it.

Can I display two Excel files one on top of the other?

Yes. Click the View tab and then click the Arrange All button. The Arrange Windows dialog box opens, and you can select how you want to display multiple files: horizontally, vertically, tiled (where each window appears in a square pane), or cascaded (where windows appear one behind another).

4

Part I: Office Features

The Office 2013 applications share a common look and feel. You can find many of the same features in each program, such as the Ribbon, Quick Access Toolbar, program window controls, and File tab. Many of the tasks you perform, such as creating and working with files, share the same processes and features throughout the Office suite. In this part, you learn how to navigate the common Office features and basic tasks.

Chapter 2: Working with Files

Chapter 3: Office Graphics Tools

Chapter 4: Working with Office Files Online

Chapter 1: Office Basics

Start and Exit Office Applications

Office 2013 runs on a 1-gigahertz (GHz) or faster x86- or x64-bit processor with 1 or 2 gigabytes of RAM, based on your processor speed. Your system must be running Windows 7, Windows 8, Windows Server 2008 R2, or Windows Server 2012. For additional requirements, visit <http://technet.microsoft.com/en-us/library/ee624351%28v=office.15%29.aspx>.

This section uses Access to demonstrate how to open a program from the Windows 8 Start screen. Once an Office program opens, its Start screen appears, helping you to find a document on which you recently worked or to start a new document. For other ways to open or start a new document, see Chapter 2.

Start and Exit Office Applications

① On the Windows Start screen, click - to zoom.

Note: You can start typing the name of the program and then skip to Step 3.

Windows zooms out so that you can see tiles for all installed programs.

2 Click any program tile on the right side of the Start screen.

Windows zooms in and enlarges all tiles to their regular size.

3 Click the tile of the program you want to open.

Note: This example uses Access 2013.

Windows switches to the Desktop and opens the program, displaying the program's Start screen, which helps you open new or existing documents; see Chapter 2 for other ways to open documents.

- A** You can use this panel to open an existing document.
- B** You can use this area to start a new document.
- C** This area indicates whether you have signed in to Office Online.
- D** To exit from the program, click the **Close** button (\times) after closing all documents.

TIP

Can I create a shortcut to open an Office application?

Yes. You can create a shortcut icon that appears on the Windows Desktop; however, pinning the program to the Windows taskbar is easier and just as effective because you can then click the taskbar button to start the program. On the Windows Start screen, right-click the tile of the program that you want to pin to the Windows taskbar. The program's App bar appears; click **Pin to taskbar**. Windows 8 pins the

program to the Windows taskbar. To open the program, display the Desktop and click the program's tile on the taskbar.

Navigate the Program Windows

All Office programs share a common appearance and many of the same features, and when you learn your way around one Office program, you can easily use the same skills to navigate the others. These common features include scroll bars, a Ribbon, and a Quick Access Toolbar (QAT). The Ribbon contains commands that Microsoft Office determines that users use most often, and the QAT contains frequently used commands; you can customize both of these elements.

Take a moment to familiarize yourself with each program's various on-screen elements so that you can learn to work quickly and efficiently while you create documents.

A Title Bar

Displays the name of the open file and the Office program.

B Quick Access Toolbar

Displays quick access buttons to the Save, Undo, and Redo commands.

C Ribbon

Displays groups of related commands in tabs. Each tab offers buttons for performing common tasks.

D Program Window Controls

These buttons enable you to view the program in a full screen, with only scroll bars but no other controls. They also allow you to minimize the program window, to maximize or restore the window

including program controls, or to close the window.

E Office Online Indicator

If you see your name, you are signed in to Office Online. You can click  to display a menu that enables you to change your photo, manage your Microsoft account, or switch to a different Microsoft account. If you are not signed in, this area shows a Sign In link. See Chapter 4 for details.

F Scroll Bars

The vertical and, if available, horizontal scroll bars let you scroll through the item shown in the work area, such as a document or worksheet.

G Status Bar

Displays information about the current Office document.

H View Shortcuts

These shortcuts switch to a different view of your document.

I Zoom Controls

This feature changes the magnification of a document.

Work with Backstage View

You can click the File tab to display Backstage view, which resembles a menu. Backstage is the place to go when you need to manage documents or change program behavior. In Backstage view, you find a list of actions — you can think of them as commands — that you can use to, for example, open, save, print, remove sensitive information, and distribute documents as well as set Word program behavior options. You can also use Backstage to manage the places on your computer hard

drive or in your network that you use to store documents and to manage your Office Online account.

Work with Backstage View

- 1 Click the File tab to display Backstage view.

A Commonly used file and program management commands appear here.

B Buttons you can click appear here.

C Information related to the button you click appears here. Each time you click a button, the information shown to the right changes.

Note: The New, Close, and Options commands do not display buttons or information, but take other actions. See Chapter 2 for details.

② Click here to return to the open document.

Work with the Ribbon

In Office 2013, you use the Ribbon to select commands. On each Ribbon tab, you find groups of related command buttons. Each button performs a common task. Some tabs appear only when needed. For example, if you select a picture, the Ribbon displays the Picture Tools tab.

In all Office programs, you can customize the Ribbon. You can create your own Ribbon tab that contains the buttons you use most often; that way, you do not need to switch tabs to use a particular command.

Work with the Ribbon

Using the Ribbon

➊ Click the tab containing the command you want to use.

➋ Click the command.

A Buttons with arrows (▼) display additional commands.

B You can click the dialog box launcher (■) to display a dialog box of additional settings.

Create a Ribbon Tab

➊ Click the **File** tab.

➋ Click **Options** to display the Options dialog box.

③ Click **Customize Ribbon**.

④ Click the tab you want to appear to the left of the new tab.

⑤ Click **New Tab**.

C Word creates a new tab and a new group on that tab. To reposition the tab, click it and click the arrows.

⑥ Click **New Tab (Custom)**.

⑦ Click **Rename** to display the Rename dialog box.

⑧ Type a name for your tab and click **OK**.

⑨ Click **New Group (Custom)** and repeat Steps ⑦ and ⑧ to rename the group.

Add Buttons

- 1 Click the group on the tab you created.
- 2 Click a command.
- D If the command you want does not appear in the list, click the list box arrow (▼) and select **All Commands**.
- 3 Click **Add**.
- E The command appears below the group you created.
- 4 Repeat Steps 2 and 3 for each button you want to add to the group.
- 5 Click **OK**.

F The new tab appears on the Ribbon. If you positioned your tab as the first tab, it will appear each time you open the program.

TIPS

How do I assign keyboard shortcuts to the buttons I add to my group?

You do not need to assign keyboard shortcuts; the program assigns them for you, based on the keys already assigned to commands appearing on the tab where you placed your group. Be aware that you can place the same button on two different tabs, and if you do, the program assigns different keyboard shortcuts to that button on each tab.

What can I do if I decide that I do not want a custom tab on the Ribbon?

Reopen the program's Options dialog box and deselect the check box beside the tab you created (changes to). Click **OK**. When the

program redisplays the Ribbon, your tab will not appear.

Customize the Quick Access Toolbar

The Quick Access Toolbar, or QAT, is located in the top-left corner of the program window above the File and Home tabs. It offers quick access to the frequently used Save, Undo, and Redo commands. If you want, you can customize this toolbar to include other commands you use often, such as the Quick Print command or the Print Preview command, or any other command you want.

You can also reposition the QAT so that it appears below the Ribbon instead of above it; and, if you change your mind, you can put the QAT back above the Ribbon.

Customize the Quick Access Toolbar

① Click .

A You can click any of the common commands to add them to the toolbar.

B You can click **Show Below the Ribbon** if you want to display the toolbar below the Ribbon.

② Click More Commands.

The Options dialog box appears.

③ Click the Choose commands from ▾.

④ Click a command group.

- 5 Click the command that you want to add to the toolbar.
- 6 Click Add.
- C Office adds the command.

You can repeat Steps 3 to 6 to move additional buttons to the toolbar.

- 7 Click OK.

D The new command appears on the Quick Access Toolbar.

TIPS

How do I remove a button from the Quick Access Toolbar?

To remove a command, reopen the program's Options dialog box by following the steps in this section, click the command name in the list on the right, click the **Remove** button, and click **OK**. The button no longer appears on the toolbar.

Are there other ways to customize the Quick Access Toolbar?

Yes. You can add commands to the toolbar directly from the Ribbon. Simply click the tab containing the command that you want to add, right-click the command, and then click **Add to Quick Access Toolbar**. The command is immediately added as a button on the toolbar.

Using an Office Program on a Tablet PC

If you are using Office 2013 with Windows 8 on a tablet PC, you need to know some basic touch gestures. Using a tablet PC is a different experience than using a computer with a keyboard and mouse, but Windows 8 was built with the tablet PC in mind, so the touch gestures are intuitive and easy to learn.

On a tablet PC, you use your fingers (or sometimes a stylus, if your tablet comes with one) to run applications, select items, and manipulate screen objects. This might seem awkward at first, but just a little practice of the gestures in this section will make your experience natural and easy.

Using an Office Program on a Tablet PC

Start a Program

Note: This section uses Word to demonstrate gestures.

Start

Elaine Marmel

- ➊ Position your finger or the stylus over a blank spot toward the bottom of the Windows 8 Start screen.
- ➋ Quickly move your finger or the stylus across the tablet screen — called *swiping* — from the right edge to the left edge of the tablet. Windows 8 displays the tiles on the right side of the Start screen.

- ③ Tap the Word tile to switch to the Desktop and open Word to the Word Start screen.

Swipe the Screen

- ① Click to switch to Word's Read Mode view.

Note: See Chapter 8 for details.

- ② Swipe left from the right edge of the tablet to read the next page.
③ Swipe right from the left edge of the tablet to read the previous page.

Move an Object

- ① Position your finger or the stylus over the item you want to move.
② Tap and hold the item and begin moving your finger or the stylus.

A The object moves along with your finger or the stylus, and an alignment guide helps you find a position for the object.

③ When the object appears where you want it, lift your finger or the stylus off the screen to complete the move and hide the alignment guide.

TIPS

How do I close a program using gestures?

Position your finger or the stylus at the top edge of the tablet and then slide it down the screen. At first you see the Windows 8 application bar for the program, so keep sliding. When you get about halfway, the application becomes a small window. Keep dragging that small window to the very bottom of the screen, and then lift your finger or the stylus. Windows 8 shuts down the application.

After I tap the Desktop tile, how do I return to the Start screen?

You can do this in a couple of ways. Because the Desktop is an

application, you can close it using the technique described in the preceding tip. Alternatively, swipe left from the right edge of the tablet to display the Charms bar, and then tap the **Start** icon.

Chapter 2: Working with Files

Create a New File

When you open an Office program (except Outlook), the program's Start screen greets you; see Chapter 1 for details. If Word, Excel, PowerPoint, Access, or Publisher are already open and you want to create a new document, workbook, presentation, database, or publication, you create a new file using Backstage view. When you do, you have the option of creating a blank file or basing the file on a template. Outlook opens by default to the Inbox, and, to create a new item in Outlook, whether it is an e-mail message, a calendar appointment, a contact, or a task item, you use the Ribbon.

Create a New File

Create a New Word, Excel, PowerPoint, Access, or Publisher File

- 1 Click the File tab.
Backstage view appears.

- 2 Click New.
The New screen appears.

3 Click the type of file that you want to create.

If you click a template, a preview appears; if you like what you see, click **Create** and the new file opens.

If you click a blank document, no preview appears; instead, a new blank document appears.

Create a New Outlook Item

1 In the Navigation bar at the bottom of the Outlook window, click the type of item you want to create — Mail, Calendar, People, or Tasks.

2 Click the appropriate **New** button. For example, if you are creating a Mail item, the button is labeled New Email. If you are creating a Calendar item, the button is labeled New Appointment, New Meeting, and so on.

A The new item opens.

TIPS

What is a template?

A template is a file containing predefined settings that serve as the foundation for your document, saving you the effort of manually creating the settings. Word, Excel, PowerPoint, Access, and Publisher 2013 display a variety of templates on the program Start screen and also when you start a new document while working in the program.

Where can I find more templates to use with my Microsoft Office programs?

At Office Online. At the top of the program Start screen or on the New screen, click in the **Search online templates** box, describe the type of template you want, and click .

Save a File

You save files so that you can use them at another time in Office programs. When you save a file, you can give it a unique filename and store it in the folder or drive of your choice.

After you save a document for the first time, you can click the Save button on the Quick Access Toolbar (QAT) to save it again. The first time you save a document, the program prompts you for a document name. Subsequent times, when you use the Save button on the QAT, the program saves the document using its original name without prompting you.

Save a File

A Before you save a document, the program displays a generic name in the title bar.

1 Click the **File** tab.

Backstage view appears.

2 Click **Save As**.

3 Click **Computer**.

B If the folder in which you want to save the document appears here, click it and skip to Step **5**.

4 Click **Browse**.

The Save As dialog box appears.

5 Type a name for the document here.

C You can click here to select a location on your computer in which to save the document.

D You can click the **New Folder** button to create a new folder in which to store the document.

6 Click Save.

E Word saves the document and displays the name you supplied in the title bar.

F For subsequent saves, you can click the **Save** button (□) on the Quick Access Toolbar to quickly save the file.

TIP

Can I save a file using a different file type?

Yes. Each Office program saves to a default file type. For example, a Word document uses the DOCX file format and Excel uses the XLSX file format. If you want to save the file in a format compatible with previous versions of Office, you must save it in the appropriate format, such as Word 97-2003 Document for previous versions of Word. To save a file in a different format, click the **Save as Type ▾** in the Save As dialog box and choose the desired format from the list that appears.

Open a File

You can open documents that you have created and saved previously in order to continue adding data or to edit existing data, regardless of where you store the files. If you are not sure where you saved a file, you can use the Open dialog box's Search function to locate it.

New to Word 2013, you can open and edit PDF files. However, editing a PDF file in Word works best if you used Word to create the original PDF file. If you used a different program to create the PDF file, you will find that Word has difficulty maintaining the file's formatting.

Open a File

① Click the **File** tab.

Backstage view appears.

② Click **Open**.

A Recently opened documents appear here. If you see the file you want

to open, you can click it to open it and skip the rest of these steps.

3 Click the place where you believe the document is stored. This example uses **Computer**.

Note: If you choose the wrong place, you can search for the file.

B If the folder containing the document appears here, click it and skip to Step **5**.

4 Click **Browse**.

The Open dialog box appears.

- 5 Click here to navigate to the folder containing the document you want to open.
- 6 Click the document you want to open.
- 7 Click Open.

The file opens in the program window.

Note: To close a file, click in the upper-right corner. If you have not saved the file, the program prompts you to save it.

TIP

What if I cannot find my file?

You can use the Search box in the upper-right corner of the Open dialog box to locate files. Complete Steps 1 to 4 to display the Open dialog box. Locate and open the folder in which you believe the file was saved and type the file's name in the Search box. Files containing the search term appear highlighted along with files containing a close match.

Print a File

If a printer is connected to your computer, you can print your Office files. For example, you might distribute printouts of a file as handouts in a meeting.

When you print a file, you have two options: You can send a file directly to the printer using the default settings or you can open the Office application's Print screen to change these settings. For example, you might opt to print just a portion of the file, print using a different printer, print multiple copies of a file, collate the printouts, and so on. (Printer settings vary slightly among Office programs.)

Print a File

- 1 Click the **File** tab.

Backstage view appears.

2 Click **Print**.

A You can specify the number of copies to print using the **Copies** spin box.

B You can choose a printer from the **Printer** drop-down list.

C You can choose to print a selection from the file or specific pages using the available settings in the **Settings** list.

D You can select additional print options under Settings. For example, you can click here to choose from various paper sizes and to print in landscape or portrait orientation.

E You can page through a preview of your printed file by clicking here.

③ Click Print.

The Office program sends the file to the printer for printing.

TIP

How do I print using default settings?

If you do not need to change any of your default print settings, you can simply click the **Quick Print** button (printer icon) on the Quick Access Toolbar. If the Quick Print button does not appear on your QAT, you can add it. To do so, click  to the right of the QAT and click **Quick Print** in the list of commands that appears. You can also add a Print Preview and Print button (print icon) to the QAT; clicking that button opens the Print screen.

Check Your File for Hidden or Personal Data

You can remove any personal information that an Office program stores in a document. For issues of privacy, you may want to remove this information before you share a document with anyone.

Depending on the Office program, the Document Inspector searches your document for comments, revision marks, versions, and ink annotations. It searches document properties for hidden metadata and personal information. It inspects for task pane apps saved in the document as well as information like hidden rows, columns, or worksheets. If your document contains custom XML data, headers, footers, watermarks, or invisible content, the Document Inspector alerts you.

Check Your File for Hidden or Personal

Data

- 1 In the document you want to check for sensitive information, click the **File** tab.

Backstage view appears.

The screenshot shows the Microsoft Word Backstage view with the 'Info' tab selected, highlighted with a red circle labeled '2'. On the left, there is a vertical menu with options like Info, New, Open, Save, Save As, Print, Share, Export, Close, Account, and Options. In the center, under the 'Protect Document' section, there is a button labeled 'Check for Issues' with a red circle labeled '3'. Below it, there are three other inspection tools: 'Inspect Document', 'Check Accessibility', and 'Check Compatibility', each with a small icon and a brief description. A red circle labeled '4' points to the 'Check for Issues' button. To the right, there are sections for 'Properties', 'Related Dates', 'Related People', and 'Related Documents'.

2 Click Info.

3 Click Check for Issues.

4 Click Inspect Document.

Note: If you have unsaved changes, Word prompts you to save the document, which you do by clicking Yes.

The Document Inspector window appears.

A You can deselect check marks (changes to) to avoid inspecting for these elements.

5 Click Inspect.

The Document Inspector looks for the information you specified and displays the results.

B You can remove any identified information by clicking **Remove All** beside that element.

C You can click **Reinspect** after removing identifying information.

⑥ Click **Close**.

TIPS

Can I review the information that the Document Inspector displays before I remove it?

No. The only way to review the information before you remove it is to close the Document Inspector *without* removing information, use the appropriate Word features to review the information, and then rerun the Document Inspector as described in this section.

What happens if I remove information and then decide that I really want that information?

You cannot undo the effects of removing the information using the Document Inspector. However, to restore removed information, you can close the document *without* saving changes and then reopen it.

E-Mail a File

You can share a file with others via e-mail. For example, suppose that you have a colleague who must present a project for approval at an upcoming meeting. Your colleague approaches you, asking for guidance concerning what to discuss. You put together a skeleton PowerPoint presentation and you want to e-mail it to your colleague.

You could create a new e-mail message in Outlook and add the file as an attachment, as discussed in Chapter 19. Or, you can send a file from the program you used to create the file, as described here. Note that, to open the file, recipients must have the appropriate software on their computer.

E-Mail a File

- 1 With the document you want to share via e-mail open, click the File tab.

Backstage view appears.

- 2 Click Share.

3 Click **Email**.

A Options for e-mailing the file appear here.

4 Click **Send as Attachment**.

Note: If you are sending a file that you do not want anyone to edit, click **Send as PDF** or **Send as XPS**.

Office launches an Outlook New Message window.

B The name of your file appears in the New Message window's Subject line.

C The file is attached to the message.

- ➅ Type the message recipient's e-mail address in the **To** field.
- ➆ Type your text in the body of the message.
- ➇ Click **Send**.

Office places the message in your e-mail program's outbox.

TIP

What if my recipient does not have the necessary software to open the file?

You can send the file in PDF or XPS format, which maintains the appearance of your file, but the file cannot easily be changed — meaning your recipient cannot edit the file. Alternatively, you can suggest that the recipient download an Office program viewer from <http://office.microsoft.com>; a viewer can, for example, help an Office 2007 user open an Office 2013 file. Finally, you can suggest that the recipient use the appropriate Office Web App, available in SkyDrive; see Chapter 4.

Select Data

You can select data in your file to perform different tasks, such as deleting it, changing its font or alignment, applying a border around it, or copying and pasting it. Selected data appears highlighted.

Depending on the program you are using, Office offers several different techniques for selecting data. For example, in Word, PowerPoint, Outlook, and Publisher, you can select a single character, a word, a sentence, a paragraph, or all the data in the file. In Excel and Access tables, you typically select cells. In One Note, use the technique appropriate to the type of data you want to select.

Select Data

Select Data in Word, PowerPoint, or Publisher

Note: You can use this technique to select characters, words, sentences, and paragraphs.

① Click to one side of the word or character that you want to select.

② Drag the mouse pointer across the text that you want to select.

A The program highlights the characters to indicate that they are selected.

To cancel a selection, click anywhere outside the text or press any arrow key on your keyboard.

Select Cells in Excel or Access

Company	Industry	January	February

- 2 Drag the cell pointer across the cells you want to select.

B The program highlights the characters to indicate that they are selected.

To cancel a selection, click anywhere outside the text or press any arrow key on your keyboard.

TIP

How can I use my keyboard to select text?

To select text or cells to the left or right of the insertion point or cell pointer, press **Ctrl+Shift+←** or **Ctrl+Shift+→**. To select a paragraph or cells above or below the insertion point or cell pointer, press **Ctrl+Shift+↑** or **Ctrl+Shift+↓**. To select all text or cells from the insertion point or cell pointer location onward, press **Ctrl+Shift+End**. To select all of the text or cells above the insertion point or cell pointer location, press **Ctrl+Shift+Home**. To select all the text or cells containing data in the file, press **Ctrl+A**.

Cut, Copy, and Paste Data

You can use the Cut, Copy, and Paste commands to move or copy data. For example, you might cut or copy text or a picture from a Word document and paste it elsewhere in the same Word document, in another Word document, or in a PowerPoint slide or a Publisher file.

When you cut data, it is removed from its original location; when you copy data, the selected data is duplicated, leaving it in its original location. You can move or copy data using two methods: drag-and-drop or buttons on the Ribbon. This section uses Word to drag-and-drop, and Excel to demonstrate Ribbon buttons.

Cut, Copy, and Paste Data

Cut or Copy in Word, PowerPoint, Publisher, or Outlook

- ➊ Select the data that you want to cut or copy. This example cuts text.
- ➋ Click and drag the data to a new location.

A As you drag, changes to .

To copy the data, you can press and hold as you drag, and changes to .

B A bold insertion point marks where the text will appear as you drag.

- ➌ Release the mouse to drop the data in place.

September 3, 2012

Jane Smith
Memorial Sprinklers, LLC
4816 Memorial Hwy., Suite 200
Phoenix, AZ 85000

Dear Ms. Smith:

Thank you for selecting Marmel Enterprises, LLC to assist you in using some of your Microsoft Office products, specifically Microsoft Word 2013 and Microsoft Excel 2013.

As we agreed, training classes will be held as follows:

Class 1	September 17
Class 2	September 18
Class 3	September 21

Marmel Enterprises, LLC looks forward to helping you choose how best to use these programs to meet your needs and to possibly provide support for Microsoft Project as well. Please be aware that these programs are multi-faceted and can be used in different ways by different people. Because each user can use each program differently, please understand the following in retaining Marmel Enterprises, LLC.

- Because you are best qualified to assess your business and your needs, it is your responsibility to decide what information you desire from these programs and how these programs should be used in your office to suit your purposes best. The accuracy of the information you receive from these programs is entirely dependent on the accuracy of the data that you enter into them.

Sheet1

READY

① Select the cell(s) that you want to cut or copy. This example copies a formula.

2 Click the **Home** tab.

3 Click the **Cut** button (✂) to move data or the **Copy** button (📋) to copy data.

Note: You can also press **Ctrl+X** to cut data or **Ctrl+C** to copy data.

The outline around the selected cell(s) changes to an animated dashed box and the data is stored in the Office Clipboard.

4 Select the cells where you want the cut or copied data to appear.

Note: You can also open another file into which you can paste the data.

5 On the Home tab, click the **Paste** button. Alternatively, to preview how the text will look before you paste it, click the down arrow below the Paste button and position your mouse pointer over each button that appears.

Note: You can also press **Ctrl+V** to paste data.

D The data appears in the new location.

When I paste cut or copied data, an icon appears. What is it?

This is the Paste Options button (). You can use it to view Paste-formatting choices; the options that appear depend on the program you are using and the location where you want to paste. You can click one of these options or ignore ; eventually, it disappears.

Can I cut or copy multiple selections?

Yes, you can, using the Office Clipboard, which holds up to 24 items that you can paste in any order you choose. To display the Office Clipboard, click the dialog box launcher () in the Clipboard group on the Ribbon's Home tab. Then select and cut or copy.

Arrange Windows

You can simultaneously view multiple files. For example, you might view two versions of a Word document side by side to compare their contents or view two Excel workbooks to compare data. If the files you want to compare are particularly long, you can enable the Synchronous Scrolling option to scroll both files at the same time.

In addition to viewing multiple files simultaneously, you can split the window of one long file into scrollable panes to view different portions of it. For example, you might split a document to compare how portions of it are formatted.

Arrange Windows

View Multiple Files

- 1 Open two or more files.
- 2 Click the View tab.
- 3 Click the View Side by Side button.

- A Both files appear on-screen side by side.

B To scroll both files at the same time, click the **Window** button and then click the **Synchronous Scrolling** button.

C You can click the **Maximize** button (□) to restore a window to its full size.

D You can click the **Close** button (✖) to close a file.

Split a Window

- ➊ To split the window displaying a single file into scrollable panes, click the **View** tab.
 - ➋ Click the **Split** button.
 - ➌ Drag the bar up, down, right, or left to resize the panes, and click to set the bar in place when the panes are the desired size.
- To return the page to a full document, click the **Split** button again.

TIPS

What does the **Switch Windows** button do?

If you have two or more files open, click the **Switch Windows** button to view a list of all open files in the current Office program. You can then choose a file in the list to view it.

Can I display two Excel files one on top of the other?

Yes. Click the **View** tab and then click the **Arrange All** button. The Arrange Windows dialog box opens, and you can select how you want to display multiple files: horizontally, vertically, tiled (where each window appears in a square pane), or cascaded (where windows appear one behind another).

Chapter 3: Office Graphics Tools

Insert a Picture

You can illustrate your Office files with images that you store on your computer. For example, if you have a photo or graphic file that relates to your Excel data, you can insert it onto the worksheet. If you have a photo or graphic file that relates to the subject matter in your document, you can insert it into the document to help the reader understand your subject. After you insert a picture, you can resize, move, or modify the graphic in a variety of ways, as described in the section “Understanding Graphic Object Modification Techniques” later in this chapter.

Insert a Picture

1 Click in your document where you want to add a picture.

Note: You can move the image to a different location after inserting it onto the page. See the section “Resize and Move Graphic Objects.”

2 Click the **Insert** tab.

3 Click **Pictures**.

The Insert Picture dialog box appears.

A The folder you are viewing appears here.

Note: Image files come in a variety of formats, including GIF, JPEG, and PNG.

B To browse for a particular file type, you can click and choose a file format.

C You can click here to navigate to commonly used locations where pictures may be stored.

- ④ Navigate to the folder containing the picture you want to add to your document.
- ⑤ Click the picture you want to add.
- ⑥ Click **Insert**.

- D** The picture appears in your document, selected and surrounded by handles (▫ and □).
- E** Drag □ to rotate the picture (▫ changes to □).

F On the Home tab, click **Wrap Text** to control text flow around the picture.

G Picture Tools appear on the Ribbon; you can use these tools to format pictures.

To remove a picture that you no longer want, you can click the picture and press **Delete**.

TIPS

If I am sharing my file with others, can I compress the pictures to save space?

Yes. You can compress image files that you add to any file. To do so, click the image, click the **Format** tab on the Ribbon, and click the **Compress Pictures** button () in the Adjust group. In the Compress Pictures dialog box, fine-tune settings as needed and click **OK** to compress the pictures.

I made changes to my picture, but I do not like the effect. How do I return the picture to the original settings?

You can click the **Reset Picture** button (, located in the Adjust group on the Format tab, to restore a picture to its original state. This command removes any edits that you applied to the image. Activating this command does not restore the original size of the image.

Insert an Online Picture

In addition to pictures stored on your computer's hard drive, you can add interest to your Office files by inserting a picture or clip art image from an online source into a Word, Excel, PowerPoint, Publisher,

Outlook, or OneNote document. Be careful when choosing online pictures and make sure that they fall into the public domain or that you have written permission to use the picture.

The pictures and clip art found at [Office.com](#) are all public domain art and you can freely use any of these images. None of the Office 2013 applications come with any preinstalled clip art as previous versions did.

Insert an Online Picture

Note: If you are working in Word or Excel, switch to Print Layout view.

- ① Click in your document where you want to add a picture.

Note: You can move the graphic to a different location after you insert it. See the next section, “Resize and Move Graphic Objects.”

- ② Click the **Insert** tab.

- ③ Click **Online Pictures**.

Note: In some Office programs, Online Pictures does not appear directly

on the Insert tab. In this case, click **Illustrations**.

The Insert Pictures window appears.

- ④ Click here and type a description of the kind of image you want.
- ⑤ Click the **Search** button (🔍).

The results of your search appear.

- A You can click here (▲ and ▼) to navigate through the search results.
- B You can click here to return to the Insert Picture window and search for a different image.
- ⑥ Click the picture you want to add to your document.

7 Click Insert.

C The picture appears in your document, selected and surrounded by handles (□).

D Drag ♡ to rotate the picture.

E You can click Wrap Text or ☐ to control text flow around the picture.

F Picture Tools appear on the Ribbon; you can use these tools to format the picture.

When you finish working with your online picture, click anywhere else in the work area.

TIPS

Why must I make sure that the image I choose falls into the public domain?

Images that are privately owned are often available for use only if you

agree to pay a fee and/or give credit to the owner of the image. To use a public domain image, you do not need to pay a royalty and you do not need permission from an image owner to use the image.

What happens when I search for images using Bing?

Like the results of a search of [Office.com](#), the search results appear in a window. A message states that search results are licensed under Creative Commons and that you need to review the specific license for any image you want to use to ensure that you can comply with the license. Bing searches do not exclude pictures outside the public domain.

Resize and Move Graphic Objects

Pictures and other types of images are also called *graphic objects*. If a graphic object is not positioned where you want it or if it is too large or too small, you can move or resize it. When you select a graphic object, handles appear on each side of the graphic object; you can use these handles to resize it. Alignment guides — green lines — appear as you move a graphic object to help you determine where to place it. Once you have picked the spot for the graphic, the alignment guides disappear.

Resize and Move Graphic Objects

Move a Graphic

➊ Click a graphic object.

A Handles (▫) surround the graphic.

Note: In Publisher, ▫ and □ surround the graphic.

➋ Position the mouse pointer over a graphic object or the edge of a text box (I=, I, or + changes to *).

③ Drag the graphic object to a new location.

B In Word, green alignment guides help you position the graphic object.

④ Release the mouse button.

The graphic object appears in the new location and, in Word, the alignment guides disappear.

⑤ Click outside the graphic object to cancel its selection.

Resize a Graphic

① Click a graphic object.

C Handles (▫) surround the graphic.

Note: In Publisher, □ and ▨ surround the graphic.

② Position the mouse pointer over one of the handles (I, I, or + changes to ↗, ↘, ↙, or ↛).

③ Drag the handle inward or outward until the graphic object is the appropriate size (, , , or changes to).

④ Release the mouse button.

The graphic object appears in the new size.

⑤ Click outside the graphic object to cancel its selection.

TIPS

Can I control how text wraps around an object?

Yes, if you insert the object into a Word or Publisher file. Click the object, click the **Wrap Text** button on the Format tab, and choose a wrap style. In Word, you also can click .

Does it matter which handle I use to resize a graphic?

Yes. If you click and drag any of the corner handles, you maintain the proportion of the graphic as you resize it. The handles on the sides, top, or bottom of the graphic only resize the width or the height of the

graphic, so using one of them can make your graphic look distorted, especially if you resize a picture, video, or screenshot using any handle except a corner handle.

Understanding Graphic Object Modification Techniques

In addition to inserting, moving, and resizing pictures as described in this chapter, you can insert and modify other types of graphic objects — shapes, screenshots, SmartArt, WordArt, and charts — in all Office programs except Access. The available graphic objects vary from program to program; the specific types of available graphic objects appear on the Insert tab of the program. You insert these objects using basically the same techniques you use to insert pictures.

You can modify an object's appearance using a variety of Ribbon buttons that appear on a Tools tab specific to the type of graphic object you select.

Crop a Picture

You can use the Crop tool to create a better fit, to omit a portion of the image, or to focus the viewer on an important area of the image.

You can crop a picture, screenshot, or clip art image. When you crop an object, you remove vertical and/or horizontal edges from the object. The Crop tool is located on the Format tab on the Ribbon, which appears when you click the object you want to crop.

Rotate or Flip a Graphic

After you insert an object such as a piece of clip art or a photo from your hard drive into a Word document, you may find that the object appears upside down or inverted. Fortunately, Word makes it easy to flip or rotate an object. For example, you might flip a clip art image to face another direction, or rotate an arrow object to point elsewhere on the page. Or, for dramatic effect, you can rotate or flip pictures, clip art images, and some shapes. Keep in mind that you cannot rotate text boxes.

Correct Images

You can change the brightness and contrast of a picture, clip art, or a screenshot to improve its appearance, and you can sharpen or soften an image. Suppose, for example, the image object you have inserted in your Word, Excel, or PowerPoint file is slightly blurry, or lacks contrast. You find the image-correction tools on the Picture Tools Format tab on the Ribbon, which appears when you click to select the object to which you want to apply the effect.

Make Color Adjustments

You can adjust the color of a picture, screenshot, or clip art image by increasing or decreasing color saturation or color tone. You can also recolor a picture, screenshot, or clip art image to create an interesting effect.

Color saturation controls the amount of red and green in a photo, while color tone controls the amount of blue and yellow.

Remove the Background of an Image

You can remove the background of a picture, screenshot, or clip art

image. For example, suppose that you inserted a screenshot of an Excel chart in a Word document; the screenshot would, by default, include the Excel Ribbon. You can use the Remove Background tool in the Adjust group on the Picture Tools Format tab to remove the Excel Ribbon and focus the reader's attention on the chart.

Add an Effect

You can use tools to assign unique and interesting special effects to objects. For example, you can apply a shadow effect, create a mirrored reflection, apply a glow effect, soften the object's edges, make a bevel effect, or generate a 3D rotation effect. You can find these tools on the Format tab of the Ribbon, which appears when you click to select the object to which you want to apply the effect. (Note that the Picture Effects tool is not available in Publisher.)

Apply a Style to a Graphic

You can apply a predefined style to a shape, text box, WordArt graphic, picture, or clip art image. Styles contain predefined colors and effects and help you quickly add interest to a graphic. Applying a

style removes other effects you may have applied, such as shadow or bevel effects. Sample styles appear on the Picture Tools Format or Drawing Tools Format tab when you click ▾ in the Picture Styles or Shape Styles group.

Add a Picture Border or Drawing Outline

You can add a border to a picture, shape, text box, WordArt graphic, clip art image, or screenshot. Using the Picture Border or Shape Outline tool, which appears on the Picture Tools Format or Drawing Tools Format tab, you can control the thickness of the border, set a style for the border — a solid or dashed line — and change the color of the border.

Apply Artistic Effects

You can apply artistic effects to pictures, screenshots, and clip art in order to liven them up. For example, you can make an image appear as though it was rendered in marker, pencil, chalk, or paint. Other artistic effects might remind you of mosaics, film grain, or glass. You

find the Artistic Effects button on the Picture Tools Format tab, which appears when you click to select the object to which you want to apply the effect.

Chapter 4: Working with Office Files Online

Office and the Cloud

Office 2013 offers a completely new experience when it comes to working in a mobile environment. Today, people are on the go but often want to take work with them to do while sitting in the waiting room of their doctor's office, at the airport, or in a hotel room. Office 2013 was designed to help you work from anywhere using almost any device available because, among other reasons, it works with SharePoint and SkyDrive, Microsoft's cloud space. From SkyDrive, you can log into cloud space and, using Office Web Apps — essentially, tools with which you are already familiar — get to work.

Sign In to Office Online

Office Online connects your Office programs to the world beyond your computer. When you sign in on any device and launch an Office program, the program Start screen and the program window show that you are signed in. Signing in gives you access to online pictures and clip art stored at Office.com and enables Office to synchronize files between your computer, SkyDrive, and SharePoint.

SkyDrive and Office 2013

The SkyDrive app is a cloud storage service from Microsoft that comes with Office 2013; 7GB are free, and you can rent additional space. Office 2013 saves all documents by default to your SkyDrive so that your documents are always available to you.

Using Office Web Apps

You can open and edit Word, Excel, OneNote, and PowerPoint documents from your SkyDrive using Office Web Apps, which are scaled-down editions of Office programs that you can use to easily review documents and make minor changes.

Take Your Personal Settings with You Everywhere

Office 2013 keeps track of personal settings like your recently used files and favorite templates and makes them available from any computer. Word and PowerPoint also remember the paragraph and

slide you were viewing when you close a document, and they display that location when you open the document on another machine, making it easy for you to get back to work when you move from one work location to another.

Your Documents Are Always Up to Date

Office 2013 saves your Office documents by default in the SkyDrive folder that installs along with Office. As you work, Office synchronizes files with changes to your SkyDrive in the background. And, the technology does not slow down your work environment, because Office only uploads changes, not entire documents, saving bandwidth and battery life as you work from wireless devices.

Share Your Documents from Anywhere

You can share your documents both from within an Office program and from your SkyDrive. And, from either location, you can e-mail a

document to recipients you choose, post a document at a social media site, or create a link to a document that you can provide to users so that they can view the document in a browser. You can also use Microsoft's free online presentation service to present Word and PowerPoint documents online.

Take Advantage of the Office Store

Office Store

The Office Store contains add-in applications that work with Office programs. For example, the dictionary you use to look up words in Microsoft Word or Excel 2013 does not automatically install when you install the program. But, when you need an add-on for Word or Excel, you can download it from the Office Store. Click the **Office Store** button to open your browser to the Office Store web page.

Office 2013 on Demand

Office 2013 comes in three “traditional” editions, where you buy the program; you can install any traditional edition on one machine. Office 2013 also comes in two “subscription” editions; essentially, you pay an annual rental fee to use the software on five PCs or Macs. Subscription editions include the Office on Demand feature; subscribers can run temporary instances of Word, Excel, PowerPoint, Access, Publisher, Visio, and Project on computers where they normally would not be able to install software. To keep the process fast, only parts of the application actually download as needed, and it runs locally. When a program closes, it uninstalls itself.

Subscribers must be online and logged in to validate their right to use Office on Demand.

Sign In to Office Online

You can use Office Online to work from anywhere. Sign in to Office Online using any of your devices and then, using one of the Office Web Apps, go to work. Office remembers some of your personal settings such as your Recent Documents list so that you always have access to them.

When you work offline, Office creates, saves, and opens your files from the local SkyDrive folder. Notifications appear periodically, reminding you that you are working offline. Occasionally, Office alerts you if changed files are pending upload to the cloud. Whenever you reconnect, Office automatically uploads your changes to the cloud.

Sign In to Office Online

- ① Open an Office program.

The program's Start screen appears.

B This area indicates that you have signed in to Office Online.

TIP

How do I sign out of Office Online?

Sign in to Windows 8 using a local account and follow these steps:

- 1 Click the File tab.

② Click **Account**.

Note: In Outlook, click **Office Account**.

③ Click **Sign Out**.

A The Remove Account dialog box appears to warn you that continuing removes all customizations and synchronization might stop.

Note: In most cases, it is perfectly safe to click **Yes**. If you are unsure, check with your system administrator.

④ Click **Yes**.

Share a Document from Office

You can easily share documents using Office Online. You can share an Office document by posting it using a social network or to a blog or sending a document as an e-mail attachment. You can also take advantage of a free presentation service Microsoft offers and share your document by presenting it online. Or, as shown in this section, you can send a link to your SkyDrive — as part of Office 2013, you receive free

cloud space at SkyDrive — where the recipient can view and even work on only the shared document. When you finish, you can stop sharing the document.

Share a Document from Office

Share a Document

Note: The document you want to share must be stored in the cloud. See the tip at the end of this section for details.

- With the document you want to share on-screen, click the File tab. Backstage view appears.

- ② Click **Share**.
- ③ Click **Invite People**.
- ④ Type e-mail addresses of people with whom you want to share here.

Note: If you type multiple addresses, Office separates them with a semicolon (;).

- ⑤ Specify whether these people can edit or simply view the document.

A You can type a personal message to include with the invitation.

- ⑥ Click **Share**.

Office sends e-mails to the people you listed.

B Recipients with whom you shared the document appear here.

Stop Sharing

① Open the document you want to stop sharing and click the **File** tab.

② Click **Share**.

③ Click Invite People.

④ Right-click the recipient with whom you no longer want to share.

⑤ Click Remove User.

The program updates document permissions and removes the user from the screen.

TIP

Why do I see a screen indicating I must save my document before sharing it?

If you have not previously saved your document to your SkyDrive, the Office program prompts you to do so before starting the Share process. By default, Office saves all your documents to your SkyDrive, but, if you changed that option, click the **Save to Cloud** button that appears. The program displays the Save As pane in Backstage view; click your SkyDrive and then click a folder in the Recent Folders list or click **Browse** to navigate to the SkyDrive folder where you want to place the document.

Download Apps from the Office Store

You can use the Office Store to download add-on applications, or *apps*, for Word, Outlook, or Excel. For example, the dictionary you use to look up words in Word 2013 does not automatically install when you install the program. But, when you need an add-on, you can download it from the Office Store.

The Office Store also contains apps created by developers outside of Microsoft — apps that work with Word and Excel. The developer can choose to charge for an app or make it available for free.

Download Apps from the Office Store

Install an App

① Click the **Insert** tab.

② Click **Apps for Office**.

The Insert App dialog box appears, displaying the My Apps tab of currently installed apps.

A You can click **Featured Apps** to view apps you may find interesting. If you browse through featured apps and do not find what you need, click **More apps**.

③ Click **Office Store**.

The Office Store web page appears.

④ Search for apps using the search box at the top of the page or simply scroll down to find and click the app you want to add.

The web page describing the app appears.

Note: This section adds the Merriam-Webster Dictionary app to Word

(and Excel) as an example.

B You can read the information about the app.

C The price of the app appears here.

5 Click Add.

A web page appears, asking you to sign in to the Office Store using your Microsoft account.

The screenshot shows the Microsoft Office Store sign-in page. On the left, there's a sidebar for 'Office Store' with a 'Merriam-Webster Dictionary' app listed. The main area is titled 'sign in' and contains fields for 'Microsoft account' (with placeholder 'someone@example.com') and 'Password'. A red circle labeled '6' points to the email input field. A red circle labeled '7' points to the 'Sign in' button. Below the sign-in form are links for 'Can't access your account?' and 'Sign in with a single-use code'. At the bottom of the page are copyright notices and links for 'Help Center' and 'Feedback'.

6 Fill in the login information.

7 Click **Sign in**.

A web page appears, asking you to confirm that you want to add the app.

The screenshot shows a 'Purchase experience - Office' page. It displays the 'Merriam-Webster Dictionary' app information and a confirmation message: 'Confirm that you wish to add the app'. Below it, a link says 'Choose Continue to add this app for Office to your account.' A red circle labeled '8' points to the green 'Continue' button at the bottom right. The Microsoft logo and copyright notice are at the bottom of the page.

8 Click **Continue**.

What should I do for add-ins for other Office 2013 programs?

OneNote, PowerPoint, and Publisher use the Add-Ins pane of the Options dialog box, as they did in earlier editions of Office, to manage add-ins. For dictionary look-ups, these programs and Outlook use the same Research pane that appears in earlier editions of Office. To display the Research pane, click the **Review** tab (in Outlook, pop out a reply or a forward message window and the Review tab becomes visible), and then click **Research**. Available research sources appear in a list in the pane. Access manages its add-ins using the Add-In Manager, available from the Database Tools tab.

When you need an app for Microsoft Word or Excel, you go to the Office Store. You visit the Office Store from within the program to review available apps. You then choose, buy if necessary, download, and install apps that interest you.

After you finish installing an app that you download from the Office Store, you must, in most cases, activate the app so that you can use it in Microsoft Word or Excel. This section describes how to activate the Merriam-Webster Dictionary app and then use it in Word to look up definitions of words.

Download Apps from the Office Store

Wait. There's more to do to find your app:

Go to Word

1. Go to the "Insert" tab
2. Click the "Apps for Office" button
3. Go to "MY APPS"
4. Select your app
5. Click "Insert"

Another web page appears, providing directions to activate the app.

Activate the Dictionary App

- ① In Word or Excel, click the **Insert** tab.
- ② Click **Apps for Office**.

Note: If you click ▾ on the bottom of the Apps for Office button, click **See All**.

The Insert App dialog box appears, displaying the My Apps page, and the app you downloaded appears.

Apps for Office

MY APPS | FEATURED APPS

Manage My Apps | Refresh

Dictionary - Merriam-...
Merriam-Webster Inc.

3

Dictionary - Merriam-Webster
Merriam-Webster Inc.

4

Insert

Cancel

- 3 Click the app.
- 4 Click **Insert**.

The app loads. For the Merriam-Webster Dictionary app, a pane opens on the right side of the Word screen, enabling you to type a word to look up.

TIPS

Do I need to keep the Merriam-Webster Dictionary pane open all the time to use the dictionary?

No. Click in the pane to close it. See Chapter 8 to learn how to use the thesaurus and dictionary.

If I decide I no longer want an app that I previously downloaded, can I remove it?

Yes. Click the **Insert** tab and then click **Apps for Office**. In the dialog box that appears, click the **Manage My Apps** link in the upper-right corner. A web page opens, showing your installed apps; you can click **Hide** beside any app to remove it.

Sign In to SkyDrive

You can use your SkyDrive and Office 2013 programs to work from any location in the world on any trusted device. SkyDrive offers you online storage from Microsoft. With Office 2013, you automatically receive a small amount of storage space for free and you can rent additional storage space for a nominal fee.

You use a browser and a Microsoft Account to sign into SkyDrive. Once you have signed in to SkyDrive, you can use Office Web Apps to open and edit documents. Office 2013 technology synchronizes documents stored in your SkyDrive with documents stored on trusted devices.

Sign In to SkyDrive

- 1 Open your browser.
- 2 In the address bar, type skydrive.com and press **Enter**.

https://login.live.com/login.srf?ws=wsigninl Microsoft Corporation Sign in to your Microsoft account

You are redirected to the SkyDrive sign-in page.

- ❸ Type the e-mail address associated with your Microsoft Account.
- ❹ Type your Microsoft Account password.
- ❺ Click **Sign in**.

The screenshot shows the Microsoft SkyDrive web interface. On the left, a sidebar lists 'Recent docs', 'Shared', 'Groups', 'PCs', and the computer name 'WIN-KGL96DFUJN'. The main area displays a grid of three items: 'Documents' (6 files), 'Pictures' (0 files), and 'Public' (0 files). At the bottom of the sidebar, there are links for '6.99 GB available', 'Recycle bin', 'Manage storage', and 'Get SkyDrive apps'. The footer contains copyright information: '© 2012 Microsoft. Terms Privacy Developers Report abuse English (United States)'. The URL in the address bar is 'https://skydrive.live.com/'.

Your SkyDrive appears.

TIP

How do I sign out of SkyDrive?

Click your name (A) and then click Sign out (B).

Using a Web App in SkyDrive

From SkyDrive, you can use Office Web Apps to open and edit Office documents with the same basic editing tools you use in the Office program.

While you cannot create or use macros, you can use these editing tools to perform basic functions in each Office program. For example, in the Word Web App, you can apply character and paragraph formatting, such as bold or italics, and you can align text. You can change margins, insert a table or a picture stored on the local drive, and add clip art available from Microsoft's Clip Art collection.

Using a Web App in SkyDrive

Open the Document

- 1 Sign in to SkyDrive at <https://skydrive.live.com>.

- 2 Open the folder containing the document you want to open.

3 Click the document.

The "Give Me Liberty or Give Me Death" Speech

*By Patrick Henry,
Delivered on March
23, 1775, before the
Second
Revolutionary
Convention of
Virginia, in the old
church in
Richmond.*

NO man thinks more highly than I do of the patriotism, as well as abilities, of the very worthy gentlemen who have just addressed the House. But different men often see the same subject in different lights; and, therefore, I hope it will not be thought disrespectful to those gentlemen, if, entertaining as I do opinions of a character very opposite to theirs, I shall speak forth my sentiments freely and without reserve. This is no time for ceremony.

The question before the House is one of awful moment to this country. For my own part, I consider it as nothing less than a question of freedom or slavery; and in proportion to the magnitude of the subject ought to be the freedom of the debate. It is only in this way that we can hope to arrive at truth, and fulfil the great responsibility which we hold to God and our country. Should I keep back my opinions at such a time, through fear of giving offense, I

A The Ribbon contains only a few tabs.

TIPS

How do I save my work in a Web App?

The answer depends on the Web App. Excel, PowerPoint, and OneNote automatically save changes as you work. In the Word Web App, you click the **File** tab and then click **Save**. Publisher and Access do not have corresponding Web Apps; instead, the appropriate Office program opens when you open one of these file types from SkyDrive.

How do I close a document I opened in the cloud?

Click the **File** tab and then click **Exit**. Your browser reappears, showing the SkyDrive contents of the folder containing the document you opened.

Using an Office Program from SkyDrive

Using Office 2013, you can work from anywhere. For example, suppose you work on a document from your SkyDrive and discover that you need tools not available in the Web App. If Office 2013 is installed on the computer, you can use SkyDrive tools to open the file in the appropriate Office program.

If Office 2013 is *not* installed on the computer *and* you have a subscription to Office 2013, SkyDrive can open the Office program you need. In just a few seconds, SkyDrive installs it on the computer you currently use. When you close the program, SkyDrive uninstalls it.

Using an Office Program from SkyDrive

The screenshot shows a Microsoft Excel Web App window. At the top, there's a navigation bar with 'File', 'Home', 'Insert', 'View', and a 'OPEN IN EXCEL' button highlighted with a red circle and the number '2'. Below the navigation bar is a ribbon with tabs like 'Paste', 'Cut', 'Copy', 'Format', 'Merge & Center', 'Number', 'Table', 'Insert', 'Delete', 'AutoSum', 'Cells', 'Formulas', 'Data', 'Find', 'Share', and 'Web'. The main area contains a table with columns 'Company', 'Industry', 'Q1 Sales', and 'Q2 Sales'. A chart titled 'Quarterly Sales' is embedded in the table, showing horizontal bars for each company's Q1 and Q2 sales. The chart has categories on the y-axis and sales values on the x-axis.

- ① Open a document and edit it using a Web App.

Note: See the previous section, “Using a Web App in SkyDrive,” for details.

Note: This section uses an Excel workbook as an example.

- ② Click **Open In Excel**.

A security dialog box appears.

- ③ Click **Yes**.

Screenshot of Microsoft Excel 2013 showing a table of quarterly sales data and a corresponding horizontal bar chart titled "Quarterly Sales".

The table has columns: Company, Industry, Q1 Sales, and Q2 Sales.

	Company	Industry	Q1 Sales	Q2 Sales
1	A. Datum Corporation	Tech	\$ 195,449	\$ 746,907
2	Adventure Works	Travel	\$ 123,721	\$ 733,396
3	Blue Yonder Airlines	Travel	\$ 934,763	\$ 246,554
4	City Power & Light	Utilities	\$ 299,293	\$ 674,295
5	Coho Vineyard	Beverage	\$ 228,783	\$ 659,385
6	Contoso, Ltd.	Misc	\$ 239,219	\$ 287,999
7	Contoso Pharmaceuticals	Medical	\$ 371,570	\$ 644,368
8	Consolidated Messenger	Tech	\$ 579,825	\$ 448,399
9	Fabrikam, Inc.	Utilities	\$ 639,630	\$ 635,474

Q2 Sales Q1 Sales

The file opens in the appropriate Office program.

Note: As long as the file is open in the Office desktop application, you cannot edit it using the web app, but you can view it.

TIP

What happens when I close the Office program?

Save your document in the Office program as usual; the changes you made are automatically uploaded to your SkyDrive. In addition, if the program streamed to your computer using your Office 2013 subscription, SkyDrive uninstalls the program. When you return to your browser where SkyDrive is open, this message box appears. Click **My document opened successfully, close Excel Web App (A)** to dismiss

it.

Upload a Document to SkyDrive

You can upload any document from your computer to your SkyDrive at any time. By default, Office 2013 saves all documents to the SkyDrive folder on your computer and then, in the background, synchronizes the contents of the SkyDrive folder with your SkyDrive.

But suppose that you sign out of Office Online and choose to save documents locally on your computer. For example, if you then find that you need a document on your SkyDrive to edit while you travel, you can place a document into your SkyDrive folder on your computer and then use the SkyDrive app to upload the document.

Upload a Document to SkyDrive

- 1 Sign in to SkyDrive using your browser.

Note: See the section “Sign In to SkyDrive” for details.

2 Click to display the folder where you want to place the document.

3 Click **Upload**.

The Choose File to Upload dialog box appears.

- ④ Navigate to the folder containing the file you want to upload.
- ⑤ Click the file.
- ⑥ Click **Open**.

A The file appears in your SkyDrive.

TIP

What can I do if I forgot to upload a file I need to use remotely?

You can access your PC remotely by downloading and installing SkyDrive for Windows. The SkyDrive app you get through Office 2013 is a scaled-down version of SkyDrive for Windows. To download SkyDrive for Windows, sign in to your SkyDrive account using your browser. In the SkyDrive Navigation pane, click **PCs** (A) and follow the instructions.

Share a Document Using SkyDrive

You can use the SkyDrive app to share a document stored on your SkyDrive. Suppose that you finish the work on a document from your SkyDrive and you are ready for others to review it. You do not need to use the Office program installed on your local computer to invite others to review the document; you can use commands available in SkyDrive.

SkyDrive offers three ways to share a document: you can send the document by e-mail, share it using a social media service of your choice, or send a link to the document on your SkyDrive.

Share a Document Using SkyDrive

Open a Document to Share

- ➊ In SkyDrive, open the document you want to share.
- ➋ Click Share.

The Share dialog box appears, suggesting that you share by e-mail.

Note: Follow the steps in one of the following subsections to share the document.

Share via E-Mail

- ➊ Fill in the e-mail address of the person with whom you want to share

the document.

A You can include a personal message here.

② Click Share.

E-mail messages are sent to the recipients you supplied, providing a link that enables them to view the document in a Web App.

Share via Social Media

① Click Post to.

② Click here to add your social media services as needed.

③ Follow the on-screen directions.

④ Click Post.

Share via a Link

① Click **Get a link**.

② Determine the type of link you want and click its associated button.

Note: This example shows a View Only link.

A link is generated; provide this link to anyone with whom you want to share the document.

③ Click **Done**.

TIP

How do I stop sharing a document?

Open the document and click **Share**. A window like this one appears. Click **x** beside each type of link you want to remove (A). Then, click **Done** (B).

Part II: Word

You can use Word to tackle any project involving text, such as correspondence, reports, and more. Word's versatile formatting features enable you to easily enhance your text documents and add elements such as tables or headers and footers. In this part, you learn how to build and format Word documents and tap into Word's tools to review and proofread your documents.

The screenshot shows a Microsoft Word document window. The title bar reads "MINUTES-changes tracked.docx - Word". The ribbon menu is visible with tabs like FILE, HOME, DESIGN, PAGE LAYOUT, REFERENCES, MAILINGS, REVIEW, and VIEW. The HOME tab is selected. The ribbon also shows the user's name, Elaine Marmel, and icons for Find, Replace, Select, and Editing. The main content area contains the word "MINUTES" in large, bold, gray capital letters. Below it is the heading "West School PTA Minutes" and the date "September 24, 2012". A paragraph states, "The meeting was called to order by Terry Adams at 7:00 p.m." A section titled "In attendance" [List attendees] follows. Another section titled "Approval of Minutes" states, "The minutes were read from the August meeting and approved." A section titled "Board" discusses the introduction of new principal and guests, mentioning Kim Abercrombie's nomination as Secretary. A comment from Elaine Marmel on this section says, "Terry, I made some sentence structure changes to make this information easier to understand." A section titled "Advisory Committee" lists parent openings and committee members, with a comment from Elaine Marmel saying, "Looks good!" A section titled "Budget" discusses the distribution of the budget to the board and PTA members, with a comment from Elaine Marmel saying, "Looks good!" The status bar at the bottom shows "PAGE 1 OF 2 241 WORDS" and "120%".

[Chapter 6: Formatting Text](#)

[Chapter 7: Adding Extra Touches](#)

[Chapter 8: Reviewing Documents](#)

Chapter 5: Adding Text

Change Word's Views

You can control how you view your Word document in several ways. For example, you can use the Zoom feature to control the magnification of your document with either the Zoom slider or the Zoom buttons. You can even zoom an image separately from your document.

You can also choose from five different views: Print Layout, which displays margins, headers, and footers; Outline, which shows the document's outline levels; Web Layout, which displays a web page preview of your document; Read Mode, which optimizes your document for easier reading; and Draft, which omits certain elements such as headers and footers.

Change Word's Views

Using the Zoom Tool

- 1 Drag the **Zoom** slider on the Zoom bar.

A You can also click a magnification button to zoom in or out.

B Click here to display the Zoom dialog box and precisely control zooming.

C Word magnifies the document, and the degree of magnification appears here.

Switch Layout Views

The screenshot shows the Microsoft Word ribbon with the 'View' tab highlighted by a red circle labeled '1'. A red arrow labeled '2' points to the 'Read Mode Layout' button in the 'View' tab's 'Layout' group. The main document area displays the Gettysburg Address, and a large eagle watermark is overlaid on the text.

1 Click the **View** tab on the Ribbon.

2 Click a layout view button.

Word displays a new view of the document.

In this example, Read Mode view helps you focus on reading a document. See Chapter 8 for details on Read Mode.

The screenshot shows the Microsoft Word ribbon with the 'View' tab selected. The main document area displays the Gettysburg Address in a clean, readable layout. A large eagle watermark is overlaid on the text. Navigation arrows are visible at the bottom of the page.

D You can also switch views using the View buttons at the bottom of the program window.

TIP

How can I zoom an image?

While in Read Mode view, double-click an image. Word enlarges the image and displays a zoom arrow () in the upper-right corner of the image. When you click the zoom arrow, the image enlarges to fill your screen. You can click the zoom arrow again to return to the first zoom level, or you can press **Esc** or click anywhere outside the image to return to Read Mode. See Chapter 8 for more on Read Mode.

Type and Edit Text

You can use Word to quickly type and edit text for a letter, memo, or report. By default, Word is set to Insert mode; when you start typing, any existing text moves over to accommodate the new text. If you have set up Word to toggle between Insert mode and Overtype mode, you can press **Insert** to switch to Overtype mode. In Overtype mode, the new text overwrites the existing text.

Word makes typing easy; you do not need to worry about when to start a new line within a paragraph and you can easily start new paragraphs and delete text.

Type and Edit Text

Type Text

1 Start typing your text.

A At the end of a line, Word automatically starts a new line, wrapping

text to the next line for you.

B The insertion point marks your location in the document and moves to the right as you type. Text you type appears to the left of the insertion point.

2 Press **Enter** to start a new paragraph.

C You can press **Enter** twice to add an extra space between paragraphs.

D You can press **Shift+Enter** to insert a line break and start a new line when your text does not fill the line. You often use line breaks when typing addresses.

E You can press **Tab** to quickly indent the first line of text in a paragraph.

Edit Text

F If you make a spelling mistake, Word either corrects the mistake as you type or underlines it in red.

- 1 Click to the right of a mistake in a document.
- 2 Press **Backspace** to delete characters to the left of the insertion point.

3 Click to the left of a mistake in a document.

4 Press **Delete** to delete characters to the right of the insertion point.

Note: You can delete larger quantities of text by selecting the text and pressing **Delete**.

TIP

What is the difference between the Insert and Overtype modes?

By default, Word is set to Insert mode so that, when you click to place the insertion point and start typing, any existing text moves to the right to accommodate new text. In Overtype mode, new text overwrites existing text. To toggle between these modes, enable **Insert** and then press it. To enable **Insert**, click the **File** tab, click **Options**, and click the **Advanced** tab in the window that appears. Under Editing Options, select **Use the Insert key to control Overtype mode** (changes to) and then click **OK**.

Insert Quick Parts

Suppose you repeatedly type the same text in your documents — for example, your company name. You can add this text to the Quick Part Gallery in Word; then, the next time you need to add the text to a document, you can select it from the gallery instead of retyping it.

In addition to creating your own Quick Parts for use in your documents, you can use any of the wide variety of preset phrases included with Word. You access these preset Quick Parts from the Building Blocks Organizer window. (See the tip at the end of this section for more information.)

Insert Quick Parts

Create a Quick Parts Entry

- 1 Type the text that you want to store, including all formatting that should appear each time you insert the entry.
- 2 Select the text you typed.

3 Click the **Insert** tab.

4 Click the **Quick Parts** button ().

5 Click **Save Selection to Quick Part Gallery**.

The Create New Building Block dialog box appears.

6 Type a name that you want to use as a shortcut for the entry.

A You can also assign a gallery, a category, and a description for the entry.

7 Click **OK**.

Word stores the entry in the Quick Part Gallery.

Insert a Quick Part Entry

① Click in the text where you want to insert a Quick Part.

② Click the **Insert** tab.

③ Click the **Quick Parts** button ().

All building blocks you define as Quick Parts appear in the Quick Part Gallery.

④ Click the entry that you want to insert.

B Word inserts the entry into the document.

TIPS

How do I insert a preset Quick Part?

Click the **Insert** tab on the Ribbon, click the **Quick Parts** button (), and click **Building Blocks Organizer** to open the Building Blocks Organizer. Locate the Quick Part you want to insert (they are organized into galleries and categories), click it, and click **Insert**.

How do I remove a Quick Parts entry?

To remove a Quick Parts entry from the Building Blocks Organizer, open the Organizer (see the preceding tip for help), locate and select the entry you want to remove, click **Delete**, and click **Yes** in the dialog box that appears.

Insert Symbols

From time to time, you might need to insert a mathematical symbol or special character into your Word document. From the Symbol Gallery, you can insert many common symbols, including mathematical and Greek symbols, architectural symbols, and more.

If you do not find the symbol you need in the Symbol Gallery, you can use the Symbol dialog box. The Symbol dialog box displays a list of recently used symbols as well as hundreds of symbols in a variety of fonts. You can also use the Symbol dialog box to insert special characters.

Insert Symbols

- 1 Click the location in the document where you want the symbol to appear.

② Click the Insert tab.

③ Click Symbol.

A A gallery of commonly used symbols appears. If the symbol you need appears in the gallery, you can click it and skip the rest of these steps.

④ Click More Symbols.

The Symbol dialog box appears.

⑤ Click to select the symbol's font.

The available symbols change to match the font you selected.

B You can click **▲** and **▼** to scroll through available symbols.

6 Click a symbol.

7 Click **Insert**.

C The symbol appears at the current insertion point location in the document.

Note: You can control the size of the symbol the same way you control the size of text; see Chapter 6 for details on sizing text.

The dialog box remains open so that you can add more symbols to your document.

8 When finished, click **Close**.

TIP

How do I add a special character?

To add a special character, open the Symbol dialog box and click the

Special Characters tab. Locate and click the character you want to add, and then click **Insert**. Click **Close** to close the dialog box.

Create a Blog Post

If you keep an online blog, you can use Word to create a document to post on it. This enables you to take advantage of the many proofing and formatting tools that are available in Word. You can then post the blog entry directly from Word.

To post your blog entry, you must first set up Word to communicate with the Internet server that hosts your online blog; the first time you post a blog entry from Word, the program prompts you to register your blog account. Click **Register Now**, choose your blog provider in the dialog box that appears, and follow the on-screen prompts.

Create a Blog Post

Note: You must be connected to the Internet to complete this section.

- 1 Click the **File** tab.

- 2 Click **New**.

3 Click Blog post.

Word opens the blog post document.

Note: The first time you use the blog feature, Word prompts you to register your blog account. Click **Register Now**, choose your blog provider in the dialog box that appears, and follow the on-screen prompts.

A You can use the buttons in the Blog group to manage blog entries. For example, you can click **Manage Accounts** to set up blog accounts.

B You can use the tools in the other Ribbon groups to format text as you type.

4 Click the Insert tab.

C Use these buttons to incorporate tables, pictures, clip art, shapes, graphics, screenshots, WordArt, symbols, and hyperlinks in a blog entry.

- ⑤ Click here and type a title for your blog entry.
- ⑥ Click here and type your entry.
- ⑦ Click the **Blog Post** tab.

Note: You can save your blog entry on your hard drive the same way you save any document.

8

8 Click Publish.

Word connects to the Internet, prompts you for your blog username and password, and posts your entry.

A message appears above the blog entry title, identifying when the entry was posted.

TIPS

Can I edit my blog accounts from within Word?

Yes. Click the **Manage Accounts** button on the Blog Post tab when viewing a blog page in Word to open the Blog Accounts dialog box. Here, you can edit an existing account, add a new account, or delete an account that you no longer use.

Can I post entries as drafts to review them before making them visible to the public?

Yes. Click ▾ on the bottom of the **Publish** button and click **Publish as Draft**. When you are ready to let the public view your entry, open it in

Word and click **Publish**.

Chapter 6: Formatting Text

Change the Font, Size, and Color

By default, when you type text in a Word 2013 document, the program uses an 11-point Calibri font. You can change font — also called the *typeface* — text size, and color to alter the appearance of text in a document. For example, you might change the font, size, and color of your document's title text to emphasize it. In addition, you can use Word's basic formatting commands — Bold, Italic, Underline, Strikethrough, Subscript, and Superscript — to quickly add formatting to your text. And, you can change the font that Word 2013 applies by default for the body of a document.

Change the Font, Size, and Color

Change the Font

1 Select the text that you want to format.

A If you drag to select, the Mini toolbar appears faded in the background, and you can use it by moving ↗ toward the Mini toolbar.

② To use the Ribbon, click the **Home** tab.

③ Click the **Font** ▾ to display the font.

Note: Word displays a sample of the selected text in any font at which you point the mouse.

④ Click the font you want to use.

B Word assigns the font to the selected text.

You can click anywhere outside the selection to continue working.

Change the Size

1 Select the text that you want to format.

C If you drag to select, the Mini toolbar appears faded in the background, and you can use it by moving ↗ toward the Mini toolbar.

2 To use the Ribbon, click the **Home** tab.

3 Click the **Font Size** ▾.

Note: Word displays a sample of the selected text in any font size at which you point the mouse.

④ Click a size.

D Word changes the size of the selected text.

This example applies a 24-point font size to the text.

Note: You also can change the font size using the **Grow Font** and **Shrink Font** buttons (A^+ and A^-) on the Home tab. Word increases or decreases the font size with each click of the button.

You can click anywhere outside the selection to continue working.

TIPS

How do I apply formatting to my text?

To apply formatting to your text, select the text you want to format, click the **Home** tab, and click the **Bold** (B), **Italic** (I), **Underline** (U), **Strikethrough** (abc), **Subscript** (H), or **Superscript** (x) button.

What is the toolbar that appears when I select text?

When you select text, the Mini toolbar appears, giving you quick access to common formatting commands. You can also right-click selected text to display the toolbar. To use any of the tools on the toolbar, simply click the desired tool; otherwise, continue working, and the toolbar disappears.

Changing the text color can go a long way toward emphasizing it on the page. For example, if you are creating an invitation, you might make the description of the event a different color to stand out from the other details. Likewise, if you are creating a report for work, you might make the title of the report a different color from the information contained in the report, or even color-code certain data in the report. Obviously, when selecting text colors, you should avoid choosing colors that make your text difficult to read.

Change the Font, Size, and Color

Change the Color

- 1 Select the text that you want to format.

A If you drag to select, the Mini toolbar appears faded in the background, and you can use it by moving ↗ toward the Mini toolbar.

② To use the Ribbon, click the **Home** tab.

③ Click ▾ next to the **Font Color** button (A -) and point the mouse at a color.

B Word displays a sample of the selected text.

④ Click a color.

Word assigns the color to the text.

This example applies a blue color to the text.

You can click anywhere outside the selection to continue working.

Using the Font Dialog Box

- 1 Select the text that you want to format.
 - 2 Click the **Home** tab on the Ribbon.
 - 3 Click the dialog box launcher (in the Font group.
- The Font dialog box appears.
- 4 Click the font, style, size, color, underline style, or effect that you want to apply.
 - C A preview of your choices appears here.
 - 5 Click **OK**.

2013-Dangers of a Salaried Bureaucracy by Benjamin Franklin.docx - Word

Draft Mammal

Font Paragraph Styles Editing

DANGERS OF A SALARIED BUREAUCRACY

D Delivered by Benjamin Franklin in Philadelphia in the Constitutional Convention of 1787

IT is with reluctance that I rise to express a disapprobation of any one article of the plan for which we are so much obliged to the honorable gentlemen who laid it before us. From its first reading I have borne a good will to it, and, in general, wished it success. In this particular of salaries to the executive branch, I happen to differ; and, as my opinion may appear new and chimerical, it is only from a persuasion that it is right, and from a sense of duty, that I hazard it. The committee will judge of my reasons when they have heard them, and their judgment may possibly change mine. I think I see inconveniences in the appointment of salaries; I see none in refusing them, but, on the contrary, great advantages.

Sir, there are two passions which have a powerful influence in the affairs of men. These are ambition and avarice—the love of power and the love of money. Separately, each of these has great force in prompting men to action; but, when united in view of the same object, they have, in many minds, the most violent effects. Place before the eyes of such men a post of honor, that shall, at the same time, be a place of profit, and they will move heaven and earth to obtain it. The vast number of such places it is that renders the British government so tempestuous. The struggles for them are the true source of all

PAGE 1 OF 3 12 OF 1437 WORDS

D Word applies the font change.

TIP

Can I change the default font and size?

Yes. To change the default font and size, follow these steps. Display the Font dialog box. Click the font and font size that you want to set as defaults. Click the **Set As Default** button. A new dialog box appears. Specify whether the change should apply to this document only or to all documents created with the current template. Click **OK**, and click **OK** again to close the Font dialog box. The next time you create a new document, Word applies the default font and size that you specified.

Align Text

You can use Word's alignment commands to change how text and objects are positioned horizontally on a page. By default, Word left-aligns text and objects. You can also choose to center text and objects on a page (using the Center command), align text and objects to the right side of the page (using the Right Align command), or justify text and objects so that they line up at both the left and right margins of the page (using the Justify command). You can change the alignment of all the text and objects in your document or change the alignment of individual paragraphs and objects.

Align Text

- 1 Click anywhere in the paragraph that you want to align or select the paragraphs and objects that you want to align.
- 2 Click the **Home** tab.
- 3 Click an alignment button.

The **Align Left** button (≡) aligns text with the left margin, the **Center** button (≡), centers text between the left and right margins, the **Align Right** button (≡) aligns text with the right margin, and the **Justify** button (≡) aligns text between the left and right margins.

Word aligns the text.

- A** This text is aligned with the left margin.
- B** This text is centered between both margins.
- C** This text is aligned with the right margin.
- D** This text is justified between both margins.

Set Line Spacing

You can adjust the amount of spacing that appears between lines of text in your paragraphs. You might set 2.5 spacing to allow for handwritten edits in your printed document, or 1.5 spacing to make paragraphs easier to read. By default, Word assigns 1.08 spacing for all new documents.

You can also control how much space appears before and after each paragraph in your document. For example, you might opt to single-space the text within a paragraph, but to add space before and after the paragraph to set it apart from the paragraphs that precede and follow it.

Set Line Spacing

- 1 Click anywhere in the paragraph that you want to format.

Note: To format multiple paragraphs, select them.

- 2 Click the **Home** tab.

- 3 Click the **Line Spacing** button ().

4 Click a line spacing option.

A Word applies the new spacing.

This example applies 2.0 line spacing.

5 To control the spacing that surrounds a paragraph, click the dialog box launcher () in the Paragraph group.

The Paragraph dialog box opens.

6 Use the **Before** spin arrow (+) to specify how much space should appear before the paragraph.

7 Use the **After** to specify how much space should appear after the paragraph.

8 Click **OK** to apply the spacing settings.

Indent Text

You can use indents as a way to control the horizontal positioning of text in a document. Indents are simply margins that affect individual lines or paragraphs. You might use an indent to distinguish a particular paragraph on a page — for example, a long quote.

You can indent paragraphs in your document from the left and right margins. You also can indent only the first line of a paragraph or all lines *except* the first line of the paragraph. You can set indents using buttons on the Ribbon, the Paragraph dialog box, and the Word ruler.

Indent Text

Set Quick Indents

- ① Click anywhere in the paragraph you want to indent.
- ② Click the **Home** tab on the Ribbon.
- ③ Click an indent button.

A You can click the **Decrease Indent** button (⬅) to decrease the indentation.

B You can click the **Increase Indent** button (➡) to increase the indentation.

C Word applies the indent change.

Set Precise Indents

1 Click anywhere in the paragraph you want to indent or select the text you want to indent.

2 Click the **Home** tab on the Ribbon.

3 Click the dialog box launcher (in the Paragraph group.

The Paragraph dialog box appears.

④ Type a specific indentation in the **Left** or **Right** indent text boxes.

D You can also click a spin arrow (↑ ↓) to set an indent measurement.

E To set a specific kind of indent, you can click the **Special** ▾ and then click an indent.

F The Preview area shows a sample of the indent.

⑤ Click **OK**.

Word applies the indent to the text.

TIP

How do I set indents using the Word ruler?

The ruler contains markers for changing the left indent, right indent, first-line indent, and hanging indent. Click the **View** tab and select **Ruler** (□ changes to ▾) to display the ruler. On the left side of the ruler, drag the **Left Indent** button (□) to indent all lines from the left margin, drag the **Hanging Indent** button (△) to create a hanging indent, or drag the **First Line Indent** button (▽) to indent the first line only. On the right side of the ruler, drag the **Right Indent** button (△) to indent all lines from the right margin.

Set Tabs

You can use tabs to create vertically aligned columns of text in your Word document. To insert a tab, simply press **Tab** on your keyboard; the insertion point moves to the next tab stop on the page.

By default, Word creates tab stops every 0.5 inches across the page and left-aligns the text on each tab stop. You can set your own tab stops using the ruler or the Tabs dialog box. You can also use the Tabs dialog box to change the tab alignment and specify an exact measurement between tab stops.

Set Tabs

Set Quick Tabs

- ① Click the **View** tab.
- ② Select **Ruler** (changes to) to display the ruler.
- ③ Click here until the type of tab marker that you want to set appears.

- sets a left-aligned tab.
- sets a center-aligned tab.
- sets a right-aligned tab.
- sets a decimal tab.

sets a bar tab (displays a vertical bar at the tab location).

- ④ Select the lines to which you want to add the tab.
- ⑤ Click the ruler at the tab location you want.

On each selected line, Word adds a tab at the location you clicked.

- ⑥ Click at the end of the text after which you want to add a tab.
- ⑦ Press **Tab**.
- ⑧ Type the text that should appear in the next column.

Set Precise Tabs

- 1 Select the lines to which you want to add the tab.
- 2 Click the **Home** tab on the Ribbon.
- 3 Click the dialog box launcher (in the Paragraph group. The Paragraph dialog box appears.
- 4 Click **Tabs** on the Indents and Spacing tab. The Tabs dialog box appears.

5 Click here and type a new tab stop measurement.

6 Select a tab alignment (changes to).

A You can also select a tab leader character (changes to).

7 Click Set.

Word saves the new tab stop.

8 Click OK.

B Word closes the dialog box, and you can use the new tab stops.

TIPS

Can I remove tab stops that I no longer need?

Yes. To remove a tab stop from the ruler, drag the tab stop off of the ruler. To remove a tab stop in the Tabs dialog box, select it, and then click Clear. To clear every tab stop that you saved in the Tabs dialog box, click Clear All.

What are leader tabs?

You can use leader tabs to separate tab columns with dots, dashes, or lines. Leader tabs help readers follow the information across tab columns. You can set leader tabs using the Tabs dialog box, as shown in this section.

Set Margins

By default, Word assigns a 1-inch margin all the way around the page in every new document that you create. However, you can change these margin settings. For example, you can set wider margins to fit less text on a page, or set smaller margins to fit more text on a page. You can apply your changes to the current document only, or make them the new default setting, to be applied to all new Word documents you create. When you adjust margins, Word sets the margins from the position of the insertion point to the end of the document.

Set Margins

Set Margins Using Page Layout Tools

- 1 Click anywhere in the document or section where you want to change margins.
- 2 Click the **Page Layout** tab on the Ribbon.
- 3 Click **Margins**.

The Margins Gallery appears.

4 Click a margin setting.

A Word applies the new setting.

Set a Custom Margin

The Speech at Gettysburg, Pennsylvania

By Abraham Lincoln. Delivered on November 19, 1863

and seven years ago our fathers brought forth upon this continent a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal.

ngaged in a great civil war, testing whether that nation, or any nation so dedicated, can long endure. We are met on a great battle-field of that war. e to dedicate a portion of that field as a final resting-place for those who here gave their lives that that nation might live. It is altogether fitting and proper that we should do this.

But in a larger sense, we can not dedicate—we can not consecrate—we can not hallow this ground. The brave men, living and dead, who struggled here, have consecrated it far above our poor power to add or detract. The world will little note, nor long remember, what we say here, but it can never forget what they did here. It is for us, the living, rather, to be dedicated here to the unfinished work which they who fought here thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave

① Click the **Page Layout** tab on the Ribbon.

② Click **Margins**.

The Margins Gallery appears.

③ Click **Custom Margins**.

The Page Setup dialog box appears, displaying the Margins tab.

④ Type a specific margin in the **Top**, **Bottom**, **Left**, and **Right** boxes.

B You can also click a spin arrow (↑) to set a margin measurement.

⑤ Choose a page orientation.

C Preview the margin settings here.

⑥ Click **Apply to** and specify whether the margin should apply to the whole document or from this point forward.

⑦ Click **OK**.

Word immediately adjusts the margin in the document.

TIPS

How do I set new default margins?

To establish a different set of default margins for every new document that you create, make the desired changes to the Margins tab of the Page Setup dialog box, and click **Set As Default** before clicking **OK**.

Why is my printer ignoring my margin settings?

Some printers have a minimum margin setting and, in most cases, that minimum margin is .25 inches. If you set your margins smaller than your printer's minimum margin setting, you place text in an unprintable area. Be sure to test the margins, or check your printer documentation for more information.

Create Lists

You can draw attention to lists of information by using bullets or numbers. Bulleted and numbered lists can help you present your information in an organized way. A bulleted list adds dots or other similar symbols in front of each list item, whereas a numbered list adds sequential numbers or letters in front of each list item. As a general rule, use bullets when the items in your list do not follow any particular order and use numbers when the items in your list follow a particular order.

You can create a list as you type it or after you have typed list elements.

Create Lists

Create a List as You Type

- ① Type **1.** to create a numbered list or **18** to create a bulleted list.
- ② Press **Spacebar** or **Tab**.

A Word automatically formats the entry as a list item and displays the AutoCorrect Options button (A) so that you can undo or stop automatic numbering.

③ Type a list item.

④ Press Enter to prepare to type another list item.

B Word automatically adds a bullet or number for the next item.

⑤ Repeat Steps 3 and 4 for each list item.

To stop entering items in the list, press Enter twice.

Create a List from Existing Text

- ① Select the text to which you want to assign bullets or numbers.
 - ② Click the **Home** tab.
 - ③ Click the **Numbering** button (■) or the **Bullets** button (■).
- This example uses bullets.

Aunt Mamie's Helpful Hints

Do you have any of the following stains on your carpet?

C • Alcohol
• Blood
• Wine
• Cigarette burns
• Stains from pets

Don't worry. *Aunt Mamie's Helpful Hints* contains tips and tricks you can use to clean up these stains and more. This amazing pamphlet-style book will help you make your carpet look like nobody has ever used it.

C Word applies numbers or bullets to the selection.

④ Click anywhere outside the selection to continue working.

TIP

Can I create a bulleted or numbered list with more than one level, like the type of list you use when creating an outline?

Yes. Click the **Multilevel List** button (A). Click a format (A) from the menu that appears and then type your list. You can press **Enter** to enter a new list item at the same list level. Each time you press **Tab**, Word indents a level in the list. Each time you press **Shift+Tab**, Word outdents a level in the list.

Copy Formatting

Suppose you have applied a variety of formatting options to a paragraph to create a certain look — for example, you changed the font, the size, the color, and the alignment. If you want to re-create the same look elsewhere in the document, you do not have to repeat the same steps as when you applied the original formatting, again changing the font, size, color, and alignment. Instead, you can use the Format Painter feature to “paint” the formatting to the other text in one swift action. With the Format Painter feature, copying formatting is as easy as clicking a button.

Copy Formatting

- ① Select the text containing the formatting that you want to copy.
- A If you drag to select, the Mini toolbar appears in the background, and you can use it by moving ↗ toward the Mini toolbar.
- ② To use the Ribbon, click the **Home** tab.

3 Click the Format Painter button (☞).

The mouse pointer changes to ☞ when you move the mouse over your document.

4 Click and drag over the text to which you want to apply the same formatting.

B Word copies the formatting from the original text to the new text.

To copy the same formatting multiple times, you can double-click ☞.
You can press Esc to cancel the Format Painter feature at any time.

Clear Formatting

Sometimes, you may find that you have applied too much formatting to your text, making it difficult to read. Or perhaps you simply applied the wrong formatting to your text. In that case, instead of undoing all your formatting changes manually, you can use the Clear Formatting command to remove any formatting you have applied to the document text. When you apply the Clear Formatting command, which is located in the Home tab on the Ribbon, Word removes all formatting applied to the text, and restores the default settings.

Clear Formatting

- ① Select the text from which you want to remove formatting.

Note: If you do not select text, Word removes text formatting from the entire document.

- ② Click the **Clear Formatting** button (x).

NOTICE OF REGULAR DIRECTORS' MEETING

TO: JOHN SMITH, DIRECTOR OF SMITH CORPORATION

Notice is now given that the regular monthly meeting of the board of directors will be held on October 5, 2012 at 9:00 a.m. at the principal office of the corporation located at 1234 Main Street, Phoenix, AZ.

Dated September 10, 2012

James O'Donnell, Secretary of Smith Corporation

A MINUTES OF THE LAST DIRECTORS' MEETING

The meeting was called to order at 7:00 p.m. on September 8, 2012. All members of the Board were present.

PAGE 1 OF 1 8 OF 8 WORDS

A Word removes all formatting from the selected text.

Format with Styles

Suppose you are writing a corporate report that requires specific formatting for every heading. Instead of assigning multiple formatting settings over and over again, you can create a style with the required formatting settings and apply it whenever you need it. A *style* is a set of text-formatting characteristics. These characteristics might include the text font, size, color, alignment, spacing, and more.

In addition to creating your own styles for use in your documents, you can apply any of the preset styles that Word supplies. These include styles for headings, normal text, quotes, and more.

Format with Styles

Create a New Quick Style

- ① Format the text as desired and then select the text.
- ② Click the **Home** tab on the Ribbon.

③ Click  in the Styles group.

④ Click **Create a Style**.

The Create New Style from Formatting dialog box appears.

⑤ Type a name for the style.

⑥ Click **OK**.

Word adds the style to the list of Quick Styles.

Apply a Quick Style

A screenshot of the Microsoft Word ribbon. The 'HOME' tab is highlighted with a red circle labeled '2'. In the top right corner of the ribbon, there is a dropdown menu with a red circle labeled 'A' over it. On the far right of the ribbon, there is a 'Styles' group with a red circle labeled '3' over it. The main document area contains the text:

NOTICE OF REGULAR DIRECTORS' MEETING
TO: JOHN SMITH, DIRECTOR OF SMITH CORPORATION
Notice is now given that the regular monthly meeting of the board of directors will be held on October 5, 2012 at 9:00 a.m. at the principal office of the corporation located at 1234 Main Street, Phoenix, AZ.
Dated September 10, 2012

James O'Donnell, Secretary of Smith Corporation

MINUTES OF THE LAST DIRECTORS' MEETING 1

The meeting was called to order at 7:00 p.m. on September 8, 2012. All members of the Board were present.

① Select the text that you want to format.

② Click the **Home** tab on the Ribbon.

3 Click a style from the Styles list.

A You can click to see the full palette of available styles.

B Word applies the style.

TIPS

How do I remove a style that I no longer need?

From the Home tab, display the full Quick Styles palette, right-click the style that you want to remove, and click the **Remove from Style Gallery** command. Word immediately removes the style from the Quick Styles list.

How do I customize an existing style?

Apply the style to your text. Then, select the text, click the Home tab, click the **Change Styles** button, and click the type of change that you want to make. For example, to switch fonts, click the **Fonts** option and

then select another font.

Apply a Template

A *template* is a special file that stores styles and other Word formatting tools. When you apply a template to a Word document, the styles and tools in that template become available for you to use with that document. Word comes with several templates preinstalled, and you can also create your own.

Of course, one way to apply a template to a document is to select it from the list of document types in the New screen that appears when you create a new Word document. Alternatively, you can attach a template to an existing document, as outlined here.

Apply a Template

- With the document to which you want to apply a template open in Word, click the **File** tab.

- Click **Options**.

The Word Options window opens.

- 3 Click Add-Ins.
- 4 Click the Manage ▾.
- 5 Click Templates.
- 6 Click Go.

The Templates and Add-ins dialog box opens.

7 Select **Automatically update document styles** (changes to).

8 Click **Attach**.

The Attach Template dialog box opens.

9 Locate and select the template you want to apply.

10 Click **Open**.

11 Click **OK** in the Templates and Add-ins dialog box.

2013-Gettysburg Address-template.docx - Word

Elaine Marmel

The Speech at Gettysburg, Pennsylvania

By Abraham Lincoln, Delivered on November 19, 1863

FOURSCORE and seven years ago our fathers brought forth upon this continent a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal.

Now we are engaged in a great civil war, testing whether that nation, or any nation so conceived and so dedicated, can long endure. We are met on a great battle-field of that war. We have come to dedicate a portion of that field as a final resting-place for those who here gave their lives that that nation might live. It is altogether fitting and proper that we should do this.

But in a larger sense, we can not dedicate—we can not consecrate—we can not hallow this ground. The brave men, living and dead, who struggled here, have consecrated it far above our poor power to add or detract. The world will little note, nor long remember, what we say here, but it can never forget what they did here. It is for us, the living, rather, to be dedicated here to the unfinished work which they who fought here thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion—that we here highly resolve that these dead shall not have died in vain—that this nation, under God, shall have a new birth of freedom and that government of the people, by

PAGE 1 OF 1 262 WORDS

Word applies the template, and then updates the styles used in the document to reflect those appearing in the template.

TIP

Can I create my own templates?

Yes. The easiest way to create a template is to base it on an existing Word document. Open the document on which you want to base your template, click the **File** tab, and click **Save As**. Select a place and click a folder, or click **Browse**. The Save As dialog box opens; locate and select the folder in which you want to save the template, type a name for it in the **File Name** field, click the **Save as Type** ▾, and choose **Word Template**. Click **Save** and Word saves the template in the folder you chose.

Chapter 7: Adding Extra Touches

Insert an Online Video

You can insert a video available on the Internet into a Word document. Once you have inserted the video, you can play it directly from the Word document.

You can insert videos you find using Bing Search or videos available on YouTube, or you can insert a video embed code — an HTML code that uses the `src` attribute to define the video file you want to embed. Most videos posted on the Internet are public domain, but, if you are unsure, do some research to determine whether you can use the video freely.

Insert an Online Video

- 1 Click where you want the video to appear.
- 2 Click the **Insert** tab.
- 3 Click **Online Video**.

The Insert Video window appears.

Insert Video

Bing Video Search
Search the web

Search Bing

YouTube

A

6

One Song For One Nation
2:15 - madisonrising

1 item 7 Cancel

A You can click here (**^** and **▼**) to navigate through the search results.

B You can click here to return to the Insert Video window and search for a different video.

6 Click the video you want to add to your document.

7 Click **Insert**.

C The video appears in your document, selected and surrounded by handles (□).

D Drag □ to rotate the video.

E □ controls text flow around the video as described in Chapter 3.

F Picture Tools appear on the Ribbon; you can use these tools to format the video.

TIP

How do I play an inserted video?

From Print Layout view or Read Mode view, click the video **Play** button (▶). The video appears in its own window. Click the **Play** button again to start the video. To stop the video and return to the document, click outside the video anywhere on the document.

Assign a Theme

A *theme* is a predesigned set of color schemes, fonts, and other visual attributes. Applying a theme to a document is a quick way to add polish to it. And, because themes are shared among the Office programs, you can use the same theme in your Word document that you have applied to worksheets in Excel or slides in PowerPoint.

Note that the effect of applying a theme is more obvious if you have assigned styles such as headings to your document. The effects of themes are even more pronounced when you assign a background color to a page.

Assign a Theme

Apply a Theme

- 1 Click the **Design** tab.
- 2 Click the **Themes** button.

Note: You can point the mouse at each theme to see its effect on your document.

3 Click a theme.

A Word applies the theme to the current document.

B You can use these tools to change the formatting of the theme's colors, fonts, paragraph spacing, and effects.

Create a Custom Theme

- 1 Apply a theme and edit the formatting to create the theme that you want to save.
- 2 Click the **Design** tab.
- 3 Click the Themes button.
- 4 Click **Save Current Theme**.

The Save Current Theme dialog box appears.

⑤ Type a unique name for the theme.

C By default, Word saves the theme to the Document Themes folder so that it is accessible in the Themes Gallery.

⑥ Click Save.

Word saves the theme and adds it to the list of available themes.

TIP

How can I make the effects of my theme more obvious?

As mentioned, the effects of your theme are more obvious if you have applied page styles such as headings and a background color to your document. To apply a background color, click the **Design** tab on the Ribbon, click the **Page Color** button in the Page Background group, and click a color in the palette; Word applies the color you selected to the background of the page. For help applying a heading style, see Chapter 6.

Add Borders

You can apply borders around your text to add emphasis or make the document aesthetically appealing. You can add borders around a single paragraph, multiple paragraphs, or each page in the document. (Be aware that you should not add too many effects, such as borders, to your document because it will become difficult to read.)

Word comes with several predesigned borders, which you can apply to your document. Alternatively, you can create your own custom borders — for example, making each border line a different color or thickness. Another option is to apply shading to your text to set it apart.

Add Borders

Add a Paragraph Border

- 1 Select the text to which you want to add a border.
- 2 Click the **Home** tab on the Ribbon.

3 Click the Borders button ().

4 Click a border.

A Word applies the border to the text.

Add a Page Border

1 Click the **Design** tab.

2 Click the **Page Borders** button.

The Borders and Shading dialog box appears, and displays the Page Border tab.

3 Click the type of border that you want to add.

B You can use these settings to select a different border line style, color, and width.

C You can click to specify whether to apply the border to each page of your entire document, a section, the first page of a section, or all pages of a section except the first.

D The Preview area displays a sample of the selections.

4 Click **OK**.

E Word applies the page border.

TIPS

How do I add shading to my text?

To add shading behind a block of text, select the text, click the **Home** tab on the Ribbon, click the **Shading** button () in the Paragraph group, and click a color to apply.

How do I create a custom border?

Select the text you want to add a border to, open the Borders and Shading dialog box, click the **Borders** tab, and click **Custom**. Choose the settings you want to apply to the first line of the border; then click in the **Preview** area where you want the line to appear. Repeat for each line you want to add, and then click **OK**.

Create Columns

You can create columns in Word to present your text in a format similar to a newspaper or magazine. For example, if you are creating a brochure or newsletter, you can use columns to make text flow from one block to the next.

If you simply want to create a document with two or three columns, you can use one of Word's preset columns. Alternatively, you can create custom columns, choosing the number of columns you want to create in your document, indicating the width of each column, specifying whether a line should appear between them, and more.

Create Columns

Create Quick Columns

- ① Select the text that you want to place into columns.

Note: If you want to apply columns to all text in your document, skip Step 1.

- 2 Click the **Page Layout** tab.
- 3 Click the **Columns** button.
- 4 Click the number of columns that you want to assign.

The screenshot shows the Microsoft Word ribbon with the 'PAGE LAYOUT' tab selected. The 'Columns' section now shows 'Two' columns assigned. The main content area displays the newsletter with two columns. An annotation 'A' with an arrow points to the left margin of the first column. The text in both columns is the same as in the previous screenshot.

A Word displays the selected text, or your document if you skipped

Step 1, in the number of columns that you specify.

Create Custom Columns

- Select the text that you want to place into columns.

Note: If you want to apply columns to all text in your document, skip Step 1.

- Click the **Page Layout** tab.

- Click the **Columns** button.

- Click **More Columns**.

The Columns dialog box appears.

- Click a preset for the type of column style that you want to apply.

B You can include a vertical line separating the columns (changes to).

6 Deselect this option to set exact widths for each column (changes to).

- Set an exact column width and spacing here.

C You can specify whether the columns apply to the selected text or the entire document.

8 Click **OK**.

D Word applies the column format to the selected text, or to your document if you skipped Step 1.

TIPS

How do I wrap column text around a picture or other object?

Click the picture or other object that you want to wrap, click the **Format** tab, click the **Wrap Text** button, and then click the type of wrapping that you want to apply.

Can I create a break within a column?

Yes. To add a column break, click where you want the break to occur and then press **Ctrl+Shift+Enter**. To remove a break, select it and press **Delete**.

To return to a one-column format, click the **Columns** button on the Page Layout tab, and then select the single-column format.

Insert a Table

You can use tables to present data in an organized fashion. For example, you might add a table to your document to display a list of items or a roster of classes. Tables contain columns and rows, which intersect to form cells. You can insert all types of data in cells, including text and graphics.

To enter text in a cell, click in the cell and then type your data. As you type, Word wraps the text to fit in the cell. Press **Tab** to move from one cell to another. You can select table cells, rows, and columns to perform editing tasks and apply formatting.

Insert a Table

Insert a Table

- 1 Click in the document where you want to insert a table.
- 2 Click the **Insert** tab.

3 Click the Table button.

A Word displays a table grid.

4 Slide the mouse pointer across the squares that represent the number of rows and columns you want in your table.

B Word previews the table as you drag over cells.

5 Click the square representing the lower-right corner of your table. The table appears in your document.

Cleaning Up Weird Household Problems

You've heard about different tips and tricks to use on various household problems. Some may work, some don't work. And some may sound so weird that you roll your eyes and discount them all together. The following tips and tricks may seem very strange to you, but they all work wonderfully!

Problem	Solution
Alcohol on your carpet	Sponge the area with warm water as soon as possible.
Blood on your carpet	

C Table Tools appear on the Ribbon.

⑥ Click in a table cell and type information.

D If necessary, Word expands the row size to accommodate the text.

You can press **Tab** to move the insertion point to the next cell.

Delete a Table

- 1 Click anywhere in the table you want to delete.
- 2 Click the **Layout** tab.
- 3 Click **Delete**.
- 4 Click **Delete Table**.

Word removes the table and its contents from your document.

TIPS

Can I add rows to a table?

Yes. To add a row to the bottom of the table, place the insertion point in the last cell and press **Tab**. To add a row anywhere else, use the buttons in the Rows & Columns section of the Layout tab.

What, exactly, is a table cell?

A *cell* refers to the intersection of a row and column in a table. In spreadsheet programs, columns are named with letters, rows with numbers, and cells are named using the column letter and row number.

For example, the cell at the intersection of column A and row 2 is called A2.

Apply Table Styles

When you click in a table you have added to your document, two new tabs appear on the Ribbon: Design and Layout. You can use the table styles found in the Design tab to add instant formatting to your Word tables. Word offers numerous predefined table styles, each with its own unique set of formatting characteristics, including shading, color, borders, and fonts.

The Design tab also includes settings for creating custom borders and applying custom shading. You can also use check boxes in the Table Style Options group to add a header row, emphasize the table's first column, and more.

Apply Table Styles

- ① Click anywhere in the table that you want to format.
- ② Click the **Table Tools Design** tab on the Ribbon.
- ③ Click a style from the Table Styles list.

Note: You can click  in the lower-right corner of the Table Styles Gallery to display the entire palette of available styles.

The screenshot shows a Microsoft Word document titled "table.docx". The "Table Tools" ribbon is selected, specifically the "DESIGN" tab. A callout bubble labeled "A" points to the first row of the table, which has a green background color. Another callout bubble labeled "B" points to the "Table Style Options" group on the ribbon, which includes checkboxes for "Header Row", "First Column", "Total Row", "Last Column", and "Banded Rows". A third callout bubble labeled "C" points to the "Borders" section of the ribbon, which includes buttons for "Shading", "Border Styles", "Pen Color", and "Borders".

Problem	Solution
Alcohol on your carpet	Sponge the area with warm water as soon as possible.
Blood on your carpet	Sponge the stain with cold water and pat dry. Repeat until the stain fades.
Cigarette burns on your carpet	Rub the mark with fine sandpaper to remove the charred fibers. Then, make a mild detergent solution and drip it slowly onto the stain, rub gently with a clean cloth. Leave for 5 minutes, then sponge it off with a solution made of 2 tablespoons borax to 2 cups water.
Gilt picture frames	Mix 1 egg white with 1 teaspoon bicarbonate of soda and sponge the surface.
Enamel	Scrub with washing soda and hot water, then rinse.

A Word applies the style.

B You can toggle table parts on or off using the Table Style Options check boxes.

C You can click these options to change the shading and borders.

Insert an Excel Spreadsheet

If Excel is installed on your computer, you can insert a new Excel spreadsheet into your Word document. You can then insert data such as text or graphics in the cells in the spreadsheet. To add text, click in a cell and begin typing; press **Tab** to move from one cell to another.

When you click in an Excel spreadsheet that you have inserted in your Word document, the Ribbon in Word changes to display various Excel tools and features. You can use these tools and features to work with any data you add to the spreadsheet.

Insert an Excel Spreadsheet

- ① Click in the document where you want to insert a table.
- ② Click the **Insert** tab on the Ribbon.
- ③ Click the **Table** button.
- ④ Click **Excel Spreadsheet**.

A An Excel spreadsheet appears, along with tools associated with Excel.

Note: Do not worry if the table seems misaligned; when you click outside the table, it will align properly.

5 Click in a cell and type the data that you want to add.

B The Home tab displays tools for formatting your cells and data.

C The Formulas tab offers tools for building Excel formulas.

You can click anywhere outside of the table to return to the Word tools and features.

Add Headers and Footers

If you want to include text at the top or bottom of every page, such as the title of your document, your name, or the date, you can use headers and footers. Header text appears at the top of the page above the margin; footer text appears at the bottom of the page below the margin.

To view header or footer text, you must display the document in Print Layout view. To switch to this view, click the View tab and click the Print Layout button. Then double-click the top or bottom of the page, respectively, to view the header or footer.

Add Headers and Footers

- 1 Click the **Insert** tab.
- 2 Click the **Header** button to add a header, or click the **Footer** button to add a footer.

This example adds a footer.

A The header or footer gallery appears.

3 Click a header or footer style.

Word adds the header or footer and displays the Header & Footer Tools tab.

B The text in your document appears dimmed.

C The insertion point appears in the Footer area.

D Header & Footer Tools appear on the Ribbon.

E Some footers contain information prompts.

What are the favorite maxims of democracy? A strict observance of justice and public faith and a steady adherence to virtue. These, sir, are the principles of a good government. No mischief, no misfortune, ought to deter us from a strict observance of justice and public faith. Would to heaven that these principles had been observed under the present government! Had this been the case the friends of liberty would not be so willing now to part with it. Can we boast that our government is founded on these maxims? Can we pretend to the enjoyment of political freedom or security when we are told that a man has been, by an act of Assembly, struck out of existence without a trial by jury, without examination, without being confronted with his accusers and witnesses, without the benefit of the law of the land? Where is our safety when we are told that this act was justifiable because the person was not a Socrates? What has become of the worthy member's maxims? Is this one of them? Shall it be a maxim that a man shall be deprived of his life without the benefit of law? Shall such a deprivation of life be justified by answering that a man's life was not taken secundum actum, because he was a bad man? Shall it be a maxim that government ought not to be empowered to protect virtue?

The honorable member, after attempting to vindicate that tyrannical legislative act to which I have been alluding, proceeded to take a view of the dangers to which this country is exposed. He told us that the principal danger arose from a government which, if adopted, would give away the Mississippi.

4 John Marshall Chief Justice of the Supreme Court from 1801-35 June 10, 1788 **5**

PAGE 1 OF 5 2218 WORDS

- 4 Click or select an information prompt.
- 5 Type footer information.
- 6 Click Close Header and Footer.

[On the Federal Constitution]

Delivered by John Marshall, Chief Justice of the Supreme Court from 1801-35, on June 10, 1788 in the Virginia Convention, in reply to the Constitution of the United States.

MR. CHIEF JUSTICE: In view of the discussion heretofore, very uniformly throughout our assemblies for constitutional conventions, from one part of the Union to another, who informed the system admitted to its adoption, and those who supported it, intended the establishment and security of the Union. The supporters of the Constitution claim the title of virtuous Americans, supporting their cause. We, at least, in this Commonwealth, those who opposed it, believed it dangerous to mankind. We prefer Republicanism to any other form of government we are convinced that it will have a peaceful tendency to secure our liberty and promote our happiness. We prefer it likewise over Aristocracy and the well-regulated Democracy. We recommended it to the good people of Massachusetts. Respects, though not unanimous, of the anti-slavery organization, in all our cities, over secured their assent. That decision, however, did not extend to what the sensible performance, there, occurred. It has, however, suggested on the necessity of a due attention to certain measures, to contain the evil of slavery, in the new government. We, therefore, proposed, in our resolutions, that Congress, in the exercise of its authority, make no laws respecting slaves, in any territory, unless in conformity with the existing laws of the country where they now resided in every government, but more especially in a democratick where they resided.

What law, then, by virtue of a system of a democratick, strict observance of justice and public faith, and a strict adherence to virtue, these, sir, are the principles of a good government. No mischief, no misfortune, ought to deter us from a strict observance of justice and public faith. Would to heaven that these principles had been observed under the present government! Had this been the case the friends of liberty would not be so willing now to part with it. Can we boast that our government is founded on these maxims? Can we pretend to the enjoyment of political freedom or security when we are told that a man has been, by an act of Assembly, struck out of existence without a trial by jury, without examination, without being confronted with his accusers and witnesses, without the benefit of the law of the land? Where is our safety when we are told that this act was justifiable because the person was not a Socrates? What has become of the worthy member's maxims? Is this one of them? Shall it be a maxim that a man shall be deprived of his life without the benefit of law? Shall such a deprivation of life be justified by answering that a man's life was not taken secundum actum, because he was a bad man? Shall it be a maxim that government ought not to be empowered to protect virtue?

The honorable member, after attempting to vindicate that tyrannical legislative act to which I have been alluding, proceeded to take a view of the dangers to which this country is exposed. He told us that the principal danger arose from a government which, if adopted, would give away the Mississippi.

John Marshall Chief Justice of the Supreme Court from 1801-35 June 10, 1788

PAGE 1 OF 5 2218 WORDS

- F** Word closes the Header & Footer Tools tab and displays the header or

footer on the document page.

G You can zoom out to view the header or footer on multiple pages of your document.

Note: To edit a header or footer, click the **Insert** tab on the Ribbon, click the **Header** or **Footer** button, and click **Edit Header** or **Edit Footer** to redisplay the Header & Footer Tools tab.

TIPS

Can I omit the header or footer from the first page?

Yes. Click the **Insert** tab, click the **Header** or **Footer** button, and click **Edit Header** or **Edit Footer**. Next, select the **Different First Page** check box in the Options group. If you want to remove the header or footer for odd or even pages, click to select the **Different Odd & Even Pages** check box.

How do I remove a header or footer?

Click the **Insert** tab, click the **Header** or **Footer** button, and click **Remove Header** or **Remove Footer**. Word removes the header or footer from your document.

Insert Footnotes and Endnotes

You can include footnotes or endnotes in your document to identify sources or references to other materials or to add explanatory information. When you add a footnote or endnote, a small numeral or other character appears alongside the associated text, with the actual footnote or endnote appearing at the bottom of a page or the end of the document, respectively.

When you insert footnotes or endnotes in a document, Word automatically numbers them for you. As you add, delete, and move text in your document, any associated footnotes or endnotes are likewise added, deleted, or moved, as well as renumbered.

Insert Footnotes and Endnotes

Insert a Footnote

- 1 Click where you want to insert the footnote reference.
- 2 Click the **References** tab.

3 Click Insert Footnote.

A Word displays the footnote number in the body of the document and in the note at the bottom of the current page.

4 Type the footnote text.

You can double-click the footnote number or press **Shift+F5** to return the insertion point to the place in your document where you inserted the footnote.

Insert an Endnote

The screenshot shows the Microsoft Word ribbon with the 'REFERENCES' tab selected (highlighted by a red circle with the number 2). Below the ribbon, the 'Footnotes' group is visible, containing the 'Insert Endnote' button (highlighted by a red circle with the number 3). The main document area contains a speech by John Marshall. A red circle with the number 1 points to the endnote reference 'secundem aitem' in the text. A blue callout bubble labeled 'B' points to the page number 'Page 1' at the bottom of the page.

under the present government had the been the case the friends of liberty would not be so willing now to part with it. Can we boast that our government is founded on these maxims? Can we pretend to the enjoyment of political freedom or security when we are told that a man has been, by an act of Assembly, struck out of existence without a trial by jury, without examination, without being confronted with his accusers and witnesses, without the benefit of the law of the land? Where is our safety when we are told that this act was justifiable because the person was not a Socrate? What has become of the worthy member's maxims? Is this one of them? Shall it be a maxim that a man shall be deprived of his life without the benefit of law? Shall such a deprivative life be justified by answering that a man's life was not taken secundem aitem? he was a bad man? Shall it be a maxim that government ought not to be empowered to protect virtue?

The honorable member, after attempting to vindicate that tyrannical legislative act to which I have been alluding, proceeded to take a view of the dangers to which this country is exposed. He told us that the principal danger arose from a government which, if adopted, would give away the Mississippi.

John Marshall Page 1 June 10, 1788

- ➊ Click where you want to insert the endnote reference.
- ➋ In this example, the endnote number appears on Page 1.
- ➌ Click the **References** tab.
- ➍ Click **Insert Endnote**.

Word inserts the endnote number in the body of your document.

C Word inserts the endnote number at the end of your document and displays the insertion point in the endnote area at the bottom of the last page of the document.

④ Type your endnote text.

You can double-click the endnote number or press **Shift+F5** to return the insertion point to the place in your document where you inserted the endnote.

TIP

How can I change the starting number for footnotes or endnotes in my document?

If you need to change the starting footnote or endnote number in your document — for example, if you are working on a new chapter, but you want the numbering to continue from the previous one — click the **References** tab and click the dialog box launcher (in the Footnotes group. The Footnote and Endnote dialog box appears; click in the **Start**

at text box and type a number or use the spin arrow (↑↓) to set a new number. Click **Apply** to apply the changes to the document.

Insert Page Numbers and Page Breaks

You can add page numbers to make your documents more manageable. For example, adding page numbers to longer documents can help you keep the pages in order after printing. You can add page numbers to the top or bottom of a page or in the page margins or at the current location of the insertion point.

Adding page breaks can help you control where text appears. For example, add a page break at the end of one chapter to ensure that the next chapter starts on its own page. You can insert page breaks using the Ribbon or your keyboard.

Insert Page Numbers and Page Breaks

Insert Page Numbers

- 1 Click the Insert tab.

② Click Page Number.

Page number placement options appear.

③ Click a placement option.

A gallery of page number alignment and formatting options appears.

④ Click an option.

A Word inserts the page number as part of the header or footer.

B Header & Footer Tools appear on the Ribbon.

⑤ Click Close Header and Footer to exit the header or footer area.

Note: See the section “Add Headers and Footers” to learn more.

Insert Page Breaks

The screenshot shows the Microsoft Word ribbon with the "Insert" tab highlighted (step 2). A red circle with the number 3 points to the "Page Break" button in the "Breaks" section of the ribbon.

approximately 29,000 school-aged children within three miles of the planned store location.

We believe that to attain our headquarters position, we will need to become a visible member of the athletic community through sponsorship, seminars, team and league promotions and the development of a community running program.

1 *2.0 Company Summary*

The Athletic Shoe sells quality athletic footwear for the entire family, specializing in running shoes and accessories. We have selected a location in a renovated shopping center anchored by Fresh Market, Bed Bath and Beyond, Blockbuster Video, and four restaurants. The balance of tenants caters primarily to children. The quality of our customer service and the lack of competition in the city will allow us to quickly become the footwear headquarters for the local individual athlete and various teams, leagues and schools. This Athletic Shoe store, while part of a worldwide chain, will be family owned and operated.

2.1 Start-up Summary

The start-up costs include:

- * Store build out the store and operations
- * Inventory control, (computers and cash registers)
- * The foot scanner and fixture
- * Opening inventory

PAGE 3 OF 29 600 WORDS

- 1** Click in the document where you want to insert a page break.
- 2** Click the **Insert** tab.
- 3** Click **Page Break**.

A blue arrow labeled C points to the vertical line separating two pages of text. The text on both pages is identical to the content shown in the first screenshot.

2.0 Company Summary

This Athletic Shoe store, while part of a worldwide chain, will be family owned and operated.

PAGE 4 OF 30 600 WORDS

C Word inserts a page break and moves all text after the page break

onto a new page.

TIPS

Is there a faster way to insert a page break?

Yes. You can use keyboard shortcuts to quickly insert a page break as you type in your document. You can insert a page break by pressing **Ctrl + Enter**. You can also insert a line break by pressing **Shift + Enter**.

Can I change the page number style?

Yes. Click the **Page Number** button on the Insert tab, and then click **Format Page Numbers**. The Page Number Format dialog box appears. You can change the number style to Roman numerals, alphabetical, and more. You can also include chapter numbers with your page numbers.

Mark Index Entries

If your document requires an index, you can use Word to build one. Indexes can contain main entries and subentries as well as cross-references (entries that refer to other entries).

Before you can build an index, you must mark any words or phrases in your document that should appear in the index. When you do, Word adds a special index field, called an XE field, to the document; this field includes the marked word or phrase, as well as any cross-reference information you might have added. After you mark index entries, you can generate the index (discussed in the next section).

Mark Index Entries

Mark a Word or Phrase

- 1 Select the text for which you want to create an index entry.
- 2 Click the **References** tab.

③ Click the **Mark Entry button.**

The Mark Index Entry dialog box appears.

A The text you selected appears in the Main Entry field.

Note: To create an entry for a person's name, type the name in the **Main Entry** field in this format: Last Name, First Name.

B Select **Current Page** (changes to).

C If you want the index to include an entry for the word or phrase on this page only, click **Mark**.

D To mark all occurrences of the word or phrase in the document, click **Mark All**.

E Word adds an index entry field to your document.

Note: To view the field, click the Home tab's **Show/Hide** button (¶).

④ Click **Close.**

Mark a Word or Phrase that Spans a Range of Pages

- ① Select the range of text to which the index entry should refer.
 - ② Click the Insert tab.
 - ③ Click Links.
 - ④ Click Bookmark.
 - ⑤ In the Bookmark dialog box, type a bookmark name. Do not include spaces.
 - ⑥ Click Add.
 - ⑦ Click Close.
- Note:** The Cancel button becomes the Close button.

- 8 Click at the end of the text you selected.
- 9 Click the **References** tab.
- 10 Click **Mark Entry**.
- 11 In the Mark Index Entry dialog box, type the word or phrase that should appear in the index for this entry.
- 12 Select **Page range** (changes to).
- 13 Click the **Bookmark** and choose the bookmark you just created.
- 14 Click **Mark**.
- F Word adds an XE field to your document.
- 15 Click **Close**.

TIPS

Can I add a subentry?

Yes. Select the text and, in the Mark Index Entry dialog box, type the entry under which the text should appear in the **Main entry** field. Then

type subentry text in the **Subentry** field. If the text should appear as a subentry *and* a main entry, add two XE fields — one for each entry.

Can I add index entry cross-references?

Yes. Click **Cross-reference** in the Mark Index Entry dialog box and type the index word or phrase to which the entry should refer.

Generate an Index

After you mark the words and phrases in your Word document that you want to appear as index entries, including main entries, subentries, and cross-references, you can generate the index. When you generate an index, Word searches for marked words and phrases, sorts them alphabetically, adds page-number references, and removes duplicate entries that cite the same page number.

If you do not care for the default appearance of the index, you can customize it to suit your taste. Also, if you make a change to your document after generating the index, you can update the index to reflect the change.

Generate an Index

Generate an Index

- 1 Click the spot in your document where you want to insert the index.
- 2 Click the **References** tab.

③ Click the **Insert Index** button.

The Index dialog box appears.

④ Click the **Formats** and select an index design.

A Preview the selected index design here.

⑤ Select **Indented** (changes to).

⑥ Click the **Columns** to change the number of columns per page in the index.

⑦ Click **OK**.

PAGE 30 OF 31 2009 WORDS 0% 100%

The screenshot shows a Microsoft Word document titled "Business Plan-generate index.docx". The "REFERENCES" tab is selected. The index is displayed in the main pane, showing entries for categories like A, B, M, N, O, and P, each with a list of terms and their corresponding page numbers. A red circle labeled "1" points to the updated entry "adult - 2, 6, 8, 12". A red circle labeled "2" points to the "REFERENCES" tab. A red circle labeled "3" points to the "Update Index" button in the ribbon.

1 After making changes to your document, click anywhere in the index.

The index entries appear highlighted in gray, indicating that they are fields.

- ② Click the **References** tab.
- ③ Click the **Update Index** button.

Word updates the index to reflect changes to the document that have occurred since the original index was generated.

TIPS

Can I customize the layout of my index?

Yes. Open the Index dialog box, click the **Formats** , choose **From Template**, and click **Modify**. The Style dialog box opens; click the index style you want to change, and again click **Modify**. Finally, select the desired options in the Formatting section.

How do I edit index entries?

Click the **Home** tab, click the **Replace** button, type the contents of the XE field that you need to replace in the **Find What** field (for example, **XE “John Adams”**), type the replacement text in the **Replace With** field (for example, **XE “Adams, John”**), and click **Replace All**.

Generate a Table of Contents

You can use Word to generate a table of contents (TOC) for your document that automatically updates as you change your document. Word generates a TOC by searching for text that you format using one of Word's predefined heading styles — Heading 1, Heading 2, and Heading 3. It then copies this text and pastes it into the TOC. You can select from Word's gallery of TOC styles to establish the TOC's look and feel.

You can create a TOC at any time, continue working, and update the TOC automatically with new information whenever you want.

Generate a Table of Contents

Style Text as Headings

- ① Click anywhere in the line that you want to style as a heading.
- ② Click the **Home** tab.

3 In the Styles group, click the style you want to apply.

A If you do not see the style you want to apply, click and choose the desired style from the Quick Style Gallery.

B If the style you want to apply does not appear in the Quick Style Gallery, click and choose the desired style from the Styles pane, as shown here.

C Word applies the style you chose to the selected text.

Generate a Table of Contents

- 1 Click the location in your document where you want to insert a TOC.
- 2 Click the **References** tab.
- 3 Click **Table of Contents**.
- 4 From the gallery that appears, click the TOC style you want to use.

The screenshot shows a Microsoft Word document titled 'Business Plan-tox.docx'. A 'Table of Contents' has been inserted into the document, appearing as a list of headings and their corresponding page numbers. A blue circle labeled 'D' points to the 'Table of Contents' heading. The table of contents is as follows:

Section	Page Number
1.0 Executive Summary	2
1.1 Objectives	3
1.2 Mission	3
2.0 Company Summary	4
2.1 Start-up Summary	4
3.0 Products	6
4.0 Market Analysis Summary	7
4.1 Market Segmentation	8
4.1.1 Runners	8
4.1.2 Non-runners	9
4.2 Target Market Segment Strategy	10
4.3 Technology Analysis	11

D Word generates a TOC.

Note: To delete a TOC, click the **Table of Contents** button and choose **Remove Table of Contents**.

Note: If you edit your document, you can update your TOC to reflect the changes by clicking the **Update Table** button in the References tab's Table of Contents group; then specify whether to update page numbers only or the entire table, including heading names and levels.

TIP

Can I include additional heading styles, such as Heading 4, in the table of contents?

Yes. Complete Steps 2 to 4 in the subsection “Generate a Table of Contents,” selecting **Custom Table of Contents** in Step 4 to display the Table of Contents dialog box. Click the **Show levels** : (A) to change the number of heading styles included in the TOC. Click **OK**. Word prompts you to replace the current TOC. Click **Yes** to update the TOC.

Create a Bibliography

You can use Word to generate a bibliography for your document, formatting the entries using the style of your choice: APA, The Chicago Manual of Style, GB7714, GOST – Name Sort, GOST – Title Sort, Harvard – Anglia, IEEE, ISO 690 – First Element and Date, ISO 690 – Numerical Reference, and so on.

For Word to determine what entries should appear in the bibliography, you must cite sources in your document as you work. Word then collects the information from these citations to generate the bibliography. (Note that when you add a source to a document, Word saves it for use in subsequent documents.)

Create a Bibliography

Add a Citation

- 1 Click at the end of the sentence or phrase that contains information you want to cite.

2 Click the References tab.

3 Click Insert Citation.

4 Click Add New Source.

The Create Source dialog box opens.

5 Click the Type of Source ▾ and select the type of source you want to cite (here, Journal Article).

The fields in the Create Source dialog box change depending on the source you select.

6 Type the requested information.

7 Click OK.

A Word adds a citation to your document, and adds the source to the Insert Citation menu.

Generate the Bibliography

- 1 Click the location where the bibliography should appear (typically at the end of the document).
- 2 Click the **References** tab.
- 3 Click the **Bibliography** button.
- 4 Choose one of the predefined bibliography gallery options.

B Word inserts the bibliography.

If you slide the mouse pointer over the bibliography, light gray shading appears, indicating a Word field.

Note: To specify which styleguide you want to use, click the **References** tab, click the **Style ▾** in the Citations & Bibliography group, and choose a style guide from the list that appears.

TIP

What can I do if I do not have all the information I need about a citation?

If you want to add a citation to your document but you are missing some of the required information, you can create a placeholder. To do so, click the **References** tab, click **Insert Citation**, and choose **Add New Placeholder**. The Placeholder Name dialog box opens; type a name for the placeholder. Later, add citation information by clicking the **Manage Sources** button in the **References** tab to open the Manage Sources dialog box, clicking the placeholder under Current List, clicking **Edit**, and typing the necessary information.

Chapter 8: Reviewing Documents

Work in Read Mode View

Read Mode view optimizes your document for easier reading and helps minimize eye strain when you read the document on-screen. This view removes most toolbars, and supports mouse, keyboard, and tablet motions. To move from page to page in a document using your mouse, you can click the arrows on the left and right sides of the pages or use the scroll wheel. To navigate using the keyboard, you can press the Page Up, Page Down, space bar, and Backspace keys on the keyboard, or press any arrow key. If you use a tablet or other touch pad device, swipe left or right with your finger.

Work in Read Mode View

Look Up Information Using Define

- ① Click to display the document in Read Mode view.
- ② Select the word you want to look up and right-click.
- ③ From the menu that appears, click **Define**.

Note: If you have not yet installed a dictionary, a pane appears, giving you dictionary choices. See Chapter 4 for details on downloading and installing a dictionary.

A Word displays a balloon containing definition information.

To close the balloon, click anywhere outside of it.

The Speech at Gettysburg, Pennsylvania

By Abraham Lincoln

Delivered on November 19, 1863

FOURSCORE and seven years ago our fathers brought forth upon this continent a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal.

Now we are engaged in a great civil war, testing whether that nation, or any nation so conceived and so dedicated, can long endure. We are met on a great battle-field of that war. We have come to dedicate a portion of that field as a final resting-place for those who here gave their lives that that nation might live. It is altogether fitting and proper that we should do this.

But in a larger sense, we can not dedicate—we can not consecrate—we can not hallow this ground. [The brave men, living and dead, who struggled here, have consecrated it far above our poor power to add or detract.] The world will little say here, but it can never forget what they did here. It is for us, then, rather to be dedicated here to the unfinished work which they who fought here have truly done, than to be dedicated to the great task remaining,

SCREEN 1 OF 2 382 WORDS

100%

B Word changes the color used to select the text and displays a comment block containing the insertion point.

④ Type your comment.

⑤ Click **x** to close the comment block.

C This symbol represents your comment; click it at any time to view the comment.

TIPS

What are some of the different views available in Read Mode?

To display all comments in the document, click **View** and then click **Show Comments**. To view your document as if it were printed on paper, click **View** and then click **Layout**. From the menu that appears, click **Paper Layout**.

Can I change the column width?

Yes. Click **View** and then click **Column Width**. From the menu that appears, choose **Narrow** or **Wide**; click **Default** to return to the original column view. Note that on a standard monitor, Default and Wide look the same; Wide takes effect on wide-screen monitors.

Find and Replace Text

Suppose you want to edit a paragraph in your document that contains a specific word or phrase. You can use Word's Find tool to search for the word or phrase instead of scrolling through your document to locate that paragraph.

In addition, you can use the Replace tool to replace instances of a word or phrase with other text. For example, suppose you complete a long report, only to discover that you have misspelled the name of a product you are reviewing; you can use the Replace tool to locate and correct the misspellings.

Find and Replace Text

Find Text

- 1 Click at the beginning of your document.
- 2 Click the **Home** tab.

3 Click Find.

A The Navigation pane appears.

4 Type the text that you want to find.

B Word searches the document and highlights occurrences of the text.

C Word also lists occurrences of the text in the Navigation pane.

5 Click an entry in the Navigation pane.

D Word selects the corresponding text in the document.

6 When finished, click the Navigation pane's ✕.

Replace Text

- 1 Click at the beginning of your document.
- 2 Click the **Home** tab.
- 3 Click **Replace**.

The Find and Replace dialog box opens with the Replace tab shown.

4 In the **Find what** box, type the text that you want to find.

5 Type the replacement text in the **Replace with** box.

6 Click **Find Next**.

E Word locates the first occurrence.

7 Click **Replace** to replace the occurrence.

F To replace every occurrence in the document, you can click **Replace All**.

Note: When Word finds no more occurrences, a message appears; click **OK**, and the Cancel button in the Find and Replace window changes to **Close**.

8 Click **Close**.

TIPS

Where can I find detailed search options?

Click **More** in the Find and Replace dialog box to reveal additional search options. For example, you can search for matching text case, whole words, and more. You can also search for specific formatting or special characters by clicking **Format** and **Special**.

How can I search for and delete text?

Start by typing the text you want to delete in the **Find what** box; then leave the **Replace with** box empty. When you search and click **Replace**, Word looks for the text and replaces it with nothing, effectively deleting the text for which you searched.

Scan Document Content

If you are working with a very long document, using the scroll bar on the right side of the screen or the Page Up and Page Down keys on your keyboard to locate a particular page in that document can be time-consuming. To rectify this, you can use the Navigation pane to navigate through a document. This pane can display all the headings in your document or a thumbnail image of each page in your document. You can then click a heading or a thumbnail image in the Navigation pane to view the corresponding page.

Scan Document Content

Navigate Using Headings

Note: To navigate using headings, your document must contain text styled with heading styles. See Chapter 6 for details on styles.

- ① Click the **View** tab.
- ② Select **Navigation Pane** (changes to).

The Navigation pane appears.

- A** Heading1 styles appear at the left edge of the Navigation pane.
- B** Word indents Heading2 styles slightly and each subsequent heading style a bit more.
- C** This icon (■) represents a heading displaying subheadings; you can click it to hide subheadings.
- D** This icon (□) represents a heading that is hiding subheadings; you can click it to display the subheadings.

E 5.0 **Strategy and Implementation Summary**

The Athletic Shoe uses a strategy of providing a service to the entire market. While we will focus on our two primary customer segments (active families and runners), we offer a product that virtually every consumer requires.

We will create an atmosphere that is appealing to the "true athletic footwear customer." The balance of customers will come because they will see this as the "place" where athletes buy their shoes.

The store will be merchandised in an exciting, athletic atmosphere. Televisions will continually play tapes of sporting events and live sports broadcasts. There will be posters highlighting the top athletes and their athletic shoe choices. There will also be a section to pick up information about upcoming races, events, and seminars. Eventually, race sign-ups will occur in the store as well as presentations from shoe manufacturers, product representatives, nutritionists, trainers, coaches, runners and hopefully, professional athletes.

Strategic Assumption:

3

The Athletic Shoe Business Plan Page | 12

F

G 1

capture. The upper income adult will still want name-brand newer styles. The middle and lower income adults will look to the discount department stores and "discount shoe warehouse" concepts for practical athletic footwear. This customer is also less concerned about customer service and the proper fit, since they are not as tied on their athletic shoes and buy less frequently.

Active Young Adult - Twenty to twenty-four years old. This is a small segment, approximately 5,500 people, but these individuals tend to be very active. Participating in sports is still a social activity for this primarily single group. Baseball, Basketball, Softball, Soccer, and Flag Football leagues are popular with this age.

Adult Participant - Twenty-five years old and above. This segment can be divided best by income level.

An active, upper income participant will look for quality, name-brand footwear based upon the sport that requires the purchase. These adults are willing to pay a higher price for a new style or features they deem are important.

The active middle income participant will again look for a quality shoe at a competitive price. This group may not require the newest style, but still wants good quality with basic features for the sport they participate in.

CLICK TO ENLARGE

Market Analysis (Pie)

1 Click Pages.

F Word displays each page in your document as a thumbnail.

② Click a thumbnail.

G Word selects that page in the Navigation pane and moves the insertion point to the top of that page. In the Navigation pane, Word surrounds the current page with a heavy blue border.

TIPS

What can I do with the Search Document box?

You can use the Search Document box to find text in your document; see the “Find Text” subsection of the section “Find and Replace Text” for details on using this box and on other ways you can search for information in your document.

Can I control the headings that appear?

Yes. While viewing headings, right-click any heading in the Navigation pane. From the menu that appears, point at **Show Heading Levels** and, from the submenu that appears, click the heading level you want to display (for example, **Show Heading 1**, **Show Heading 2**, and so on up to **Show Heading 9**).

Check Spelling and Grammar

Word automatically checks for spelling and grammar errors. Misspellings appear underlined with a red wavy line, and grammar errors are underlined with a blue wavy line. If you prefer, you can turn off Word's automatic Spelling and Grammar Check features.

Alternatively, you can review your entire document for spelling and grammatical errors all at one time. To use Word's Spelling and Grammar checking feature, you must install a dictionary; see Chapter 4 for details on downloading and installing apps for Word.

Check Spelling and Grammar

Correct a Mistake

➊ When you encounter a spelling or grammar problem, right-click the underlined text.

A A menu appears, showing possible corrections. Click one, if

applicable.

B To ignore the error, click **Ignore All**.

C To make Word stop flagging a word as misspelled, click **Add to Dictionary**.

Run the Spell Checker

1 Click at the beginning of your document.

Note: To check only a section of your document, select the section first.

2 Click the **Review** tab.

3 Click **Spelling & Grammar**.

D Word selects the first mistake and displays either the Spelling or the Grammar pane.

E The spelling or grammar mistake appears here.

F Suggestions to correct the error appear here.

G Definitions of the error and the highlighted suggestion appear here.

4 Click the suggestion you want to use.

5 Click **Change**.

H To correct all misspellings of the same word, you can click **Change All**.

I You can click **Ignore** or **Ignore All** to leave the selected word or phrase unchanged.

6 Repeat Steps **4** and **5** for each spelling or grammar mistake.

Word displays a dialog box when it finishes checking for spelling and grammar mistakes.

7 Click **OK**.

TIP

How do I turn the automatic spelling and grammar checking off?

To turn off the automatic checking features, follow these steps:

- 1 Click the **File** tab and then click **Options**.

- 2 In the Word Options dialog box, click **Proofing**.
- 3 In the When Correcting Spelling and Grammar in Word section, deselect **Check spelling as you type** (changes to).
- 4 Deselect **Mark grammar errors as you type** (changes to).
- 5 Click **OK**.

Work with AutoCorrect

As you may have noticed, Word automatically corrects your text as you type. It does this using its AutoCorrect feature, which works from a preset list of misspellings.

To speed up your text-entry tasks, you can add your own problem words — ones you commonly misspell — to the list. The next time you mistype the word, AutoCorrect fixes your mistake for you. If you find that AutoCorrect consistently changes a word that is correct as is, you can remove that word from the AutoCorrect list. If you would prefer that AutoCorrect not make any changes to your text as you type, you can disable the feature.

Work with AutoCorrect

- 1 Click the File tab.

Backstage view appears.

- 2 Click Options.

The Word Options dialog box appears.

③ Click **Proofing** to display proofing options.

④ Click **AutoCorrect Options**.

The AutoCorrect dialog box appears.

A The corrections Word already makes automatically appear in this area.

- 5** Click here and type the word you typically mistype or misspell.
- 6** Click here and type the correct version of the word.
- 7** Click Add.

B Word adds the entry to the list to automatically correct.

You can repeat Steps **5** to **7** for each automatic correction you want to add.

- 8** Click **OK** to close the AutoCorrect dialog box.
- 9** Click **OK** to close the Word Options dialog box.

TIPS

How does the automatic correction work?

As you type, if you mistype or misspell a word stored as an AutoCorrect entry, Word corrects the entry when you press **Spacebar**, **Tab**, or **Enter**.

What should I do if Word automatically replaces an entry that I do not want replaced?

Position the insertion point at the beginning of the AutoCorrected word and click the **AutoCorrect Options** button (). From the list that appears, click **Change back to**. To make Word permanently stop correcting an entry, follow Steps 1 to 4, click the stored AutoCorrect entry in the list, and then click **Delete**.

Using Word's Thesaurus and Dictionary

If you are having trouble finding just the right word or phrase, you can use Word's thesaurus. The thesaurus can help you find a synonym — a word with a similar meaning — for the word you originally chose, as well as an antonym, which is a word with an opposite meaning. When you use the thesaurus to look up a word, you also see the word's definition.

If you prefer, you can bypass the thesaurus and use the dictionary you download from the Office Store; see Chapter 4 for details on how to download and install an Office app.

Using Word's Thesaurus and Dictionary

Using Word's Thesaurus

- 1 Click anywhere in the word for which you want to find a substitute or

opposite.

Note: You can press **Shift+F7** to display the Thesaurus pane.

② Click the **Review** tab.

③ Click the **Thesaurus** button (□).

The Thesaurus pane appears.

A The word you selected appears here.

B Each word with an arrow on its left and a part of speech on its right represents a major heading.

Note: You cannot substitute major headings for the word in your document.

C Each word listed below a major heading is a synonym or antonym for the major heading.

D Antonyms are marked.

④ Point the mouse at the word you want to use in your document and

click the ▾ that appears.

5 Click Insert.

Word replaces the word in your document with the one in the Thesaurus pane.

Using Word's Dictionary

① Right-click the word you want to look up.

② From the menu that appears, click **Define**.

E Word selects the word you right-clicked.

F A pane for the installed dictionary appears, displaying definitions of the word you selected.

TIP

Is there a faster way I can display synonyms?

Yes. Follow these steps:

1 Right-click the word for which you want a synonym.

- ② Click Synonyms.**
- ③ Click a choice in the list that appears to replace the word in your document.**

Translate Text

You can translate a word from one language to another using language dictionaries installed on your computer. If you are connected to the Internet, the Translation feature searches the dictionaries on your computer as well as online dictionaries.

While the feature is capable of fairly complex translations, it may not grasp the tone or meaning of your text. You can choose Translate Document from the Translate drop-down menu to send the document over the Internet for translation, but be aware that Word sends documents as unencrypted HTML files. If security is an issue, do not choose this route; instead, consider hiring a professional translator.

Translate Text

Translate a Word or Phrase

1 Select a word or phrase to translate.

2 Click the **Review** tab.

3 Click Translate.

4 Click Translate Selected Text.

The Research pane appears.

A The phrase you selected appears here.

B The current translation languages appear here.

C You can click ▾ to display available translation languages.

D The translation appears here.

Translate a Document

- 1 Open the document you want to translate.
- 2 Click the **Review** tab.
- 3 Click **Translate**.
- 4 Click **Translate Document**.

Note: If the Translation Language Options dialog box appears, select the translation language you want to use.

The Translate Whole Document dialog box appears, notifying you that your document will be sent over the Internet for translation.

- 5 Click **Send**.

Your browser opens, displaying the translated document.

The screenshot shows a Microsoft Translator interface comparing two versions of a document. The left column is in English and the right column is in Italian. At the top right, there's a 'Views' button with four icons: 'List', 'Table', 'Text', and 'Image'. A blue callout bubble with the letter 'E' points to the 'Text' icon.

September 3, 2012

Jane Smith
Memorial Sprinklers, LLC
4836 Memorial Hwy., Suite 200
Phoenix, AZ 85000

Dear Ms. Smith:

Thank you for selecting Marmel Enterprises, LLC to assist you in using some of your Microsoft Office products, specifically Microsoft Word 2013 and Microsoft Excel 2013. Marmel Enterprises, LLC looks forward to helping you choose how best to use these programs to meet your needs and to possibly provide support for Microsoft Project as well.

As we agreed, training classes will be held as follows:

Class 1 September 17
Class 2 September 18
Class 3 September 23

Please be aware that these programs are multi-faceted and can be used in different ways by different people. Because each user can use each program differently, please understand the following in retaining Marmel Enterprises, LLC:

Because you are best qualified to assess your business and your needs, it is your responsibility to decide what information you desire from these programs and how these programs should be used in your office to suit your purposes best. The accuracy of the information you receive from these programs is entirely dependent on the accuracy of the data that you enter into them.

3 Settembre 2012

Jane Smith
Memorial Irrigatori, LLC
4836 Memorial Hwy., Suite 200
Phoenix, AZ 85000

Cara Sig. ra Smith:

Vi ringraziamo per aver Marmel Enterprises, LLC per aiutarvi nell'utilizzo di alcuni dei vostri prodotti di Microsoft Office, in particolare 2013 di Microsoft Word e Microsoft Excel 2013. Marmel Enterprises, LLC attende per aiutare che si sceglie come meglio utilizzare questi programmi per soddisfare le vostre esigenze ed eventualmente fornire anche il supporto per Microsoft Project.

Come abbiamo concordato, corsi di formazione si svolgerà come segue:

Classe 1 settembre 17
Classe 2 18 settembre
Classe 3 23 settembre

Si prega di essere consapevole che questi programmi sono molteplici e possono essere utilizzati in modi diversi da persone diverse. Poiché ogni utente può utilizzare ogni programma in modo diverso, vi preghiamo di comprendere il seguente nella conservazione Marmel Enterprises, LLC:

Perché siete meglio qualificati per valutare il vostro business e le vostre esigenze, è vostra responsabilità di decidere quali informazioni desideri da questi programmi e come questi programmi dovrebbero essere utilizzati nel vostro ufficio per adattarsi ai vostri scopi meglio. L'accuratezza delle informazioni che si ricevono da questi programmi dipende interamente l'esattezza dei dati che si entra in loro.

E You can use these Views buttons to display the documents side by side as shown here.

TIP

How do I choose a different language when translating the entire document?

Follow these steps. Click the Review tab. Click Translate. From the menu that appears, click Choose Translation Language. The Translation Language Options dialog box opens. Click the Translate from and the Translate to and choose languages (A). Click OK.

Track and Review Document Changes

If you share your Word documents with others, you can use the program's Track Changes feature to identify the edits others have made, including formatting changes and text additions or deletions. The Track Changes feature uses different colors for each person's edits, so you can easily distinguish edits made by various people. By default, Word displays changes in Simple Markup view, which indicates, in the left margin, areas that have changes. This section demonstrates how to track and interpret changes.

When you review the document, you decide whether to accept or reject the changes.

Track and Review Document Changes

Turn On Tracking

- 1 Click the **Review** tab on the Ribbon.
- 2 Click **Track Changes** to start monitoring document changes.

3 Edit the document.

The screenshot shows a Microsoft Word document titled "Minutes b4 change tracking.docx - Word". The ribbon menu is visible at the top, with the "REVIEW" tab selected. Under the "REVIEW" tab, the "Track Changes" button is highlighted. The main content area contains the following text:

MINUTES

West School PTA Minutes
September 26, 2012

The meeting was called to order by Terry Adams at 7:00 p.m.

In attendance
[List of attendees]

Approval of Minutes
The minutes were read from the August meeting and approved.

Board
The Board, new principal, and guests were introduced. Kim Abercrombie was nominated as the new Secretary. Tony Wang made a motion to elect Kim, and David Jaffe seconded the motion. All present voted in favor, and Kim Abercrombie was confirmed as the new Secretary.

Advisory Committee
There are a number of parent openings on the Advisory Committee. These openings were listed in the most recent newsletter. Three parents indicated an interest in serving on the committee. Erik Anderson will follow up with those parents and do some additional recruiting to fill these openings.

Budget
The budget for the current school year was distributed by Kim Ralls, PTA Treasurer, and reviewed by the board and PTA members at the last meeting. In tonight's meeting, David Jaffe made a motion to approve the budget which was seconded by Rachel Valdez. All present voted in favor of approving the budget as presented.

A red vertical bar appears in the left margin area to indicate that changes were made to the corresponding line.

A A red vertical bar appears in the left margin area to indicate that changes were made to the corresponding line.

Note: When you open a document containing tracked changes, Simple Markup is the default view. Red vertical bars appear in the left margin to indicate locations where changes were made.

by

Lock and Unlock Tracking

You can control who can turn tracking on and off using the Lock Tracking feature. This feature requires a password to turn off tracking. You no longer need to deal with the situation where you turn on tracking and send out a document for review, and when you get the document back, it contains no change markings because the reviewer turned the Track Changes feature off.

In the past, you needed to use the Compare Documents feature to determine how the reviewed document differed from the original. Now, you can lock tracking.

Lock and Unlock Tracking

Lock Tracked Changes

- ① In the document for which you want to lock tracked changes, click the **Review** tab.
- ② Click **Track Changes** to turn on tracking.

3 Click the down arrow at the bottom of the **Track Changes** button.

4 Click **Lock Tracking**.

The Lock Tracking dialog box appears.

5 Type a password here.

6 Retype the password here.

7 Click **OK**.

Note: Make sure you remember the password or you will not be able to turn off the Track Changes feature.

Word saves the password and the Track Changes button appears gray and unavailable.

Unlock Tracked Changes

MINUTES

West School PTA Minutes
September 24, 2012

The meeting was called to order by Terry Adams at 7:00p.m.

In attendance
[List attendees]

Approval of Minutes
The minutes were read from the August meeting and approved.

Board
The Board, new principal, and guests were introduced. Kim Abercrombie was nominated as the new Secretary. Tony Wang made a motion to elect Kim, and David Jaffe seconded the motion. All present voted in favor, and Kim Abercrombie was confirmed as the new Secretary.

Advisory Committee
There are a number of parent openings on the Advisory Committee. These openings were listed in the most recent newsletter. Three parents indicated an interest in serving on the committee. Erik Andersen will follow up with those parents and do some additional recruiting to fill these openings.

Budget
The budget for the current school year was distributed by Kim Falls, PTA Treasurer, and reviewed by the board and PTA members at the last meeting. In tonight's meeting, David Jaffe made a motion to approve the budget which was seconded by Rachel Valdez. All present voted in favor of approving the budget as presented.

Brinckman's Report

- 1 Open a document with tracked changes locked.
- 2 Click the **Review** tab.
- 3 Click the down arrow at the bottom of the **Track Changes** button.
- 4 Click **Lock Tracking**.

The Unlock Tracking dialog box appears.

- 5 Type the password.
- 6 Click **OK**.

The **Track Changes** button becomes available again so that you can click it and turn off the **Track Changes** feature.

TIP

What happens if I supply the wrong password?

This message box appears. You can retry as many times as you want. If you cannot remember the password, you can create a new version that contains all revisions already accepted, which you can then compare to the original to identify changes. Press **Ctrl+A** to select the entire document. Then press **Shift+←** to unselect just the last paragraph mark in the document. Then press **Ctrl+C** to copy the selection. Start a new blank document and press **Ctrl+V** to paste the selection.

Combine Reviewers' Comments

Suppose that two different people review a document, but they review simultaneously using the original document. When they each return the reviewed document, you have two versions of the original document, each containing potentially different changes. Fortunately, you can combine the documents so that you can work from the combined changes of both reviewers.

When you combine two versions of the same document, Word creates a third file that flags any discrepancies between the versions using revision marks like you see when you enable the Track Changes feature. You can then work from the combined document and evaluate each change.

Combine Reviewers' Comments

Note: To make your screen as easy to understand as possible, close all open documents.

1 Click the Review tab.

2 Click Compare.

3 Click Combine.

The Combine Documents dialog box appears.

4 Click the Open button (📁) for the first document you want to combine.

The Open dialog box appears.

5 Navigate to the folder containing the first file you want to combine.

6 Click the file.

7 Click Open.

The Combine Documents dialog box reappears.

8 Repeat Steps 4 to 7, clicking the Open button (□) for the second document you want to combine.

A You can type a label for changes to each document in these boxes.

9 Click OK.

Word displays four panes.

B The left pane contains a summary of revisions.

C The center pane contains the result of combining both documents.

D The top-right pane displays the document you selected in Step 6.

E The bottom-right pane displays the document you selected in Step 8.

TIPS

Two reviewers reviewed the same document but they forgot to track changes; can I somehow see their changes?

Yes. Follow the steps in this section, but, in Step 3, click **Compare**. Word again displays four panes: the summary appears in the left pane; results of comparing the two documents appear in the center pane; the document you select in Step 6 appears in the top-right pane; and the document you select in Step 8 appears in the bottom-right pane.

How do I save the combined document?

The same way you save any Word document; see Chapter 2 for details.

Work with Comments

You can add comments to your documents. For example, when you share a document with other users, you can use comments to leave feedback about the text without typing directly in the document and others can do the same.

To indicate that a comment was added, Word displays a balloon in the right margin near the commented text. When you review comments, they appear in a block. Your name appears in comments you add, and you can easily review, reply to, or delete a comment, or, instead of deleting the comment, you can indicate that you have addressed the comment.

Work with Comments

Add a Comment

- ① Click or select the text about which you want to comment.
- ② Click the **Review** tab.

③ Click New Comment.

A A comment balloon appears, marking the location of the comment.

B A Comments block appears.

④ Type your comment.

⑤ Click anywhere outside the comment to continue working.

Review a Comment

① While working in Simple Markup view, click a comment balloon.

C Word highlights the text associated with the comment.

D Word displays the Comments block and the text it contains.

Note: To view all comments along the right side of the document, click **Show Comments** in the Comments group on the Review tab.

② Click anywhere outside the comment to hide the Comments block and its text.

Reply to a Comment

① While working in Simple Markup view, click a comment balloon to display its text.

② Click the **Reply to Comment** button (↗).

E Word starts a new comment, indented under the first comment.

③ Type your reply.

④ Click anywhere outside the comment to continue working.

Delete a Comment

- 1 Click the comment that you want to remove.
- 2 Click the **Review** tab.
- 3 Click **Delete**.

Note: You can also right-click a comment and click **Delete Comment**. And, you can delete all comments in the document by clicking the down arrow at the bottom of the **Delete** button and then clicking **Delete All Comments in Document**.

Word deletes the comment.

TIP

Can I indicate that I have addressed a comment without deleting it?

Yes, you can mark the comment as done. Right-click the text of the comment and choose **Mark Comment Done**. Word fades the comment text to light gray.

Comments

Elaine Marmel September 28, 2012

Terry, I made some sentence structure changes to make this information easier to understand.

Part III: Excel

Excel is a powerful spreadsheet program that you can use to enter and organize data and to perform a wide variety of number-crunching tasks. You can use Excel strictly as a program for manipulating numerical data, or you can use it as a database program to organize and track large quantities of data. In this part, you learn how to enter data into worksheets and tap into the power of Excel's formulas and functions to perform mathematical calculations and analysis.

Chapter 9: Building Spreadsheets

Chapter 10: Worksheet Basics

Chapter 11: Working with Formulas and Functions

Chapter 12: Working with Charts

Chapter 9: Building Spreadsheets

Enter Cell Data

You can enter data into any cell in an Excel worksheet. You can type data directly into the cell, or you can enter data using the Formula bar. Data can be text, such as row or column labels, or numbers, which are called *values*. Values also include formulas. Excel automatically left-aligns text data in a cell and right-aligns values.

Long text entries appear truncated if you type additional data into adjoining cells. Values that are too large to fit in a cell might be represented by a series of pound signs. But, Excel offers features to help you remedy these situations.

Enter Cell Data

Type into a Cell

- 1 Click the cell into which you want to enter data.

The cell you clicked is called the *active cell*. It has a thicker border around it than the other cells.

A To add data to another worksheet in your workbook, click the worksheet tab to display the worksheet.

B To magnify your view of the worksheet, click and drag the **Zoom** slider.

2 Type your data.

C The data appears both in the cell and in the Formula bar.

D To store the data in the cell, press **Enter** or click **Enter** (✓).

Note: If you press **Enter**, the cell pointer moves down one row. If you click **Enter** (✓), the cell pointer remains in the cell you clicked in Step 1.

Type Data in the Formula Bar

- 1 Click the cell into which you want to enter data.
- 2 Click in the Formula bar.

- 3 Type your data.
- E The data appears both in the Formula bar and in the cell.

④ Click **Enter** (✓) or press **Enter** to enter the data.

F To cancel an entry, you can click **Cancel** (✗) or press **Esc**.

TIP

What if the data that I type is too long to fit in my cell?

In most cases, Excel expands the column to accommodate your entry. But, suppose that you type a long entry in A1 and then type information into B1. In this case, text in A1 appears truncated or, if A1 contains numbers, they appear as pound signs (#). You can remedy this behavior by resizing column A or by turning on the text wrap feature to increase column A's cell depth. To learn how to resize columns, see the section "Resize Columns and Rows." To learn how to turn on the text wrap feature, see the section "Turn On Text Wrapping."

Select Cells

To edit data or perform mathematical or formatting operations on data in an Excel worksheet, you must first select the cell or cells that contain that data. For example, you might apply formatting to data in a single cell or to data in a group, or *range*, of cells.

Selecting a single cell is easy: You just click the cell. To select a range of cells, you can use your mouse or keyboard. In addition to selecting cells or ranges of cells, you can select the data contained in a cell, as described in the tip.

Select Cells

Select a Range of Cells

- ① Click the cell representing the upper-left corner of the range of cells that you want to select.
- A The cell pointer (⊕) appears as you move the mouse.

2 Click and drag down and to the right across the cells that you want to include in the range.

3 Release the mouse button.

B Excel highlights the selected cells in gray.

C The Quick Analysis button (📊) appears. See Chapter 10 for details about this feature.

D To select all of the cells in the worksheet, you can click here (▲).

You can select multiple noncontiguous cells by pressing and holding **Ctrl** while clicking cells.

Select a Column or Row

3 Month Sales Figures for 2012
(In Thousands)

	January	February	March
widgets	140	135	145
Gadgets	149	163	179
Sedgets	145	189	203
Total Sales			

- 1 Position the mouse pointer over the column letter or row number that you want to select.

The cell pointer changes from to if you positioned the mouse pointer over a column, or if you positioned the mouse pointer over a row.

- 2 Click the column or row.

3 Month Sales Figures for 2012
(In Thousands)

A	January	February	March
widgets	140	135	145
Gadgets	149	163	179
Sedgets	145	189	203
Total Sales			

E Excel selects the entire column or row.

To select multiple contiguous columns or rows, you can click and drag across the column or row headings.

You can select multiple noncontiguous columns or rows by pressing and holding **Ctrl** while clicking column or row headings.

TIPS

How do I select data inside a cell?

Click the cell; then click in the Formula bar and drag over the characters or numbers you want to select. Alternatively, double-click a cell and drag to select the data.

Can I use my keyboard to select a range?

Yes. Use the arrow keys to navigate to the first cell in a range. Next, press and hold **Shift** while using an arrow key (**↑** or **↓**) to select the remaining cells' range.

Faster Data Entry with AutoFill

You can use Excel's AutoFill feature to add a data series to your worksheet or to duplicate a single entry in your worksheet to expedite data entry. You can create number series and, using Excel's built-in lists of common entries, you can enter text series such as a list containing the days of the week or the months in the year. In addition, you can create your own custom data lists, as described in the tip.

When you click a cell, a *fill handle* appears in the lower-right corner of the cell; you use the fill handle to create a series.

Faster Data Entry with AutoFill

AutoFill a Text Series

- ➊ Type the first entry in the text series.
- ➋ Click and drag the cell's fill handle across or down the number of cells that you want to fill.

A ♦ changes to the Fill handle (+).

If you type an entry that Excel does not recognize as part of a list, AutoFill copies the selection to every cell that you drag over.

3 Release the mouse button.

B AutoFill fills in the text series and selects the series.

C The AutoFill Options button () may appear, offering additional options that you can assign to the data.

AutoFill a Number Series

- ➊ Type the first entry in the number series.
- ➋ In an adjacent cell, type the next entry in the number series.
- ➌ Select both cells.

Note: See the previous section, “Select Cells,” to learn more.

- ➍ Click and drag the fill handle across or down the number of cells that you want to fill.

⊕ changes to +.

- ➎ Release the mouse button.

AutoFill fills in the number series and selects the series.

- ➏ The AutoFill Options button () may appear, offering additional options that you can assign to the data.

TIP

How do I create a custom list?

To add your own custom list to AutoFill's list library, first create the custom list in your worksheet cells. Then select the cells containing the list that you want to save. Click the **File** tab and then click **Options**. In the Options dialog box, click the **Advanced** tab. In the General section, click the **Edit Custom Lists** button. In the Custom Lists dialog box, click **Import**. Excel adds your list to the series of custom lists (A). The entries in the list appear here (B). Click **OK** to close the Custom Lists dialog box. Click **OK** again to close the Options dialog box

Turn On Text Wrapping

By default, long lines of text appear on one line in Excel. If you type additional data into adjacent cells, long lines of text appear truncated, but they are not. If you select the cell and look at the Formula bar, you see all of the text.

You can display all of the text by resizing the column width (see the section “Resize Columns and Rows”). Or, you can wrap text within the cell so that some text appears on the next line. When you wrap text, Excel maintains column width and increases the height of the row to accommodate the number of lines that wrap.

Turn On Text Wrapping

- 1 Click the cell in which you want to wrap text.

Note: You can also apply text wrapping to multiple cells. See the section “Select Cells,” earlier in this chapter, to learn how to select multiple cells for a task.

2 Click the **Home** tab.

3 Click the **Wrap Text** button (A).

The screenshot shows a Microsoft Excel spreadsheet titled "3 month sales.xlsx - Excel". The "Home" tab is selected in the ribbon. In the top-left corner of the worksheet, there is a cell containing the text "3 Month Sales Figures for 2012 (In Thousands)". A large blue circle with the letter "A" inside it is drawn over this cell, pointing to the "Wrap Text" button in the ribbon's toolbar. The rest of the spreadsheet contains a table with data for three months: January, February, and March, with categories like Widgets, Gadgets, and Sogdgets.

	January	February	March
Widgets	140	135	145
Gadgets	148	163	179
Sogdgets	365	189	203
Total Sales			

A Excel wraps the text in the cell.

Note: See the section “Resize Columns and Rows” to learn how to adjust cell depth and width to accommodate your data.

Center Data across Columns

You can center data across a range of selected cells in your worksheet. For example, you might want to include a title above multiple columns of information and center it. You can use Excel's Merge and Center command to quickly merge and center the selected cells.

Additional options appear when you click ▾ beside the **Merge and Center** button (

Center Data across Columns

- ① Select the cell containing the data that you want to center, along with the adjacent cells over which you want to center the data.

Note: When you merge and center, Excel deletes any data in selected adjacent cells.

2 Click the **Home** tab.

3 Click the **Merge and Center** button (A).

You can also click the **Merge and Center** ▾ to select from several merge options.

The screenshot shows a Microsoft Excel spreadsheet titled "3 month sales.xlsx - Excel". The ribbon is visible at the top with tabs for FILE, HOME, INSERT, PAGE LAYOUT, FORMULAS, DATA, REVIEW, and VIEW. The HOME tab is selected. The main content is a table titled "3 Month Sales Figures for 2012" (in thousands) for three months: January, February, and March. The table includes rows for Widgets, Gadgets, and Sodas, along with a Total row. The cell containing the title "3 Month Sales Figures for 2012" spans from A1 to D1 and is merged and centered. A callout bubble with the letter "A" points to the "Merge & Center" button in the ribbon's Home tab.

	January	February	March
Widgets	140	135	145
Gadgets	149	163	179
Sodas	165	189	203
Total Sales			

A Excel merges the cells and centers the data.

Adjust Cell Alignment

By default, Excel automatically aligns text to the left and numbers to the right of a cell. It also vertically aligns all data to sit at the bottom of the cell. If you want, however, you can change the horizontal and vertical alignment of data within cells — for example, you can center data vertically and horizontally within a cell to improve the appearance of your worksheet data.

In addition to controlling the alignment of data within a cell, you can also indent data and change its orientation in a cell.

Adjust Cell Alignment

Set Horizontal Alignment

- ① Select the cells that you want to format.
- ② Click the **Home** tab.
- ③ Click an alignment button:

Click the **Align Left** button (\equiv) to align data to the left.

Click the **Center** button (\equiv) to center-align the data.

Click the **Align Right** button (\equiv) to align data to the right.

Note: To justify cell data, click the dialog box launcher (\square) in the Alignment group. In the Format Cells dialog box that appears, click the **Horizontal ▾** and click **Justify**.

Excel applies the alignment to your cells.

The screenshot shows a Microsoft Excel spreadsheet titled "3-month sales.xlsx - Excel". The table has three columns: January, February, and March. The cell containing "March" is highlighted with a purple circle labeled 'A'. The Excel ribbon is visible at the top, and the formula bar shows "January". The table header includes "3 Month Sales Figures for 2012" and "(In Thousands)". The data rows show sales figures for Widgets, Gadgets, and Gadgets, with a total row at the bottom. The "Alignment" tab in the ribbon is selected, and the "Center" button is highlighted with a green box.

	January	February	March
Widgets	140	135	145
Gadgets	140	163	179
Sedgits	165	189	203
Total Sales			

A This example centers the data horizontally.

Set Vertical Alignment

- 1 Select the cells that you want to format.
- 2 Click the **Home** tab.
- 3 Click an alignment button:

Click the **Top Align** button (\equiv) to align data to the top.

Click the **Middle Align** button (\equiv) to align data in the middle.

Click the **Bottom Align** button (\equiv) to align data to the bottom.

Excel applies the alignment to your cells.

A screenshot of Microsoft Excel showing a table of sales data. The title row (A1:D2) is selected and has a green background. A purple circle labeled 'B' points to the center of the cell containing '(In Thousands)'.

	A	B	C	D	E	F	G	H	I	J	K	L	M
1	3 Month Sales Figures for 2012												
2	(In Thousands)												
3		January	February	March									
4	Widgets	140	135	145

21													
22													
23													
24													

B This example aligns the data to the middle of the cell.

TIPS

How do I indent cell data?

To indent data, click the **Increase Indent** button (≡) on the Home tab. To decrease an indent, click the **Decrease Indent** button (≡).

Can I change the orientation of data in a cell?

Yes. For example, you might angle column labels to make them easier to distinguish from one another. To do so, select the cells you want to change, click the **Home** tab, click ▾ next to the **Orientation** button (↔), and click an orientation. Excel applies the orientation to the data in the selected cell or cells.

Change the Font and Size

You can change the font or the font size that you use for various cells in your worksheet. For example, you can make the worksheet title larger than the rest of the data, or you might resize the font for the entire worksheet to make the data easier to read. You can apply multiple formats to a cell — for example, you can change both the font and the font size of any given cell.

If you particularly like the result of applying a series of formatting options to a cell, you can copy the formatting and apply it to other cells in your worksheet.

Change the Font and Size

Change the Font

- 1 Select the cell or range for which you want to change fonts.
- 2 Click the **Home** tab.

3 Click the Font ▾.

You can use ▶ and ▷ to scroll through all of the available fonts.

You can also begin typing a font name to choose a font.

4 Click a font.

The screenshot shows a Microsoft Excel window titled "3 month sales.xlsx - Excel". The ribbon is visible at the top with tabs for FILE, HOME, INSERT, PAGE LAYOUT, FORMULAS, DATA, REVIEW, and VIEW. The HOME tab is selected. In the Font section of the ribbon, there is a dropdown menu with "Arial Black" selected. Below the ribbon, the worksheet "Sheet1" displays a table of sales data. The table has a header row from row 1 to 2. Row 1 contains the title "3 Month Sales Figures for 2012" and the subtitle "(In Thousands)". Row 2 contains the months "January", "February", and "March". Rows 4 through 6 contain data for "Widgets", "Gadgets", and "Sedgets" respectively, with values 140, 135, 145; 149, 163, 179; and 165, 189, 203. Row 7 is labeled "Total Sales". A callout bubble with the letter "A" points to the font dropdown menu in the ribbon.

	E	F	G	H	I	J	K	L	M	N	
1	3 Month Sales Figures for 2012										
2	(In Thousands)										
3		January	February	March							
4	Widgets	140	135	145							
5	Gadgets	149	163	179							
6	Sedgets	165	189	203							
7	Total Sales										

A Excel applies the font.

Change the Font Size

- ① Select the cell or range for which you want to change font size.
- ② Click the **Home** tab.
- ③ Click the **Font Size** ▾.
- ④ Click a size.

B Excel applies the new size to the selected cell or range.

TIPS

Can I apply multiple formatting options at once?

Yes. The Format Cells dialog box enables you to apply a new font, size, or any other basic formatting options to selected data. To open it, click the **Home** tab and click the dialog box launcher () in the Font group.

How can I copy cell formatting?

Select the cell or range that contains the formatting you want to copy. Then, click the **Home** tab, and click the **Format Painter** button () in the Clipboard group. Then click and drag over the cells to which you want to apply the formatting and release the mouse button to copy the formatting.

Change Number Formats

You can use number formatting to control the appearance of numerical data in your worksheet. For example, if you have a column of prices, you can format the data as numbers with dollar signs and decimal points. If prices listed are in a currency other than dollars, you can indicate that as well.

Excel offers several different number categories, or styles, to choose from. These include Currency styles, Accounting styles, Date styles, Time styles, Percentage styles, and more. You can apply number formatting to single cells, ranges, columns, rows, or an entire worksheet.

Change Number Formats

- ① Select the cell, range, or data that you want to format.
- ② Click the **Home** tab.
- ③ Click the **Number Format** ▾.
- ④ Click a number format.

Excel applies the number format to the data.

- A Click the **Accounting Number Format** button ($\$$) to quickly apply dollar signs to your data. Click the button's \downarrow to specify a different currency symbol, such as Euro.
- B Click the **Percent Style** button ($\%$) to quickly apply percent signs to your data.
- C Click the **Comma Style** button ($,$) to quickly display commas in your number data.
- D Click the dialog box launcher (\square) in the Number group to open the Format Cells dialog box and display additional number-formatting options.

Increase or Decrease Decimals

You can control the number of decimal places that appear in numbers using the Increase Decimal and Decrease Decimal buttons. You may want to increase the number of decimal places shown in a cell if your worksheet contains data that must be precise to be accurate, as with worksheets containing scientific data. If the data in your worksheet is less precise, you might reduce the number of decimal places shown. Depending on the purpose of your worksheet's sales data, you might show two decimal places or no decimal places.

Increase or Decrease Decimals

- ① Select the cell or range for which you want to adjust the number of decimal places displayed.
- ② Click the **Home** tab.
- ③ Click a decimal button:

You can click the **Increase Decimal** button (.) to increase the number

of decimal places displayed.

You can click the **Decrease Decimal** button (.) to decrease the number of decimal places displayed.

Excel adjusts the number of decimals that appear in the cell or cells.

The screenshot shows a Microsoft Excel spreadsheet titled "3 month sales.xlsx - Excel". The spreadsheet contains a table of sales figures for three months: January, February, and March. The columns are labeled "January", "February", and "March". The rows represent different product categories: Widgets, Gadgets, Gadgets, and Total Sales. The cell C5, which contains the value "140.0", is highlighted with a green border. A purple callout bubble with the letter "A" inside points to this cell. The Excel ribbon is visible at the top, showing tabs like FILE, HOME, INSERT, PAGE LAYOUT, FORMULAS, DATA, REVIEW, and VIEW. The status bar at the bottom shows "READY", "AVERAGE: 163.1", "COUNT: 9", "SUM: 1,480.0", and "100%".

	January	February	March
Widgets	140.0	135.0	145.0
Gadgets	149.0	163.0	179.0
Sedgets	165.0	189.0	209.0
Total Sales			

A In this example, Excel adds a decimal place.

You can click the **Increase Decimal** button (.) again to add another decimal.

Add Cell Borders and Shading

By default, Excel displays gridlines separating each cell to help you enter data, but the gridlines do not print (also by default). You can print gridlines or hide them from view.

Alternatively, you can add printable borders to selected worksheet cells to help define the contents or more clearly separate the data from surrounding cells. You can add borders to all four sides of a cell or to just one, two, or three sides.

You can also apply shading to selected worksheet cells to help set apart different data.

Add Cell Borders and Shading

Add Quick Borders

- ① Select the cell or range around which you want to place a border.
- ② Click the **Home** tab.

3 Click ▾ beside the **Borders** button (▣ ▾).

Note: To apply the current border selection shown on the button, simply click the **Borders** button (▣ ▾).

4 Click a border style.

The screenshot shows a Microsoft Excel spreadsheet titled "3 month sales.xlsx". The spreadsheet contains a table with the following data:

	January	February	March
Widgets	140	135	145
Gadgets	149	163	179
Sedgets	145	189	203
Total Sales			

A Excel assigns the borders to the cell or range.

Add a Fill Color

- 1 Select the cells to which you want to apply a fill color.
- 2 Click the **Home** tab.
- 3 Click ▾ beside the **Fill Color** button ().
- 4 Select a fill color.

Note: Remember, if the color you select is too dark, your data can become difficult to read.

A screenshot of Microsoft Excel showing a table titled "3 Month Sales Figures for 2012 (In Thousands)". The table has columns for January, February, and March. The first row contains product names: Widgets, Gadgets, and Sledgets. The second row contains total sales figures: 140, 149, and 145 respectively. The cell at row 1, column 1 (G1) is selected and highlighted with a green fill color. A callout bubble with the letter "B" points to this green fill color.

	January	February	March
Widgets	140	135	145
Gadgets	149	163	179
Sledgets	145	189	203
Total Sales			

B Excel applies the fill color to the selected cell or range.

TIP

Can I turn worksheet gridlines on and off?

Yes. Printing gridlines makes worksheet data easier to read on paper. On the other hand, you might want to turn off gridlines on-screen during a presentation. To use options on the **Page Layout** tab to control the appearance of gridlines, click the **Page Layout** tab. In the Sheet Options group, deselect **View** to hide gridlines on-screen (changes to). Select **Print** (changes to) to print gridlines.

Format Data with Styles

You can use the Excel styles to apply preset formatting to your worksheet data. You can apply cell styles to individual cells or ranges of cells, or table styles to a range of worksheet data. When you apply a table style, Excel converts the range into a table. Tables help you manage and analyze data independent of other data in the worksheet. For example, beside each column heading in a table, an AutoFilter ▾ appears. You can use the AutoFilter ▾ to show only certain information in the table.

You can also apply a theme — a predesigned set of formatting attributes — to a worksheet. See the tip for more details.

Format Data with Styles

Apply a Cell Style

- 1 Select the cell or range that you want to format.
- 2 Click the **Home** tab.

3 Click Cell Styles.

4 Click a style.

B Excel applies the formatting style.

C AutoFilter down arrows (▼) appear in the column headings.

TIP

How do I apply a theme?

You can use themes to create a similar appearance among all the Office documents that you create. To apply a theme, click the **Page Layout** tab, click the **Themes** button, and select a theme from the list.

Apply Conditional Formatting

You can use Excel's Conditional Formatting tool to apply certain formatting attributes, such as bold text or a fill color, to a cell when the value of that cell meets a required condition. For example, if your worksheet tracks weekly sales, you might set up Excel's Conditional Formatting tool to alert you if a sales figure falls below what is required for you to break even.

In addition to using preset conditions, you can create your own. To help you distinguish the degree to which various cells meet your conditional rules, you can also use color scales and data bars.

Apply Conditional Formatting

Apply a Conditional Rule

- 1 Select the cell or range to which you want to apply conditional formatting.
- 2 Click the **Home** tab.

- 3 Click Conditional Formatting.**
- 4 Click Highlight Cells Rules or Top/Bottom Rules.**

This example uses Top/Bottom Rules.

- 5 Click the type of rule that you want to create.**

A rule dialog box appears.

- 6 Specify the values that you want to assign for the condition.**

- 7 Click OK.**

A If the value of a selected cell meets the condition, Excel applies the conditional formatting.

Apply Data Bars

A screenshot of Microsoft Excel showing the ribbon at the top. The 'HOME' tab is highlighted with a red circle labeled '2'. A dropdown menu is open under the 'Conditional Formatting' button in the ribbon, with a red circle labeled '3' on it. The 'Data Bars' option is highlighted with a red circle labeled '4'. A purple callout labeled 'B' points to the 'Color Scales' and 'Icon Sets' options. A red circle labeled '5' points to the 'More Rules...' option at the bottom of the list.

Student	Class	Mid-Term	Final	Test Score Aver.

C Excel applies the data bars to the selection. Longer data bars represent higher values in your selection.

TIPS

How do I create a new rule for conditional formatting?

Click the **Conditional Formatting** button on the Home tab and then click **New Rule** to open the New Formatting Rule dialog box. Here, you define the condition of the rule as well as what formatting you want to apply when the condition is met.

How do I remove conditional formatting from a cell?

Select the range that contains the formatting you want to remove, click the **Conditional Formatting** button on the Home tab, and then click **Manage Rules**. Next, click the rule you want to remove, click **Delete Rule**, and then click **OK**.

Add Columns and Rows

You can add columns and rows to your worksheets to include more data. For example, you may have typed product names in the rows of a worksheet that shows product sales over a period of time, but you did not include the region in which those products were sold. Now you find that you need to add region designations as row titles to segregate sales by region as well as by product.

You are not limited to inserting new columns and rows one at a time; if you want, you can insert multiple new columns and rows at once.

Add Columns and Rows

Add a Column

- ① Click the letter of the column that should appear to the right of the new column you want to insert.
- ② Click the **Home** tab.

③ Click Insert.

You can also right-click a column heading and click **Insert**.

The screenshot shows a Microsoft Excel spreadsheet titled "2013-Sales Report.xlsx". The data is organized by region (North, South) and product type (Widgets, Gadgets, Gadgets). A new column has been inserted between columns C and D, labeled "3 Month Total". The "Insert Options" button (a small arrow icon) is visible in the top right corner of the newly inserted column's header area. The ribbon at the top shows the "Insert" tab is selected. The status bar at the bottom indicates "READY".

Sedgets	178	202	216	203	193	196	\$ 1,188
Total Sales	\$ 921	\$ 1,013	\$ 1,093	\$ 1,077	\$ 1,081	\$ 1,105	\$ 3,262

- 1 Click the number of the row that should appear below the new row you want to insert.
- 2 Click the **Home** tab.
- 3 Click **Insert**.

You can also right-click a row number and click **Insert**.

The screenshot shows the Microsoft Excel ribbon with the "INSERT" tab selected. In the top right corner of the ribbon, there is a "Cells" group containing several icons. A context menu is open over the row number "10", listing options such as "Insert", "Delete", and "Format". The "Insert" option is highlighted with a red circle and the letter "C". Another red circle and the letter "D" are placed near the "Insert" option in the menu. A red arrow points from the text "1" to the row number "9" in the worksheet.

	January	February	March	April	May	June	Total Sales
North							
Widgets	127	135	145	139	146	152	\$ 844
Gadgets	149	163	179	190	195	198	\$ 1,074
Sedgets	165	189	203	190	180	183	\$ 1,110
Widgets	140	148	158	152	159	165	\$ 922

Total Sales	\$ 921	\$ 1,013	\$ 1,093	\$ 1,077	\$ 1,081	\$ 1,105	\$ 3,262

C Excel adds a row.

D The Insert Options button () appears, and you can click it to view a list of options that you can assign.

TIPS

How can I insert multiple columns and rows?

First, select two or more columns and rows in the worksheet; then activate the Insert command as described in this section. Excel adds the same number of new columns and rows as the number you originally selected.

What options appear when I click the Insert Options button?

For a new row, you can select **Format Same As Above**, **Format Same As Below**, or **Clear Formatting** ( changes to Format Same As Left, **Format Same As Right**, or **Clear Formatting** ( changes to 

Resize Columns and Rows

Values that are too large to fit in a cell might appear as pound signs. Long lines of text appear on one line; if you type additional data into adjoining cells, long lines appear truncated, but they are not. If you select one of these cells and look at the Formula bar, you see the value or the text. To display long text in the worksheet, you can wrap it within the cell as described in the section “Turn On Text Wrapping,” or you can resize the column. To display large values in the worksheet, you can resize the column. You can also resize rows.

Resize Columns and Rows

- ① Position the mouse pointer on the right edge of the column letter or the bottom edge of the row number that you want to resize. The pointer changes to + or +.
- ② Click and drag the edge to the desired size.

A A dotted line marks the new edge of the column or row as you drag, and Excel displays the new column width or row height.

3 Release the mouse button.

Excel resizes the column or row.

B You can also select a column or row, click the **Format** button on the Home tab, and from the menu that appears, click **AutoFit Column Width** or **AutoFit Row Height** to resize the column or row to fit existing text.

Freeze Column and Row Titles On-Screen

When you work with a worksheet that contains more information than will fit on one screen, you can freeze one or more columns or rows to keep information in those columns and rows on-screen, regardless of where you place the cell pointer.

Freezing the top row of your worksheet is very useful when it contains headings for columns of information stored on the rows below. Similarly, freezing the leftmost column of your worksheet is very useful when titles for each row of data appear in the left column.

Freeze Column and Row Titles On-Screen

Note: To freeze both a column and a row, click the cell to the right of the column and below the row that you want visible on-screen at all times.

The screenshot shows a Microsoft Excel spreadsheet titled '2013-table.xlsx - Excel'. The ribbon is visible with the 'VIEW' tab selected. In the 'View' tab's ribbon group, the 'Freeze Panes' button is highlighted with a red circle labeled '1'. A dropdown menu is open from this button, containing three options: 'Freeze Panes' (selected), 'Keep rows and columns visible while the rest of the worksheet scrolls (based on current selection)', 'Freeze Top Row' (with a red circle labeled '2'), and 'Freeze First Column' (with a red circle labeled '3'). The main spreadsheet area displays a table with columns for Date, Amount, Account Type, Opened By, Branch, and Customer. The first few rows are highlighted in blue, indicating they are frozen. The bottom status bar shows 'Sheet1' and 'Sheet2' tabs, and the zoom level is set to 100%.

Date	Amount	Account Type	Opened By	Branch	Customer
12/2/2012	19.95	VOIP Phone	Direct Sales	Phoenix	Existing
12/2/2012	39.95	Internet	Customer Service	Phoenix	Existing
12/2/2012	39.95	Internet	Customer Service	Phoenix	New
12/2/2012	99.95	Package	Direct Sales	Phoenix	Existing
12/2/2012	19.95	VOIP Phone	Customer Service	East Valley	Existing
12/2/2012	39.95	Internet	Direct Sales	Phoenix	New
12/2/2012	99.95	Package	Customer Service	West Valley	Existing
12/2/2012	39.95	Internet	Direct Sales	East Valley	Existing
12/2/2012	59.95	TV	Customer Service	East Valley	Existing
12/2/2012	99.95	Package	Direct Sales	East Valley	New

12/2/2012	99.95	Package	Customer Service	West Valley	Existing
12/2/2012	99.95	Package	Customer Service	East Valley	Existing
12/2/2012	59.95	TV	Direct Sales	Phoenix	Existing
12/2/2012	19.95	VOIP Phone	Customer Service	East Valley	Existing
12/2/2012	39.95	Internet	Customer Service	West Valley	Existing
12/2/2012	99.95	Package	Direct Sales	Phoenix	New

1 Click the **View** tab.

2 Click **Freeze Panes**.

3 Click a choice for freezing.

You can choose **Freeze Panes**, which freezes both a row of column headings and a column of row titles, or you can choose **Freeze Top Row** or **Freeze First Column**.

This example freezes the top row.

Excel freezes the areas you identified.

4 Press **Page down** or **Alt+Page down** to scroll down one screen or one screen to the right.

A The frozen columns or rows remain on-screen.

B To unlock the columns and rows, click the **Freeze Panes** ▾ and then click **Unfreeze Panes**.

Note: Freezing columns and rows only affects on-screen work; it does not affect printing.

Name a Range

You can assign distinctive names to the cells and ranges of cells in a worksheet. A *range* is a rectangular group of cells; a range can also consist of a single cell. Assigning names to cells and ranges can help you more easily identify their contents. You can also use range names in formulas, which can help you decipher a formula. (Formulas are discussed later in this book.) Note that when it comes to naming ranges, you must follow some rules, as discussed in the tip at the end of this section.

Name a Range

Assign a Range Name

- ① Select the cells comprising the range that you want to name.
- ② Click the **Formulas** tab.
- ③ Click **Define Name**.

The New Name dialog box opens.

Note: Excel suggests a name using a label near the selected range. If you like the suggested name, skip Step 4.

④ Type a name for the selected range in the **Name** field.

A You can add a comment or note about the range here. For example, you might indicate what data the range contains.

⑤ Click **OK**.

Excel assigns the name to the cells.

The screenshot shows a Microsoft Excel spreadsheet titled "Range Name.xlsx - Excel". The ribbon is visible at the top with tabs for FILE, HOME, INSERT, PAGE LAYOUT, FORMULAS, DATA, REVIEW, and VIEW. The FORMULAS tab is selected. In the center of the ribbon, there is a "Name Manager" button. Below the ribbon, the status bar shows "READY". The main area of the spreadsheet displays a table titled "6 Month Sales Figures for 2012" (in thousands). The table has columns for January through June and a "Total Monthly Sales" column. Row 4 is labeled "Widgets" and contains the values 127, 135, 145, 139, 146, and 152. The value 127 is highlighted with a green selection bar. A blue arrow labeled "B" points to the Name box in the formula bar, which contains the text "Widgets". The status bar at the bottom also shows "Widgets" as the current name.

	January	February	March	April	May	June	Total Monthly Sales
4 Widgets	127	135	145	139	146	152	844
5 Gadgets	149	163	179	190	195	198	1074
6 Sodgets	165	189	203	190	180	183	1110
7 Total Product Sales	441	487	527	519	521	533	3028

B When you select the range, its name appears in the Name box.

Select a Named Range

The screenshot shows the Microsoft Excel ribbon with the 'FORMULAS' tab selected. In the 'Defined Names' section of the ribbon, there is a 'Name Manager' button. A red circle labeled '1' is drawn around the 'Name Manager' button. A red circle labeled '2' is drawn around the 'Widgets' entry in the list below it. The list contains four entries: 'Widgets', 'Gadgets', 'Sedgets', and 'Total Product Sales'. The 'Widgets' entry is highlighted with a green selection bar.

	January	February	March	April	May	June	Total Product Sales
Widgets	127	135	145	139	146	152	848
Gadgets	149	163	179	190	195	198	1074
Sedgets	165	189	203	190	180	183	1110
Total Monthly Sales	441	487	527	519	521	533	3028

- 1 Click the Name ▾.
- 2 Click the name of the range of cells you want to select.

The screenshot shows the same Microsoft Excel interface as the first one, but now the range 'Widgets' has been selected. The cells from B4 to G4 are highlighted with a green selection bar. A large blue circle labeled 'C' is drawn over the cell containing the value '127'.

	January	February	March	April	May	June	Total Product Sales
Widgets	127	135	145	139	146	152	848
Gadgets	149	163	179	190	195	198	1074
Sedgets	165	189	203	190	180	183	1110
Total Product Sales	441	487	527	519	521	533	3028

C Excel selects the cells in the range.

Note: You can use the Name Manager to make changes to your range

names. Click the **Name Manager** button on the Formulas tab. You can edit existing range names, change the cells referenced by a range, or remove ranges to which you no longer need names assigned in the worksheet.

TIP

What are the rules for naming ranges?

Each name can be no more than 255 characters and must be unique. You can use uppercase and lowercase letters in a range name, but Excel ignores case — sales and SALES are the same name. The first character must be a letter, an underscore (_), or a backslash (\). You cannot use spaces in a range name; instead, substitute the underscore or the dash. You cannot name a range using cell references such as A1 or \$F\$6, nor can you name a range using either the uppercase or lowercase forms of the letters C and R.

Clear or Delete Cells

You can clear the formatting applied to a cell, the contents of the cell, any comments you assigned to the cell, any hyperlink formatting in the cell, or all of these elements. Clearing a cell is useful when you want to return the cell to its original state in Excel and you do not want to apply all of Excel's original formats manually.

You can also delete rows or columns of data. When you delete rows or columns, Excel adjusts the remaining cells in your worksheet, shifting them up or to the left to fill any gap in the worksheet structure.

Clear or Delete Cells

Clear Cells

- ① Select the cell or range containing the data or formatting that you want to remove.
- ② Click the **Home** tab.

3 Click the **Clear** button ().

4 Choose an option to identify what you want to clear.

This example clears formats.

The screenshot shows an Excel spreadsheet titled "Range NameList - Excel". The ribbon is visible at the top with tabs like FILE, HOME, INSERT, PAGE LAYOUT, FORMULAS, DATA, REVIEW, and VIEW. The "HOME" tab is selected. The formula bar shows "K4". The main area contains a table titled "6 Month Sales Figures for 2012 (in Thousands)". The table has columns for January through June and a "Total Monthly Sales" column. Row 4 contains data for "Widgets": 127, 135, 145, 139, 146, 152, and a total of 844. Row 5 contains data for "Gadgets": 149, 168, 179, 190, 195, 198, and a total of 1174. Row 6 contains data for "Sedgets": 165, 189, 203, 190, 180, 183, and a total of 1110. Row 7 is a summary row for "Total Product Sales" with values 481, 487, 527, 519, 521, 533, and a total of 3226. The cell H4 is selected and highlighted with a green border. A purple callout bubble with the letter "A" inside it points to the "Format" button in the ribbon's "Editing" tab.

	January	February	March	April	May	June	Total Monthly Sales
Widgets	127	135	145	139	146	152	844
Gadgets	149	168	179	190	195	198	1174
Sedgets	165	189	203	190	180	183	1110
Total Product Sales	481	487	527	519	521	533	3226

A Excel clears the cell using the option you selected in Step 4.

In this example, Excel clears the formatting but retains the cell data.

Delete Rows or Columns

- 1 Click the number of the row or the letter of the column that you want to delete.

This example deletes a column.

- 2 Click the **Home** tab.

- 3 Click **Delete**.

You can also right-click a row number or column heading and click **Delete**.

	A	B	C	D	E	F	G	H	I	J	K	L	M	N
6 Month Sales Figures for 2012														
(in Thousands)														
Widgets	127	135	145	139	146		Total Monthly Sales							
Gadgets	149	163	179	190	195									
Sedgets	165	189	203	190	180									
Total Product Sales	441	487	527	519	521		2495							

B Excel deletes the row or column and moves remaining data up or to the left to fill any gap in the worksheet structure.

TIP

What is the difference between Clear Formats and Clear Contents?

Clear Formats removes just the formatting of a cell or range and leaves the contents of the cell or range. You retain the data and can reformat the cell or range; this command is most useful when you have applied several different formats and do not like the results. In a sense, Clear Formats lets you start over. Clear Contents, on the other hand, deletes the data in the cell but retains the cell's formatting. In this case, you can enter new data and it displays the same formatting as the data you cleared.

Split and Format a Column of Data

You can split a column of data into multiple columns. The Text to Columns feature is particularly useful when you open a list from another program. Typically, the information shows up on each row in one long string, but you want the information divided into columns.

After dividing the information, you can use the Flash Fill feature to format the data the way you want. With Flash Fill, you provide examples and, in most cases, Excel understands what you want.

Note that you can use Flash Fill in regular Excel files as well as text files you import.

Split and Format a Column of Data

Convert Text to Columns

① Open the file containing the data you want to format.

The Text Import Wizard appears.

Note: If the Text Import Wizard does not appear, click the **Data** tab and then click **Text to Columns** in the Data Tools group.

2 Select Delimited (changes to).

3 Click Next.

4 Select the delimiter your file uses (changes to).

5 Click Finish.

The screenshot shows a Microsoft Excel spreadsheet titled "Flash Fill1.txt - Excel". The ribbon is visible at the top with tabs like FILE, HOME, INSERT, PAGE LAYOUT, FORMULAS, DATA, REVIEW, and VIEW. The "HOME" tab is selected. In the top-left corner, there's a blue arrow labeled 'A'. The main area contains a table with columns: SSN, First Name, Last Name, Middle Name, Address, City, State, and Postal Code. The first row has bolded column headers. The second row (cell A2) contains the value "433664341 433-66-4341". The third row (cell A3) contains the value "245505990". The fourth row (cell A4) contains the value "687444792". The fifth row (cell A5) contains the value "254831497". The sixth row (cell A6) contains the value "129645110". The seventh row (cell A7) contains the value "207253950". The eighth row (cell A8) contains the value "577110796". The ninth row (cell A9) contains the value "265871154". The tenth row (cell A10) contains the value "649624395". The "Flash Fill" button is located in the bottom-left corner of the ribbon.

SSN	First Name	Last Name	Middle Name	Address	City	State	Postal Code
433664341 433-66-4341	nancy	le	ew	18 1st Ave	Seattle	wa	98101

649624395	anne	hellung-limarie	l	894 9th Av	Seattle	wa	98106

A The file appears on-screen in columnar format. You can widen the columns and, if you like, apply bold formatting to column headings.

Using Flash Fill Formatting

① Insert a column beside the one you want to format and give it the same name as the one you want to format.

This example inserts column B.

② Type the first entry from the original column into the inserted column using the format you want.

This example types the contents of cell A2 into cell B2, supplying dashes.

③ Start typing the second entry.

B Excel applies the formatting of the entry above to the current entry.

C Excel suggests the same formatting for all remaining entries in the column.

④ Press **Enter** to accept the formatting into the column.

⑤ Repeat these steps for each column you need to format. When you finish, you can delete the original columns.

TIPS

How do I know which delimiter to select?

When you see your data separated in the Data Preview box at the bottom of the second Text Import Wizard dialog box, you know you have selected the delimiter you need.

How do I get the Flash Fill feature to insert leading zeros in a ZIP code?

Before formatting using Flash Fill, format the column you insert as a Text column; click the **Home** tab and, in the Number group, click the dialog box launcher (). In the Format Cells dialog box, click **Text** and then click **OK**.

Chapter 10: Worksheet Basics

Add a Worksheet

By default, when you create a new blank workbook in Excel, it contains one worksheet, which may be adequate. In some cases, however, your workbook might require additional worksheets in which to enter more data. For example, if your workbook contains data about products your company sells, you might want to add worksheets for each product category. You can easily add worksheets to a workbook.

When you add a new worksheet, Excel gives it a default name. To help you better keep track of your data, you can rename your new worksheet. For more information, see the next section, “Name a Worksheet.”

Add a Worksheet

- 1 Click the **Insert Worksheet** button (⊕).

You can also right-click a worksheet tab and click **Insert** to open the Insert dialog box, where you can choose to insert a worksheet.

A Excel adds a new blank worksheet and gives it a default worksheet name.

Name a Worksheet

When you create a new workbook, Excel assigns default names to each worksheet in the workbook. Likewise, Excel assigns a default name to each worksheet you add to an existing workbook.

To help you identify their content, you can change the names of your Excel worksheets to something more descriptive. For example, if your workbook contains four worksheets, each detailing a different sales quarter, then you can give each worksheet a unique name, such as Quarter 1, Quarter 2, and so on.

Name a Worksheet

- ① Double-click the worksheet tab that you want to rename.
Excel highlights the current name.
You can also right-click the worksheet name and click **Rename**.
- ② Type a new name for the worksheet.

3 Press **Enter**.

The screenshot shows a Microsoft Excel window with the title bar "Sheet Name.xlsx - Excel". The ribbon tabs are FILE, HOME, INSERT, PAGE LAYOUT, FORMULAS, DATA, REVIEW, and VIEW. The HOME tab is selected. The status bar at the bottom says "READY". A callout bubble with the letter "A" points to the "Ctrl2" key on the keyboard.

2nd Quarter Sales for 2012
(in Thousands)

	April	May	June	Total Sales
Widgets	139	146	152	\$ 437
Gadgets	190	195	198	\$ 583
Sedgetts	190	180	183	\$ 553
Total Sales	\$ 519	\$ 521	\$ 533	\$ 1,572

A Excel assigns the new worksheet name.

Change Page Setup Options

You can change worksheet settings related to page orientation, margins, paper size, and more. For example, suppose that you want to print a worksheet that has a few more columns than will fit on a page in Portrait orientation. (Portrait orientation accommodates fewer columns but more rows on the page and is the default page orientation that Excel assigns.) You can change the orientation of the worksheet to Landscape, which accommodates more columns but fewer rows on a page.

You can also use Excel's page-setup settings to establish margins and insert page breaks to control the placement of data on a printed page.

Change Page Setup Options

Change the Page Orientation

A Dotted lines identify page breaks that Excel inserts.

1 Click the Page Layout tab.

2 Click Orientation.

3 Click Portrait or Landscape.

Note: Portrait is the default orientation.

Excel applies the new orientation. This example applies Landscape.

The screenshot shows a Microsoft Excel spreadsheet titled "2013-conditional-formatting.xlsx". The ribbon is visible at the top with the "PAGE LAYOUT" tab selected. A callout labeled "C" points to the "Margins" button in the "Page Setup" group. Another callout labeled "B" points to the page break indicator, which has moved from its original position to the right edge of the data area. The data consists of 30 rows of sales information, including columns for Date, Amount, AcctType, OpenedBy, Branch, and Customer. The "Customer" column is currently selected. The "Orientation" dropdown in the ribbon is set to "Landscape".

Date	Amount	AcctType	OpenedBy	Branch	Customer
12/2/2012	17,000	Internet	Direct Sales	Phoenix	Existing
12/2/2012	400	TV	Customer Service	Phoenix	Existing

12/2/2012	7,277	IRA	Customer Service	East Valley	Existing
12/2/2012	4,000	TV	Direct Sales	East Valley	Existing

B Excel moves the page break indicator based on the new orientation.

C You can click the Margins button to set up page margins.

Insert a Page Break

The screenshot shows a Microsoft Excel spreadsheet titled "2013-conditional-formatting.xlsx". The "Page Layout" tab is selected. A red circle labeled "1" points to row 31. A red circle labeled "2" points to the "Page Layout" tab. A red circle labeled "3" points to the "Breaks" button in the ribbon. A red circle labeled "4" points to the "Insert Page Break" option in the dropdown menu.

39	12/2/2012		15,703	Internet	Customer Service	Phoenix	Existing					

D Excel inserts a solid line representing a user-inserted page break.

TIPS

How do I print just part of a worksheet?

To print only a part of a worksheet, select the cells that you want to print, click the **Page Layout** tab on the Ribbon, click the **Print Area** button, and then click **Set Print Area**. Then print as usual.

Can I set different margins for different pages that I print?

Yes. Excel assigns the same margins to all pages of a worksheet. If you need different margins for different sections that you plan to print, place each section for which you need different margins on separate worksheets and set each worksheet's margins accordingly.

Move and Copy Worksheets

You can move or copy a worksheet to a new location within the same workbook, or to an entirely different workbook. For example, moving a worksheet is helpful if you insert a new worksheet and the worksheet tab names appear out of order. Or, you might want to move a worksheet that tracks sales for the year to a new workbook so that you can start tracking for a new year.

In addition to moving worksheets, you can copy them. Copying a worksheet is helpful when you plan to make major changes to the worksheet.

Move and Copy Worksheets

- 1 If you plan to move a worksheet to a different workbook, open both workbooks and select the one containing the worksheet you want to move.

- 2 Click the tab of the worksheet you want to move or copy to make it

the active worksheet.

③ Click the **Home** tab.

④ Click **Format**.

⑤ Click **Move or Copy Sheet**.

The Move or Copy dialog box appears.

A You can click to select a workbook for the worksheet.

⑥ Click the location where you want to place the worksheet that you are moving.

Note: Excel moves or copies sheets in front of the sheet you select.

B You can copy a worksheet by selecting **Create a Copy** (changes to).

⑦ Click **OK**.

Excel moves or copies the worksheet to the new location.

Delete a Worksheet

You can delete a worksheet that you no longer need in your workbook. For example, you might delete a worksheet that contains outdated data or information about a product that your company no longer sells.

When you delete a worksheet, Excel prompts you to confirm the deletion unless the worksheet is blank, in which case it simply deletes the worksheet. As soon as you delete a worksheet, Excel permanently removes it from the workbook file and displays the worksheet behind the one you deleted, unless you deleted the last worksheet. In that case, Excel displays the worksheet preceding the one you deleted.

Delete a Worksheet

① Right-click the worksheet tab.

② Click **Delete**.

Note: You can also click the **Delete ▾** on the **Home** tab and then click **Delete Sheet**.

If the worksheet is blank, Excel deletes it immediately.

If the worksheet contains any data, Excel prompts you to confirm the deletion.

③ Click Delete.

Excel deletes the worksheet.

Find and Replace Data

You can search for information in your worksheet and replace it with other information. For example, suppose that you discover that Northwest Valley was entered repeatedly as West Valley. You can search for West Valley and replace it with Northwest Valley. Be aware that Excel finds all occurrences of information as you search to replace it, so be careful when replacing all occurrences at once. You can search and then skip occurrences that you do not want to replace.

You can search an entire worksheet or you can limit the search to a range of cells that you select before you begin the search.

Find and Replace Data

- ① Click the **Home** tab.
- ② Click **Find & Select**.
- ③ Click **Replace**.

A To simply search for information, click **Find**.

Excel displays the Replace tab of the Find and Replace dialog box.

- ④ Type the information for which you want to search here.

- ⑤ Type the information that you want Excel to use to replace the information you typed in Step 4.

- ⑥ Click **Find Next**.

Date	Amount	AddType	OpenedBy	Branch	Customer
12/2/2012	17,000	Internet	Direct Sales	Phoenix	Existing
12/2/2012	400	TV	Customer Service	Phoenix	Existing

12/2/2012	245	TV	Customer Service	East Valley	Existing
12/2/2012	13,428	Internet	Customer Service	Phoenix	Existing
12/2/2012	7,277	IRA	Customer Service	East Valley	Existing
12/2/2012	4,000	TV	Direct Sales	East Valley	Existing

B Excel finds the first occurrence of the data.

7 Click **Replace**.

Excel replaces the information in the cell.

C Excel finds the next occurrence automatically.

8 Repeat Step 7 until you replace all appropriate occurrences.

Note: You can click **Replace All** if you do not want to review each occurrence before Excel replaces it.

Excel displays a message when it cannot find any more occurrences.

9 Click **OK** and then click **Close** in the Find and Replace dialog box.

TIPS

Where can I find detailed search options?

Click the **Options** button in the Find and Replace dialog box to reveal additional search options. For example, you can search by rows or columns, matching data, and more. You can also search for specific

formatting or special characters using Format options.

How can I search for and delete data?

In the Find and Replace dialog box, type the text you want to delete in the **Find what** box; leave the **Replace with** box empty. When you click **Replace**, Excel looks for the data and deletes it without adding new data to the worksheet.

Create a Table

You can create a table from any rectangular range of related data in a worksheet. A *table* is a collection of related information. Table rows — called *records* — contain information about one element, and table columns divide the element into *fields*. In a table containing name and address information, a record would contain all the information about one person, and all first names, last names, addresses, and so on would appear in separate columns.

When you create a table, Excel identifies the information in the range as a table and simultaneously formats the table and adds AutoFilter arrows to each column.

Create a Table

The screenshot shows a Microsoft Excel spreadsheet titled "Create a table-BeforeTable - Excel". The ribbon at the top includes tabs for FILE, HOME, INSERT, PAGE LAYOUT, FORMULAS, DATA, REVIEW, and VIEW. The HOME tab is selected. The status bar at the bottom indicates "Sheet1" and "READY".

The data consists of 25 rows and 7 columns, starting with headers in row 1:

	Date	Amount	AcctType	Opened By	Branch	Customer
1	12/2/2010	17000	Internet	Direct Sales	Phoenix	Existing
2	12/2/2010	400	TV	Customer Service	Phoenix	Existing
3	12/2/2010	3175	TV	Customer Service	West Valley	Existing
4	12/2/2010	4000	VOIP Phone	Customer Service	Phoenix	Existing
5	12/2/2010	2000	IR&A	Customer Service	West Valley	Existing
6	12/2/2010	14548	Internet	Customer Service	Phoenix	Existing
7	12/2/2010	240	TV	Customer Service	Phoenix	Existing
8	12/2/2010	6307	VOIP Phone	Direct Sales	East Valley	Existing
9	12/2/2010	11000	Internet	Customer Service	Phoenix	New
10	12/2/2010	35000	Internet	Customer Service	Phoenix	Existing
11	12/2/2010	4535	TV	Customer Service	East Valley	New
12	12/2/2010	600	VOIP Phone	Customer Service	Phoenix	Existing
13	12/2/2010	50000	Internet	Customer Service	East Valley	Existing
14	12/2/2010	3000	TV	Direct Sales	East Valley	Existing
15	12/2/2010	16000	Internet	Customer Service	Phoenix	New
16	12/2/2010	18179	Internet	Customer Service	West Valley	Existing
17	12/2/2010	14000	Internet	Direct Sales	East Valley	Existing
18	12/2/2010	8000	VOIP Phone	Direct Sales	Phoenix	Existing
19	12/2/2010	12000	Internet	Customer Service	East Valley	Existing
20	12/2/2010	500	TV	Customer Service	West Valley	Existing
21	12/2/2010	2748	TV	Customer Service	Phoenix	New
22	12/2/2010	75000	Internet	Customer Service	East Valley	New
23	12/2/2010	13903	Internet	Customer Service	Phoenix	Existing
24	12/2/2010	100	TV	Customer Service	Phoenix	Existing

Two red circles with numbers indicate steps: circle 1 points to the first row of data (row 1), and circle 2 points to the cell containing the value "400" in row 2, column B.

- ➊ Set up a range in a worksheet that contains similar information for each row.
- ➋ Click anywhere in the range.

The screenshot shows the Microsoft Excel ribbon with the "Insert" tab selected (indicated by a red circle with the number 3). Below the ribbon, the "Tables" icon is highlighted with a red circle and the number 4. The main area of the screen displays a data table with columns labeled "Date", "Amount", "AcctType", "Opened By", "Branch", and "Customer". The table contains 25 rows of data, such as "12/2/2010 17000 Internet Direct Sales Phoenix Existing".

3 Click the **Insert** tab.

4 Click **Table**.

The Create Table dialog box appears, displaying a suggested range for the table.

A You can deselect this option (changes to) if labels for each column do *not* appear in Row 1.

B You can click to select a new range for the table boundaries by dragging in the worksheet.

5 Click **OK**.

Excel creates a table and applies a table style to it.

The screenshot shows a Microsoft Excel window with a table named "Table1" containing 25 rows of data. The columns are labeled "Date", "Amount", "AccType", "OpenedBy", "Branch", and "Customer". The "Customer" column has a dropdown arrow at its header. The "Table Tools" ribbon is visible, with the "DESIGN" tab selected. The "Table Style Options" group is open, showing checkboxes for "Header Row", "Total Row", "Banded Rows", and "Table Style Options".

Date	Amount	AccType	OpenedBy	Branch	Customer
12/2/2010	17,000	Internet	Direct Sales	Phoenix	Existing
12/2/2010	400	TV	Customer Service	Phoenix	Existing
12/2/2010	3,175	TV	Customer Service	West Valley	Existing
12/2/2010	4,000	VOIP Phone	Customer Service	Phoenix	Existing
12/2/2010	2,000	IRA	Customer Service	West Valley	Existing
12/2/2010	14,548	Internet	Customer Service	Phoenix	Existing
12/2/2010	240	TV	Customer Service	Phoenix	Existing
12/2/2010	6,307	VOIP Phone	Direct Sales	East Valley	Existing
12/2/2010	11,000	Internet	Customer Service	Phoenix	New

C The Table Tools Design tab appears on the Ribbon.

D ▾ appears in each column title.

E Excel assigns the table a generic name.

TIP

When should I use a table?

If you need to identify common information, such as the largest value in a range, or you need to select records that match a criterion, use a table. Tables make ranges easy to navigate. When you press **Tab** with the cell pointer in a table, the cell pointer stays in the table, moving directly to the next cell and to the next table row when you tab from the last column. When you scroll down a table so that the header row disappears, Excel replaces the column letters with the labels that appear in the header row.

Filter or Sort Table Information

When you create a table, Excel automatically adds AutoFilter arrows to each column; you can use these arrows to quickly and easily filter and sort the information in the table.

When you filter a table, you display only those rows that meet conditions you specify, and you specify those conditions by making selections from the AutoFilter lists. You can also use the AutoFilter arrows to sort information in a variety of ways. Excel recognizes the type of data stored in table columns and offers you sorting choices that are appropriate for the type of data.

Filter or Sort Table Information

Filter a Table

- 1 Click ▾ next to the column heading you want to use for filtering.
- A Excel displays a list of possible filters for the selected column.

- 2** Select a filter choice (changes to or changes to).
- 3** Repeat Step **2** until you have selected all of the filters you want to use.
- 4** Click **OK**.

Date	Amount	AcctType	OpenedBy	Branch	Status
12/2/2010	17,000	Internet	Direct Sales	Phoenix	Existing
12/2/2010	400	TV	Customer Service	Phoenix	Existing
12/2/2010	4,000	VOIP Phone	Customer Service	Phoenix	Existing
12/2/2010	14,548	Internet	Customer Service	Phoenix	Existing
12/2/2010	240	TV	Customer Service	Phoenix	Existing
12/2/2010	11,000	Internet	Customer Service	Phoenix	New
12/2/2010	35,000	Internet	Customer Service	Phoenix	Existing
12/2/2010	600	VOIP Phone	Customer Service	Phoenix	Existing
12/2/2010	16,000	Internet	Customer Service	Phoenix	New

12/2/2010	5,000	VOIP Phone	Customer Service	Phoenix	New
12/3/2010	340	TV	Customer Service	Phoenix	Existing
12/3/2010	90,000	Internet	Customer Service	Phoenix	Existing
12/3/2010	124	TV	Direct Sales	Phoenix	Existing

B Excel displays only the data meeting the criteria you selected in Step **2**.

C The AutoFilter changes to to indicate the data in the column is filtered.

Sort a Table

The screenshot shows the Microsoft Excel ribbon with the 'HOME' tab selected. In the 'Cells' group, the 'Sort & Filter' button is highlighted with a purple circle labeled 'D'. A dropdown menu is open, showing options like 'Sort Smallest to Largest' (labeled '1') and 'Sort Largest to Smallest' (labeled '2'). Other options include 'Sort by Color', 'Clear Filter from "Amount"', 'Filter by Color', and 'Number Filters'. The main worksheet area shows a table with columns: Date, Amount, Accts, OpenedBy, Branch, and Customer. The 'Amount' column is currently sorted from smallest to largest.

1 Click ▾ next to the column heading you want to use for sorting.

D Excel displays a list of possible sort orders.

2 Click a sort order.

This example sorts from smallest to largest.

The screenshot shows the Microsoft Excel ribbon with the 'HOME' tab selected. In the 'Cells' group, the 'Sort & Filter' button is highlighted with a purple circle labeled 'F'. A dropdown menu is open, showing options like 'Sort Smallest to Largest' (labeled 'E') and 'Sort Largest to Smallest'. The main worksheet area shows a table with columns: Date, Amount, Accts, OpenedBy, Branch, and Customer. The 'Amount' column is currently sorted from smallest to largest.

E Excel reorders the information.

F ▾ changes to ▷ to indicate the data in the column is sorted.

TIPS

How does the Sort by Color option work?

If you apply font colors, cell colors, or both to some cells in the table, you can then sort the table information by the colors you assigned. You can manually assign colors or you can assign colors using Conditional Formatting; see Chapter 9 for details on using Conditional Formatting.

I do not see the AutoFilter down arrow beside my table headings. What should I do?

Click the **Data** tab and then click the **Filter** button. This button toggles on and off the appearance of the AutoFilter ▾ in a table.

Analyze Data Quickly

You can easily analyze data in a variety of ways using the Quick Analysis button. You can apply various types of conditional formatting, create different types of charts, or add miniature graphs called sparklines (see Chapter 12 for details on sparkline charts). You can also sum, average, and count occurrences of data as well as calculate percent of total and running total values. In addition, you can apply a table style and create a variety of different PivotTables.

The choices displayed in each analysis category are not always the same; the ones you see depend on the type of data you select.

Analyze Data Quickly

A screenshot of Microsoft Excel showing a data table in the background. The table has columns for Company, Industry, Q1 Sales, and Q2 Sales. A range of cells from A1 to D16 is selected. In the top right corner of the selection, there is a small blue square button with a white icon, which is the Quick Analysis button. Two numbered callouts point to this button: callout 1 points to the top right corner of the selection, and callout 2 points directly at the button itself. The Excel ribbon is visible at the top, and the status bar at the bottom shows 'AVERAGE: 540124.9667' and 'COUNT: 64'.

	Company	Industry	Q1 Sales	Q2 Sales
1	A. Datum Corporation	Tech	\$ 195,449	\$ 746,907
2	Adventure Works	Travel	\$ 123,721	\$ 733,396
3	Blue Yonder Airlines	Travel	\$ 934,763	\$ 246,594
4	City Power & Light	Utilities	\$ 299,293	\$ 674,295
5	Coho Vineyard	Beverage	\$ 228,783	\$ 659,385
6	Contoso, Ltd.	Misc	\$ 239,219	\$ 287,969
7	Contoso Pharmaceuticals	Medical	\$ 371,570	\$ 644,368
8	Consolidated Messenger	Tech	\$ 579,825	\$ 448,399
9	Fabrikam, Inc.	Utilities	\$ 639,630	\$ 625,474
10	Fourth Coffee	Beverage	\$ 876,740	\$ 567,216
11	Graphic Design Institute	Education	\$ 788,390	\$ 540,292
12	Humongous Insurance	Financial	\$ 682,545	\$ 577,599
13	Ubwire, Inc.	Tech	\$ 902,264	\$ 206,331
14	Lucerne Publishing	Misc	\$ 925,906	\$ 443,552
15	Marge's Travel	Travel	\$ 289,570	\$ 43,834

① Select a range of data to analyze.

A The Quick Analysis button (➊) appears.

② Click ➋.

Quick Analysis categories appear.

③ Click each category heading to view the options for that category.

④ Point the mouse at a choice under a category.

B A preview of that analysis choice appears.

Note: For an explanation of the Quick Analysis choices, see the next section, “Understanding Data Analysis Choices.”

⑤ When you find the analysis choice you want to use, click it and Excel creates it.

Understanding Data Analysis Choices

The Quick Analysis button offers a variety of ways to analyze selected data. This section provides an overview of the analysis categories and the choices offered in each category.

Formatting

The screenshot shows the Quick Analysis ribbon with the 'FORMATTING' tab selected. Below the tabs are six icons: Data Bars, Color Scale, Icon Set, Greater Than, Text Contains, and Clear Format. A note at the bottom states: 'Conditional Formatting uses rules to highlight interesting data.'

Icon	Name
Data Bars	Data Bars
Color Scale	Color Scale
Icon Set	Icon Set
Greater Than	Greater Than
Text Contains	Text Contains
Clear Format	Clear Format

Conditional Formatting uses rules to highlight interesting data.

Use formatting to highlight parts of your data. With formatting, you can add data bars, color scales, and icon sets. You can also highlight values that exceed a specified number and cells that contain specified text.

Charts

The screenshot shows the Quick Analysis ribbon with the 'CHARTS' tab selected. Below the tabs are six chart types: Clustered Column, Clustered Column, Clustered Bar, Clustered Column, Scatter, and More Charts. A note at the bottom states: 'Recommended Charts help you visualize data.'

Icon	Name
Clustered Column	Clustered Column
Clustered Column	Clustered Column
Clustered Bar	Clustered Bar
Clustered Column	Clustered Column
Scatter	Scatter
More Charts	More Charts

Recommended Charts help you visualize data.

Pictures often get your point across better than raw numbers. You can quickly chart your data; Excel recommends different chart types, based on the data you select. If you do not see the chart type you want

to create, you can click More Charts.

Totals

FORMATTING CHARTS TOTALS TABLES SPARKLINES

Sum Average Count % Total Running Total Sum

Formulas automatically calculate totals for you.

Using the options in the Totals category, you can easily calculate sums — of both rows and columns — as well as averages, percent of total, and the number of occurrences of the values in the range. You can also insert a running total that grows as you add items to your data.

Tables

FORMATTING CHARTS TOTALS TABLES SPARKLINES

Table PivotTa... PivotTa... PivotTa... More

Tables help you sort, filter, and summarize data.

Using the choices under the Tables category, you can convert a range to a table, making it easy to filter and sort your data. You can also quickly and easily create a variety of PivotTables — Excel suggests PivotTables you might want to consider and then creates any you might choose.

Sparklines

[FORMATTING](#)[CHARTS](#)[TOTALS](#)[TABLES](#)[SPARKLINES](#)

Line

Column

Win/
Loss

Sparklines are mini charts placed in single cells.

Sparklines are tiny charts that you can display beside your data that provide trend information for selected data. See Chapter 12 for more information on sparkline charts.

Track and Review Worksheet Changes

If you share your Excel workbooks with others, you can use the program's Track Changes feature to help you keep track of the edits others have made, including formatting changes and data additions or deletions. When you enable tracking, Excel automatically shares the workbook. As you set up tracking options, you can identify the changes you want Excel to highlight. When tracking changes, Excel adds comments that summarize the type of change made. Excel also displays a dark-blue box around a cell that has been changed, and a small blue triangle appears in the upper-left corner of the changed cell.

Track and Review Worksheet Changes

Turn On Tracking

- ① Click the **Review** tab.
- ② Click **Track Changes**.

③ Click **Highlight Changes**.

The Highlight Changes dialog box appears.

④ Select **Track changes while editing** (changes to).

Excel automatically shares the workbook file if you have not previously shared it.

A You can select options to determine when, by whom, or where Excel tracks changes.

B You can leave this option selected to display changes on-screen.

⑤ Click **OK**.

Excel prompts you to save the workbook.

6 Type a filename.

7 Click Save.

Excel shares the workbook and begins tracking changes to it.

The screenshot shows an Excel spreadsheet named 'Track Changes.xlsx (Shared)'. The spreadsheet contains a table of media requirements and an investments section. A comment is visible in the investments section, and a tracked change is shown for cell B11.

	Media Requirements			
	TV	Radio	Mail	Newspaper
Audience Size	75,000	40,000	30,000	35,000
Cost / Impression	\$300	\$200	\$150	\$100
Max Impressions	10	15	5	20

	Investments			
Amount	TV	Elaine Marmel, 12/7/2012 11:15 AM Changed cell B11 from '\$500.00' to '\$600.00'.		
Impressions	150,000			
Audience				

8 Edit your worksheet.

- C** Excel places a dark-blue box around changed cells, and a small blue triangle appears in the upper-left corner of the changed cell.
- D** To view details about a change, position the mouse pointer over the highlighted cell.

TIP

What does the Share Workbook feature do?

The Share Workbook feature enables multiple users to work in a workbook at the same time. To open this dialog box, click the **Share Workbook** button on the Ribbon. You use the Advanced tab of the Share Workbook dialog box to change various Share Workbook settings, such as when files are updated to reflect one user's changes and what should happen when changes made by two or more users conflict. You can also use this dialog box to remove a user from the shared workbook; click the **Editing** tab to find this option.

Reviewing edits made to a workbook is simple. When you review a workbook in which Excel tracked changes, you can specify whose edits you want to review and what types of edits you want to see. Excel automatically locates and highlights the first edit in a worksheet and gives you the option to accept or reject the edit. After you make your selection, Excel automatically locates and selects the next edit, and so on. You can accept or reject edits one at a time or accept or reject all edits in the worksheet at once.

When you finish reviewing, you can turn off tracking.

Track and Review Worksheet Changes

Review Changes

A screenshot of Microsoft Excel showing the 'Review' tab selected in the ribbon. The 'Comments' group is open, highlighting the 'Track Changes' button (step 2) and the 'Accept/Reject Changes' button (step 3). The main worksheet displays a table titled 'Media Requirements' and another table titled 'Investments'.

	TV	Radio	Mail	Newspaper
Audience Size	75,000	40,000	30,000	35,000
Cost / Impression	\$300	\$200	\$150	\$100
Max Impressions	10	15	5	20

	TV	Radio	Mail	Newspaper	Total
Amount	\$0	\$0	\$0	\$0	\$0
Impressions	0	0	0	0	0
Audience	0	0	0	0	0

- 1 Click the **Review** tab.
- 2 Click **Track Changes**.
- 3 Click **Accept/Reject Changes**.

Excel prompts you to save the file.

- 4 Click **OK**.

The Select Changes to Accept or Reject dialog box appears.

- 5 Click options for which changes you want to view.

6 Click OK.

The Accept or Reject Changes dialog box appears.

7 Specify an action for each edit:

A You can click **Accept** to add the change to the final worksheet.

B You can click **Reject** to reject the change.

C You can click one of these options to accept or reject all of the changes at the same time.

TIP

How can I stop tracking changes?

To turn off Track Changes, follow these steps:

1 Click the **Review** tab.

2 Click the **Track Changes** button.

③ Click Highlight Changes.

- ④ In the Highlight Changes dialog box that appears, deselect **Track changes while editing** (changes to).
- ⑤ Click **OK**. A message appears, explaining the consequences of no longer sharing the workbook; click **OK**.

Insert a Comment

You can add comments to your worksheets. You might add a comment to make a note to yourself about a particular cell's contents, or you might include a comment as a note for other users to see. For example, if you share your workbooks with other users, you can use comments to leave feedback about the data without typing directly in the worksheet.

When you add a comment to a cell, Excel displays a small red triangle in the upper-right corner of the cell until you choose to view it. Comments you add are identified with your username.

Insert a Comment

Add a Comment

- ① Click the cell to which you want to add a comment.
- ② Click the **Review** tab on the Ribbon.
- ③ Click the **New Comment** button.

You can also right-click the cell and choose **Insert Comment**.
A comment balloon appears.

The screenshot shows a Microsoft Excel spreadsheet titled "comment.xlsx - Excel". The ribbon is visible at the top with tabs like FILE, HOME, INSERT, PAGE LAYOUT, FORMULAS, DATA, REVIEW, and VIEW. The REVIEW tab is selected. In the center of the screen, cell E5 contains the value "75,000". A red circle labeled "4" highlights a small green comment icon to the right of the cell. A comment balloon has appeared, containing the text: "Elaine Marmel You can change this value to change the outcome of the evaluation." The background shows other parts of the spreadsheet, including a "Media Requirements" section and an "Investments" section.

- ④ Type your comment text.

The screenshot shows the same Microsoft Excel spreadsheet as the previous one. The comment balloon in cell E5 now contains the text "A". A purple circle labeled "A" is placed over the letter "A" in the comment text. A red circle labeled "5" points to the cell E5 where the comment is located. The rest of the spreadsheet remains the same, with the "Media Requirements" and "Investments" sections visible.

- ⑤ Click anywhere outside the comment balloon to deselect the

comment.

A Cells that contain comments display a tiny red triangle in the corner.

View a Comment

The screenshot shows a Microsoft Excel spreadsheet titled "comment.xlsx - Excel". The ribbon is visible with the Review tab selected. In the Comments area of the ribbon, the "Show All Comments" button is highlighted. The spreadsheet contains two tables: "Media Requirements" and "Investments". In the "Media Requirements" table, cell E5 contains a comment: "You can change this value to change the outcome of the evaluation." A red arrow labeled "1" points to the top-left corner of this cell, indicating it contains a comment. A blue arrow labeled "B" points to the comment itself. The "Investments" table is below it. The status bar at the bottom left shows "Cell E5 commented by Elaine Marmel".

1 Position the mouse pointer over the cell.

B The comment balloon appears, displaying the comment.

TIPS

How do I view all the comments in a worksheet?

If a worksheet contains several comments, you can view them one after another by clicking the **Next** button in the Review tab's Comments area. To view a comment you have already seen, click the **Previous** button. Alternatively, display all comments at once by clicking the **Show All Comments** button.

How do I remove a comment?

To remove a comment, right-click the cell containing the comment and choose **Delete Comment** from the shortcut menu that appears. Alternatively, click the cell containing the comment and click the **Delete** button in the Review tab's Comments group.

Chapter 11: Working with Formulas and Functions

Understanding Formulas

You can use formulas, which you build using mathematical operators, values, and cell references, to perform all kinds of calculations on your Excel data. For example, you can add the contents of a column of monthly sales totals to determine the cumulative sales total.

If you are new to writing formulas, this section explains the basics of building your own formulas in Excel. You learn about the correct way to structure formulas in Excel, how to reference cell data in your formulas, which mathematical operators are available for your use, and more.

Formula Structure

Ordinarily, when you write a mathematical formula, you write the values and the operators, followed by an equal sign, such as $2+2=$. In Excel, formula structure works a bit differently. All Excel formulas begin with an equal sign (=), such as =2+2. The equal sign tells Excel to recognize any subsequent data as a formula rather than as a regular cell entry.

Reference a Cell

Every cell in a worksheet has a unique address, composed of the cell's column letter and row number, and that address appears in the Name box to the left of the Formula bar. Cell B3, for example, identifies the third cell down in column B. Although you can enter specific values in your Excel formulas, you can make your formulas more versatile if you include — that is, *reference* — a cell address instead of the value in that cell. Then, if the data in the cell changes but the formula remains the same, Excel automatically updates the result of the formula.

Cell Ranges

A group of related cells in a worksheet is called a *range*. Excel identifies a range by the cells in the upper-left and lower-right corners of the range, separated by a colon. For example, range A1:B3 includes cells A1, A2, A3, B1, B2, and B3. You can also assign names to ranges to make it easier to identify their contents. Range names must start with a letter, underscore, or backslash, and can include uppercase and lowercase letters. Spaces are not allowed.

Mathematical Operators

You use mathematical operators in Excel to build formulas. Basic operators include the following:

Operator	Operation
+	Addition
-	Subtraction
*	Multiplication
/	Division
%	Percentage
^	Exponentiation
=	Equal to
<	Less than
<=	Less than or equal to
>	Greater than
>=	Greater than or equal to
<>	Not equal to

Operator Precedence

Excel performs operations from left to right, but gives some operators precedence over others, following the rules you learned in high school math:

Order	Operation
First	All operations enclosed in parentheses
Second	Exponential operations
Third	Multiplication and division
Fourth	Addition and subtraction

When you are creating equations, the order of operations determines the results. For example, suppose you want to determine the average of values in cells A2, B2, and C2. If you enter the equation `=A2+B2+C2/3`, Excel first divides the value in cell C2 by 3, and then adds that result to A2+B2 — producing the wrong answer. The correct way to write the formula is `=(A2+B2+C2)/3`. By enclosing the values in parentheses, you are telling Excel to perform the addition operations in the parentheses before dividing the sum by 3.

Reference Operators

You can use Excel's reference operators to control how a formula groups cells and ranges to perform calculations. For example, if your formula needs to include the cell range D2:D10 and cell E10, you can instruct Excel to evaluate all the data contained in these cells using a reference operator. Your formula might look like this: `=SUM(D2:D10,E10)`.

Operator	Example	Operation
:	<code>=SUM(D3:E12)</code>	Range operator. Evaluates the reference as a single reference, including all of the cells in the range from both corners of the reference.
,	<code>=SUM(D3:E12,F3)</code>	Union operator. Evaluates the two references as a single reference.
[space]	<code>=SUM(D3:D20 D10:E15)</code>	Intersect operator. Evaluates the cells common to both references.
[space]	<code>=SUM(Totals Sales)</code>	Intersect operator. Evaluates the intersecting cell or cells of the column labeled Totals and the row labeled Sales.

Create a Formula

You can write a formula to perform a calculation on data in your worksheet. In Excel, all formulas begin with an equal sign (=) and contain the values or cell references to the cells that contain the relevant values. For example, the formula for adding the contents of cells C3 and C4 together is =C3+C4. You create formulas in the Formula bar; formula results appear in the cell to which you assign a formula.

Note that, in addition to referring to cells in the current worksheet, you can also build formulas that refer to cells in other worksheets.

Create a Formula

1 Click the cell where you want to place a formula.

2 Type =.

A Excel displays the formula in the Formula bar and in the active cell.

Company	Industry	Q1 Sales	Q2 Sales	Total Sales

Marge's Travel	Travel	\$ 289,570	\$ 843,834	

F The result of the formula appears in the cell.

G The formula appears in the Formula bar; you can view it by clicking the cell containing the formula.

Note: If you change a value in a cell referenced in your formula, Excel automatically updates the formula result to reflect the change.

How do I edit a formula?

To edit a formula, click in the cell containing the formula and make any corrections in the Formula bar. Alternatively, double-click in the cell to make edits to the formula from within the cell. When finished, press **Enter** or click **Enter** (✓) on the Formula bar.

How do I reference cells in other worksheets?

To reference a cell in another worksheet, specify the worksheet name followed by an exclamation mark and then the cell address (for example, Sheet2!D12 or Sales!D12). If the worksheet name includes spaces, enclose the sheet name in single quote marks, as in ‘Sales Totals’!D12.

Apply Absolute and Relative Cell References

By default, Excel uses relative cell referencing. If you copy a formula containing a relative cell reference to a new location, Excel adjusts the cell addresses in that formula to refer to the cells at the formula's new location. For example, if you enter, in cell B8, the formula =B5+B6 and then you copy that formula to cell C8, Excel adjusts the formula to =C5+C6.

When a formula must always refer to the value in a particular cell, use an absolute cell reference. Absolute references are preceded with dollar signs. If your formula must always refer to the value in cell D2, enter \$D\$2 in the formula.

Apply Absolute and Relative Cell References

Copy Relative References

- 1 Enter the formula.

absolute and relative.xlsx - Excel

5 Select the cells where you want the formula to appear.

6 Click **Paste**.

B Excel copies the formula to the selected cells.

C The adjusted formula appears in the Formula bar and in the selected cells.

Copy Absolute References

1 Enter the formula, including dollar signs (\$) for absolute addresses as needed.

The screenshot shows a Microsoft Excel spreadsheet titled "absolute and relative.xlsx". The "Home" tab is selected. In the formula bar, the formula \$E\$4/\$E\$7 is displayed. A red circle labeled "D" points to the formula bar. A red circle labeled "2" points to the cell E5, which contains the formula \$E\$4/\$E\$7 and is highlighted with a green border. A red circle labeled "3" points to the "Copy" button in the ribbon's clipboard group. A red circle labeled "4" points to the "Paste" button in the ribbon's clipboard group.

	January	February	March	Total Sales	% of Sales
Widgets	127	135	145	\$ 407	26%
Gadgets	149	163	179	\$ 491	
Sedgets	165	189	203	\$ 557	
				\$ 1,455	

2 Click the cell containing the formula you want to copy.

D In the Formula bar, the formula appears with an absolute cell reference.

3 Click the **Home** tab.

4 Click **Copy** (C).

5 Select the cells where you want the formula to appear.

6 Click Paste.

E Excel copies the formula to the selected cells.

F The formula in the selected cells adjusts only relative cell references; absolute cell references remain unchanged.

TIP

When would I use absolute cell referencing?

Use absolute cell referencing to always refer to the same cell in a worksheet. For example, suppose your worksheet contains pricing information that refers to a discount rate in cell G10. When you create a formula that involves the discount rate, that formula must always reference cell G10, even if you move or copy the formula to another cell. In this case, use \$G\$10. You can also combine absolute and relative references, creating *mixed references* that allow either the row

or column to change while the other remains static if you copy the formula.

Understanding Functions

If you are looking for a speedier way to enter formulas, you can use any one of a wide variety of functions. Functions are ready-made formulas that perform a series of operations on a specified range of values. Excel offers more than 300 functions, grouped into 13 categories, that you can use to perform various types of calculations. Functions use arguments to identify the cells that contain the data you want to use in your calculations. Functions can refer to individual cells or to ranges of cells.

Function Elements

All functions must start with an equal sign (=). Functions are distinct in that each one has a name. For example, the function that sums data is called SUM, and the function for averaging values is called AVERAGE. You can create functions by typing them directly into your worksheet cells or the Formula bar; alternatively, you can use the Insert Function dialog box to select and apply functions to your data.

Construct an Argument

Functions use arguments to indicate which cells contain the values you want to calculate. Arguments are enclosed in parentheses. When applying a function to individual cells in a worksheet, you can use a comma to separate the cell addresses, as in =SUM(A5,C5,F5). When applying a function to a range of cells, you can use a colon to designate the first and last cells in the range, as in =SUM(B4:G4). If your range has a name, you can insert the name, as in =SUM(Sales).

Types of Functions

Excel groups functions into 13 categories, not including functions installed with Excel add-in programs:

Category	Description
Financial	Includes functions for calculating loans, principal, interest, yield, and depreciation.
Date & Time	Includes functions for calculating dates, times, and minutes.
Math & Trig	Includes a wide variety of functions for calculations of all types.
Statistical	Includes functions for calculating averages, probabilities, rankings, trends, and more.
Lookup & Reference	Includes functions that enable you to locate references or specific values in your worksheets.
Database	Includes functions for counting, adding, and filtering database items.
Text	Includes text-based functions to search and replace data and other text tasks.
Logical	Includes functions for logical conjectures, such as if-then statements.
Information	Includes functions for testing your data.
Engineering	Offers many kinds of functions for engineering calculations.
Cube	Enables Excel to fetch data from SQL Server Analysis Services, such as members, sets, aggregated values, properties, and KPIs.
Compatibility	Use these functions to keep your workbook compatible with earlier versions of Excel.
Web	Use these functions when you work with web pages, services, or XML content.

Common Functions

The following table lists some of the more popular Excel functions that you might use with your own spreadsheet work.

Function	Category	Description	Syntax
SUM	Math & Trig	Adds values	=SUM(number1,number2,...)
ROUND	Math & Trig	Rounds a number to a specified number of digits	=ROUND(number,number_digits)
ROUNDDOWN	Math & Trig	Rounds a number down	=ROUNDDOWN(number,number_digits)
INT	Math & Trig	Rounds down to the nearest integer	=INT(number)
COUNT	Statistical	Counts the number of cells in a range that contain data	=COUNT(value1,value2,...)
AVERAGE	Statistical	Averages a series of arguments	=AVERAGE(number1,number2,...)
MIN	Statistical	Returns the smallest value in a series	=MIN(number1,number2,...)
MAX	Statistical	Returns the largest value in a series	=MAX(number1,number2,...)
MEDIAN	Statistical	Returns the middle value in a series	=MEDIAN(number1,number2,...)
PMT	Financial	Finds the periodic payment for a fixed loan	=PMT(interest_rate,number_of_periods,present_value,future_value,type)
RATE	Financial	Returns an interest rate	=RATE(number_of_periods,payment,present_value,future_value,type,guess)
TODAY	Date & Time	Returns the current date	=TODAY()
IF	Logical	Returns one of two results that you specify based on whether the value is true or false	=IF(logical_text,value_if_true,value_if_false)
AND	Logical	Returns true if all of the arguments are true, and false if any argument is false	=AND(logical1,logical2,...)
OR	Logical	Returns true if any argument is true, and false if all arguments are false	=OR(logical1,logical2,...)

Apply a Function

You can use functions to speed up your Excel calculations. *Functions* are ready-made formulas that perform a series of operations on a specified range of values.

You use the Insert Function dialog box, which acts like a wizard, to look for a particular function from among Excel's 300-plus available functions and to guide you through successfully entering the function. After you select your function, the Function Arguments dialog box opens to help you build the formula by describing the arguments you need for the function you chose. Functions use arguments to indicate that the cells contain the data you want to use in your calculation.

Apply a Function

- ① Click the cell in which you want to store the function.
- ② Click the **Formulas** tab.
- ③ Click the **Insert Function** button.

A Excel inserts an equal sign to indicate that a formula follows.

Excel displays the Insert Function dialog box.

④ Type a description of the function you need here.

⑤ Click Go.

B A list of suggested functions appears.

⑥ Click the function that you want to apply.

C A description of the selected function appears here.

⑦ Click OK.

The Function Arguments dialog box appears.

8 Select the cells for each argument required by the function.

In the worksheet, Excel adds the cells as the argument to the function.

D Additional information about the function appears here.

9 When you finish constructing the arguments, click OK.

The screenshot shows an Excel spreadsheet titled 'functions.xlsx - Excel'. The formula bar displays '=SUM(B4:D4)'. The spreadsheet contains a table with data for 'Widgets', 'Gadgets', and 'Sedgers' across three months: January, February, and March. The total sales for each item are calculated in column D. Cell D4, which contains the value '407', is highlighted with a red circle and labeled 'E'. The formula '=SUM(B4:D4)' is also highlighted in the formula bar with a red circle and labeled 'F'.

	January	February	March	Total Sales
Widgets	127	135	145	\$ 407
Gadgets	149	163	179	
Sedgers	165	189	203	

E Excel displays the function results in the cell.

F The function appears in the Formula bar.

TIPS

Can I edit a function?

Yes. Click the cell containing the function, click the **Formulas** tab, and then click the **Insert Function** button. Excel displays the function's Function Arguments dialog box, where you can change the cell references or values as needed. You can also edit directly in the cell.

How can I find help with a particular function?

Click the **Help on this function** link in either the Insert Function or Function Arguments dialog box to find out more about the function. The function help includes an example of the function being used and tips about using the function.

Total Cells with AutoSum

One of the most popular Excel functions is the AutoSum function. AutoSum automatically totals the contents of cells. For example, you can quickly total a column of sales figures. One way to use AutoSum is to select a cell and let the function guess which surrounding cells you want to total. Alternatively, you can specify exactly which cells to sum.

In addition to using AutoSum to total cells, you can simply select a series of cells in your worksheet; Excel displays the total of the cells' contents in the status bar, along with the number of cells you selected and an average of their values.

Total Cells with AutoSum

Using AutoSum to Total Cells

- 1 Click the cell in which you want to store a total.
- 2 Click the **Formulas** tab.

3 Click the AutoSum button.

A If you click the AutoSum ▾, you can select other common functions, such as Average or Max.

You can also click the AutoSum button (Σ) on the Home tab.

The screenshot shows a Microsoft Excel spreadsheet titled "Formulas.xlsx - Excel". The ribbon at the top has the "FORMULAS" tab selected. On the far left of the ribbon, there is a dropdown menu with a red circle and the number 4 over it, labeled "AutoSum". Below the ribbon is a "Function Library" group containing "SUM", "AVERAGE", "MAX", and "MIN". The main area of the screen displays a table with columns for Company, Industry, Q1 Sales, and Q2 Sales. The range C2:C6 is selected. The formula bar at the bottom shows the formula =SUM(C2:C6). A purple callout with the letter B points from the text "AutoSum generates a formula to total the adjacent cells." to the formula in the formula bar.

	A	B	C	D	E	F	G	H	I	J	K	L	M

			\$ 8,057,649

G F E

① Click a group of cells whose values you want to total.

Note: To sum noncontiguous cells, press and hold **Ctrl** while clicking the cells.

E Excel adds the contents of the cells, displaying the sum in the status bar along the bottom of the program window.

F Excel also counts the number of cells you have selected.

G Excel also displays an average of the values in the selected cells.

TIPS

Can I select a different range of cells to sum?

Yes. AutoSum takes its best guess when determining which cells to total. If it guesses wrong, simply click the cells you want to add together before pressing **Enter** or clicking **Enter** (✓).

Why do I see pound signs (#) in a cell that contains a SUM function?

Excel displays pound signs in any cell — not just cells containing formulas or functions — when the cell's column is not wide enough to display the contents of the cell, including the cell's formatting. Widen the column to correct the problem; see Chapter 9 for details.

Audit a Worksheet for Errors

On occasion, you may see an error message, such as #DIV/0! or #NAME?, in your Excel worksheet. If you do, you should double-check your formula references to ensure that you included the correct cells. Locating the source of an error can be difficult, however, especially in larger worksheets. Fortunately, if an error occurs in your worksheet, you can use Excel's Formula Auditing tools — namely, Error Checking and Trace Error — to examine and correct formula errors. For more information on types of errors and how to resolve them, see the table in the tip.

Audit a Worksheet for Errors

Apply Error Checking

① Click the **Formulas** tab.

② Click the **Error Checking** button (🔍).

A Excel displays the Error Checking dialog box and highlights the first

cell containing an error.

- ③ To fix the error, click **Edit in Formula Bar**.
 - B To find help with an error, you can click here to open the help files.
 - C To ignore the error, you can click **Ignore Error**.
 - D You can click **Previous** and **Next** to scroll through all of the errors on the worksheet.
- ④ Make edits to the cell references in the Formula bar or in the worksheet.

- ⑤ Click **Resume**.

When the error check is complete, a message box appears.

- ⑥ Click **OK**.

Trace Errors

- 1 Click the cell containing the formula or function error that you want to trace.
- 2 Click the **Formulas** tab.
- 3 Click the **Error Checking**
- 4 Click **Trace Error**.

- E Excel displays trace lines from the current cell to any cells referenced in the formula.

You can make changes to the cell contents or changes to the formula to correct the error.

- F You can click **Remove Arrows** to turn off the trace lines.

TIP**What kinds of error messages does Excel display for formula errors?**

Different types of error values appear in cells when an error occurs:

Error	Problem	Solution
#####	The cell is not wide enough to contain the value	Increase the column width
#DIV/0!	Dividing by zero	Edit the cell reference or value of the denominator
#N/A	Value is not available	Ensure that the formula references the correct value
#NAME?	Does not recognize text in a formula	Ensure that the name referenced is correct
#NULL!	Specifies two areas that do not intersect	Check for an incorrect range operator or correct the intersection problem
#NUM!	Invalid numeric value	Check the function for an unacceptable argument
#REF!	Invalid cell reference	Correct cell references
#VALUE!	Wrong type of argument or operand	Double-check arguments and operands

Add a Watch Window

Suppose you have a formula at the bottom of your worksheet that references cells at the top of your worksheet. Further suppose that you want to see the effects on the formula as you change cells to which the formula refers. You can create a watch window to display the cell containing the formula, no matter where you scroll. You can also use a watch window to view cells in other worksheets or in a linked workbook. You can position your watch window anywhere on-screen or dock the window to appear with the toolbars at the top of the program window.

Add a Watch Window

- 1 Click the **Formulas** tab on the Ribbon.
- 2 Click **Watch Window**.

The Watch Window opens.

Watch Window

3

Add Watch... Delete Watch

Book	Sheet	Name	Cell	Value	Formula

3 Click Add Watch.

The Add Watch dialog box appears.

The screenshot shows a Microsoft Excel spreadsheet titled "watchwindow.xlsx". The spreadsheet contains a table of transaction data with columns: Date, Amount, Acct Type, Opened By, Branch, and Customer. A formula, =SUM(B2:B45), is entered in cell B66. A "Watch Window" dialog box is open over the spreadsheet, containing a table with columns: Book, Sheet, Name, Cell, Value, and Formula. The "Add Watch" button is highlighted with a red circle labeled "4". The "Add" button in the dialog box is highlighted with a red circle labeled "5".

Book	Sheet	Name	Cell	Value	Formula

4 Select the cell or range that you want to watch.

5 Click Add.

Note: You can add multiple cells to the watch window.

A Excel adds the cells to the watch window, including any values or formulas within the cells.

B If you scroll away from the cells included in the watch window, the watch window continues to display their contents. You can make changes and the watch window displays the updated value. In this example, Rows 4 and 7 changed, and so did the value in the watch window.

Note: To select the original cell, you can double-click anywhere on the line in the watch window.

6 Click the **Close** button (x) to close the watch window.

TIPS

How do I remove and add cells in the watch window?

To remove a cell from the watch window, click anywhere on the line for the cell in the watch window and then click the **Delete Watch** button. To add more cells, click the **Add Watch** button and select the cell that

you want to add.

How can I move and resize the watch window?

To move the watch window, click and drag the window's title bar. To resize the columns within the watch window, position the mouse pointer over a column (▶ changes to +), and drag to resize the column.

Chapter 12: Working with Charts

Create a Chart

You can quickly convert your spreadsheet data into easy-to-read charts. You can create column, line, pie, bar, area, scatter, stock, surface, doughnut, bubble, and radar charts. Excel even recommends the type of chart that works best for your data. If you do not like Excel's recommendations, you can select the chart of your choice.

You can create charts using the Ribbon or using the Quick Analysis button. After you create a chart, you can use buttons beside the chart or on the Chart Tools tabs to fine-tune the chart to best display and explain the data.

Create a Chart

Using the Ribbon

- 1 Select the range of data that you want to chart.

You can include any headings and labels, but do not include subtotals or totals.

2 Click the **Insert** tab.

3 Click **Recommended Charts**.

The Insert Chart dialog box appears.

4 Scroll through the recommended charts.

A A preview of your data appears.

B If you do not see the chart you want to use, click **All Charts**.

5 Click a chart type.

6 Click **OK**.

C Excel creates a chart and places it in the worksheet.

D Whenever you select the chart, Chart Tools tabs appear on the Ribbon.

E You can use the **Chart Elements** (⊕), **Chart Styles** (Fmt), and **Chart Filters** (Filter) buttons to add chart elements like axis titles, customize the look of your chart, or change the data in the chart.

Using the Quick Analysis Button

- 1 Select the range of data that you want to chart.

You can include any headings and labels, but do not include subtotals or totals.

- 2 Click the **Quick Analysis** button ().

- 3 From the categories that appear, click **Charts**.

- 4 Slide the mouse over a recommended chart type.

F Excel displays a preview of your data using that chart type.

G If you do not see the chart you want to use, click **More Charts**.

5 Click a chart type to insert it.

Excel inserts the chart type you selected.

TIPS

Can I select noncontiguous data to include in a chart?

Yes. To select noncontiguous cells and ranges, select the first cell or range and then press and hold **Ctrl** while selecting additional cells and ranges.

In my column chart, I want bars for the elements appearing in the legend; is there an easy way to make that happen?

Yes. The legend displays the row headings in your selected data, while the bars represent the column headings. So, switch the rows and

columns in the chart. Click the chart to select it. Then, click the **Chart Tools Design** tab and, in the Data group, click **Switch Row/Column**.

Move and Resize Charts

After creating a chart, you may decide that it would look better if it were a different size or located elsewhere on the worksheet. For example, you may want to reposition the chart at the bottom of the worksheet or make the chart larger so it is easier to read.

Moving or resizing a chart is like moving or resizing any other type of Office object. When you select a chart, handles appear around that chart; you use these handles to make the chart larger or smaller. Moving the chart is a matter of selecting it and then dragging it to the desired location.

Move and Resize Charts

Resize a Chart

① Click any edge of the chart.

A Excel selects the chart and surrounds it with handles; + changes to *

and , , and appear.

- ② Position the mouse pointer over a handle (changes to , , , or).

- ③ Click and drag a handle to resize the chart.

B A frame appears, representing the chart as you resize it on the worksheet.

C , , , or changes to .

- ④ Release the mouse button.

Excel resizes the chart.

Move a Chart

➊ Click any edge of the chart.

➋ Excel selects the chart and surrounds it with handles.

➌ **E** changes to .

➍ **F** , , and appear.

➎ Position the mouse pointer over an empty area of the chart.

3 Click and drag the chart to a new location on the worksheet.

G changes to **+**.

+, **x**, and **T** disappear.

4 Release the mouse button.

Excel moves the chart.

TIP

Can I delete a chart or move it to its own worksheet?

Yes. To delete a chart, right-click its edge and press **Delete**. To move a chart to its own worksheet, right-click its edge and click **Move Chart** to display the Move Chart dialog box. Select **New sheet (A)** (**o** changes to **□**) and click **OK (B)**. Excel adds a new worksheet called Chart1 to the workbook and places the chart in that worksheet.

Change the Chart Type

Suppose you create a column chart but then realize your data would be better presented in a line chart. You can easily change the chart type. Excel recommends chart types that are suitable for your data, but you are not limited to its recommendations.

You select a new chart type using Chart Tools tabs on the Ribbon. To make these tabs available, you select the chart. You click the edge of the chart to select the entire chart or select individual elements of the chart by clicking them. As long as you click anywhere inside the chart, Chart Tools tabs appear on the Ribbon.

Change the Chart Type

① Click an edge of the chart to select it.

A Handles surround the chart.

② Click the **Design** tab.

③ Click Change Chart Type.

The Change Chart Type dialog box appears.

B To view Excel's recommendations for chart types for your data, click here.

4 Click a chart type.

5 Click a chart variation.

C A preview of your chart appears here; point the mouse at the preview to enlarge it.

6 Click OK.

D Excel changes the chart to the chart type that you selected.

Change the Chart Style

You can change the chart style to change the appearance of a chart. You can choose from a wide variety of preset styles to find just the look you want. For example, you might prefer a brighter color scheme for the chart to make it stand out, or you might want the elements of the chart, such as the columns or pie slices, to appear three-dimensional.

You can access various preset chart styles from the Design tab or from the Chart Styles button that appears along the right edge of a selected chart. To select a chart, click along its edge.

Change the Chart Style

① Click an edge of the chart to select it.

A Handles surround the chart.

② Click .

B The Chart Styles pane appears.

3 Click **Style** to view available chart styles.

C You can click and to scroll through available styles.

You can point the mouse at a style to preview it.

4 Click a new style.

Excel applies the new style to your chart.

5 Click **Color** to view color schemes for your chart.

6 Click a color scheme.

D Excel applies the new color scheme to your chart.

E You can click again to close the Chart Styles pane.

Change the Chart Layout

You can customize your chart's appearance by using Excel's preset chart-layout options to change the chart layout. Changing the chart layout changes how Excel positions chart elements. For example, you may prefer to show a legend on the side of the chart rather than on the bottom. Or, you might want a chart title to appear above the chart rather than below it. Or, you might not want to display a chart title at all.

The various preset chart layouts are available on the Design tab. To display this tab, select the chart whose layout you want to change by clicking any chart edge.

Change the Chart Layout

① Click an edge of the chart to select it.

A Handles surround the chart.

② Click the **Design** tab.

3 Click Quick Layout.

B A palette of layouts appears.

You can point the mouse at each layout to preview its appearance.

4 Click a layout.

C Excel applies the new layout to the existing chart.

Add Chart Elements

You can add a variety of elements to your chart. For example, you can include or exclude axes, axis titles, a chart title, data labels, a data table, error bars, gridlines, a legend, and a trendline. Remember that displaying too many elements on a chart can make it hard to understand. Because a picture — a chart, in this case — is supposed to be worth 1,000 words, making a chart difficult to understand by including too many elements defeats the purpose of presenting the chart. This section shows you how to add axis titles; you use the same technique to add any chart element.

Add Chart Elements

① Click an edge of the chart to select it.

A Handles surround the chart.

② Click .

B The Chart Elements pane appears.

You can point the mouse at an element to preview it.

③ Select a new element to add or deselect an element to remove (changes to or changes to).

You can click  again to close the Chart Elements pane.

C Excel applies the change to your chart.

Note: If you add any type of title, Excel inserts dummy text representing the title.

D You can change the dummy title text. Click the title box to select it. Click again inside the box and select the dummy text. Then, type your replacement title.

Format Chart Objects

You can change the formatting of any element, or *object*, in a chart, such as the background pattern for the plot area or the color of a data series. You use the Format pane to apply formatting to selected objects. The pane appears automatically when you format an object.

The available settings in the Format pane change, depending on the object you select. This section shows you how to add a fill color to the chart area, which is the area behind your data in the chart. You can apply these same techniques to format other chart objects.

Format Chart Objects

- 1 Click the object that you want to format.

To add a fill to the chart area, select the chart by clicking an edge of the chart, as shown in this example.

- 2 Click the **Format** tab.
- 3 Click **Format Selection**.

A The Format pane appears.

Note: The options available in the pane change, depending on the object you selected in Step 1.

B You can click ▾ to display other chart elements to format.

C You can click here to display chart area fill, effects, or size and properties formatting you can apply.

D You can click here to apply a variety of text formatting to the chart area.

④ Click the type of formatting that you want to change.

E Excel displays the effect.

⑤ Change any format settings.

⑥ Click ✕ to close the Format pane.

Change the Chart Data

You can quickly and easily filter the information displayed in your chart. Whenever you change data referenced in your chart, Excel automatically updates the chart to reflect your changes. But suppose that your chart shows several months of sales data for several products and you want to focus on one month only. There is no need to create a new chart; you can simply filter your existing chart. Similarly, you can display sales data for only certain products instead of all products, again, without creating a new chart. When you are ready, you can easily redisplay all data in your chart.

Change the Chart Data

- ① Click an edge of the chart that you want to change to select it.
 - ② Click .
- A Handles surround the chart.
- ③ Click next to the series or category you want to include in the chart.
 - ④ Click next to the series or category you want to exclude from the chart.
 - ⑤ Click **Apply**.

B The Filter pane appears.

You can point the mouse at an element to preview it.

3 Deselect a series or category that you want to remove (changes to).

4 Repeat Step 3 as necessary to remove additional series or categories.

5 Click **Apply**.

C Excel applies the change to your chart.

6 Click again to close the Filter pane.

Using Sparklines to View Data Trends

You can place a micro-chart of data in a single cell in your worksheet. Excel refers to these micro-charts as *sparkline* charts.

You can create three types of sparkline charts: line, column, or win/loss. All three show you, at a glance, trend information for a range of data you select. Excel places a sparkline chart in the cell immediately beside the cells you use to create the chart; if that cell contains data, Excel places the chart on top of the data, obscuring it but not deleting it. You can then move the sparkline chart to any cell you choose.

Using Sparklines to View Data Trends

Insert a Sparkline Chart

Note: To avoid later moving a sparkline chart, make sure an empty cell appears beside the cells you intend to chart.

- 1 Select the cells containing the data you want to include in the

sparkline chart.

- 2 Click  to display Quick Analysis categories.
- 3 Click Sparklines.
- 4 Click the type of sparkline chart you want to insert.

This example creates a column sparkline chart.

- A Excel inserts the sparkline chart in the cell immediately next to the selected cells.
- B The Sparkline Tools tab appears.
- C Any data in the cell containing the sparkline becomes obscured but remains in the worksheet, as you can see in the Formula bar.

Move a Sparkline Chart

- 1 Click the cell containing a sparkline chart that you want to move.
- 2 Click the **Design** tab.
- 3 Click **Edit Data**.

The Edit Sparklines dialog box appears.

- 4 Select a new location in the worksheet for the sparkline chart(s).

Note: The number of cells you select at the new location must match the number of sparklines you want to move.

- 5 Click **OK**.

D Excel moves the sparkline chart(s).

E Any previously obscured data becomes visible.

Note: To delete a sparkline chart, right-click it and point to Sparklines. Then, click **Clear Selected Sparklines** or **Clear Selected Sparkline Groups**.

TIPS

Can I create multiple sparkline charts simultaneously?

Yes. You can select data on multiple rows; Excel creates a sparkline chart for each row and treats the sparkline charts as a group; for example, if you change the chart type of one sparkline, Excel changes the group.

Can I change the type of sparkline chart?

Yes. Click the cell containing the sparkline to display the Sparkline

Tools Design tab; in the Type group, click a different chart type.

Part IV: PowerPoint

PowerPoint is a presentation program that you can use to create slide shows to present ideas to clients, explain a concept or procedure to employees, or teach a class. In this part, you learn how to create slide shows; how to add text, artwork, and special effects to them; and how to package them on a CD-ROM.

Dependencies and Resources

Chapter 13: Creating a Presentation

Chapter 14: Populating Presentation Slides

Chapter 15: Assembling and Presenting a Slide Show

Chapter 13: Creating a Presentation

Build a Blank Presentation

When you first start PowerPoint, the PowerPoint Start screen appears. From it — or, if PowerPoint is already open, from Backstage view — you can choose to create a new blank presentation or you can search for a presentation template or theme to use as the foundation of your presentation. When you create a blank presentation, PowerPoint sets up a single slide; you can add more slides and format them as needed.

Building a presentation in this manner, rather than choosing from one of PowerPoint's existing templates, allows you the freedom to create your own color schemes and apply your own design touches.

Build a Blank Presentation

From the Start Screen

- 1 Start PowerPoint.

The PowerPoint Start screen appears.

2 Click Blank Presentation.

A PowerPoint creates a new presentation with one blank slide.

From Backstage View

1 Click the File tab.

2 Click New.

3 Click Blank Presentation.

B PowerPoint creates a new presentation with one blank slide.

TIP

What is the default aspect ratio for PowerPoint slides, and can I change it?

The default aspect ratio is 16:9, but, if you regularly need to present using a 4:3 aspect ratio, you can change the default size for your slides by following these steps. Apply the 4:3 aspect ratio to your slides (see the section “Change the Slide Size,” later in this chapter). Click the **Design** tab, and click in the Themes group. Click **Save Current Theme**. In the Save Current Theme dialog box, type the name of the theme, and then click **Save**. In the Themes Gallery on the Design tab, right-click the saved theme. (When you point the mouse at a theme in the gallery, a tip showing the theme name appears.) Click **Set as**

Default Theme from the menu that appears.

Create a Presentation Using a Template

PowerPoint templates can help you quickly create a professional-looking presentation. Templates contain *themes* that make up the design of the slide. Themes are groups of coordinated colors, fonts, and effects such as shadows, reflections, and glows. See Chapter 14 for more information on themes.

Templates contain more than just themes, though. For example, they can contain prompts to help you set up the slides in the presentation for a particular subject. In addition to a theme, a template for a scientific presentation might contain slides that prompt you to include a statement of the problem, a hypothesis, a list of variables, and so on.

Create a Presentation Using a Template

- 1 Click the File tab.

② Click **New**.

③ Click here and type a search term and click or press **Enter**.

A PowerPoint displays a category list you can use to limit the search.

B Potential templates appear here.

④ Click a template.

PowerPoint displays a preview of the template design.

- C** You can click these buttons to scroll through the slides in the template.
- D** A description of the template appears here.
- E** You can click these buttons to view other templates in the preview window.
- 5** Click **Create**.

F PowerPoint creates the presentation using the template you chose.

You can add your own text to each slide; see Chapter 14 for details.

TIP

What does the Home button on the New tab do?

Before you type a search term, a series of suggested search terms appear below the search box (**A**). You can click one of those search terms instead of typing in the search box. After you search for a term, you can click the **Home** button to redisplay the original suggested search terms so that you can use them again if you want.

New

Search for online templates and themes

A

Suggested searches: Business Calendars

Create a Photo Album Presentation

You can quickly turn any collection of digital photos on your computer into a slide show presentation in PowerPoint. For example, you might compile your photos from a recent vacation into a presentation. Alternatively, you might gather your favorite photos of a friend or loved one in a presentation. To liven up the presentation, you can include captions with your photos. You can also vary the layout of slides, including having one (the default), two, three, or more photos per slide. You can then share the presentation with others, or e-mail the file to family and friends.

Create a Photo Album Presentation

① Click the **Insert** tab.

② Click **Photo Album**.

The Photo Album dialog box appears.

③ Click the **File/Disk** button.

The Insert New Pictures dialog box appears.

④ Navigate to the folder or drive containing the digital pictures that you want to use.

⑤ Click the pictures that you want to use.

To use multiple pictures, you can press and hold **ctrl** while clicking the pictures.

⑥ Click **Insert**.

A You can change the picture order using these buttons.

B To remove a picture, you can select it in the Pictures in Album list (□ changes to) and then click **Remove**.

C You can use the tool buttons to change the picture orientation, contrast, and brightness levels.

7 Click **Create**.

PowerPoint creates the slide show as a new presentation file.

D Each picture appears on its own slide.

E The first slide in the show is a title slide, containing the title “Photo Album” and your username.

TIP

How do I fit multiple pictures onto a single slide and add captions?

Click the **Insert** tab, and then click ▾ beside **Photo Album** and choose **Edit Photo Album**. In the Edit Photo Album dialog box, click the **Picture layout** ▾ and choose to display as many as four pictures on a slide, with or without title text (A). Select **Captions below All pictures** (□ changes to)(B). If this option is grayed out, choose a different Picture Layout option. Click **Update** (C). You can type your captions after closing the Photo Album dialog box.

Change PowerPoint Views

You can use views in PowerPoint to change how your presentation appears on-screen. By default, PowerPoint displays your presentation in Normal view, with thumbnails of each slide showing the order of slides in your presentation. You can view the Outline tab to see your presentation in an outline format, or switch to Slide Sorter view to see all the slides at the same time.

In addition to changing PowerPoint views, you can use the PowerPoint zoom settings to change the magnification of a slide. You can also change the size of the panes in the PowerPoint window, making them larger or smaller as needed.

Change PowerPoint Views

Using Normal View

- ① Click the **View** tab.
- ② Click the **Normal** button.

A You can also use these buttons to switch views.

B Thumbnails of slides appear here.

C The currently selected slide appears here; its thumbnail displays an orange border.

Using Outline View

1 Click **View**.

2 Click **Outline View**.

D PowerPoint displays the presentation in an outline format.

E You can click the outline text to edit it.

F You can click a slide icon to view the slide.

Using Reading View

① Click .

Note: You can also click the **View** tab and then click **Reading View**. PowerPoint hides the ribbon and fills the screen with the first slide in the presentation.

G To view the next slide, click the slide or click .

H To view the previous slide, click .

I To display a menu of available options while reading a presentation, click .

J You can click  to redisplay the presentation in Normal view.

Using Slide Sorter View

① Click the **View** tab.

② Click the **Slide Sorter** button.

PowerPoint displays thumbnails of all slides in the presentation.

K Under each slide is a number representing its position in the presentation.

You can drag any slide to reposition it in the presentation.

You can double-click a slide to switch to Normal view and display the slide's content.

TIPS

How do I zoom my view of a slide?

You can drag the **Zoom** slider, which appears beside the view buttons on the status bar at the bottom of the PowerPoint window. Or, you can click the **View** tab, click the **Zoom** button, and choose the desired magnification in the Zoom dialog box that opens. Click the **Fit to Window** button on the View tab to return slides to the default size for

the current view.

Can I resize the PowerPoint pane?

Yes. Position the mouse pointer over the pane's border. When  changes to , click and drag inward or outward to resize the pane.

Insert Slides

PowerPoint makes it easy to add more slides to a presentation. To add a slide, you use the New Slide button on the Home tab. Clicking the top half of the New Slide button adds a slide with the same layout as the one you selected in the Slides pane; alternatively, you can click the bottom half of the button and select a different layout.

You can add and remove slides on the Slides tab in Normal view, or you can switch to Slide Sorter view and manage your presentation's slides.

Insert Slides

- 1 Click the thumbnail of the slide after which you want to insert a new slide.

2 Click the **Home** tab.

3 Click the bottom half of the **New Slide** button.

Note: Clicking the top half of the New Slide button adds a slide with the same layout as the one you selected in Step 1.

A A gallery of slide layouts appears.

4 Click a slide layout.

B PowerPoint adds a new slide after the one you selected in Step 1.

C The new slide uses the layout you selected in Step 4.

TIPS

What happens if I click the Slides from Outline command?

You can use this command to create a presentation from an outline you created in another program, such as Microsoft Word. PowerPoint creates one slide for each heading style you applied; if you did not apply heading styles to the outline, PowerPoint creates slides for each paragraph.

Can I duplicate several slides simultaneously?

Yes. Select the slides you want to duplicate; you can press and hold **Ctrl** as you click each slide. Then, click the bottom of the **New Slide** button and click **Duplicate Selected Slides**. PowerPoint inserts all of the duplicate slides after the last slide you selected.

Change the Slide Layout

PowerPoint includes several predesigned slide layouts that you can apply to your slide. For example, you might apply a layout that includes a title with two content sections or a picture with a caption.

For best results, you should assign a new layout before adding content to your slides; otherwise, you may need to make a few adjustments to the content's position and size to fit the new layout. If you find that you do not like a style element, you can make style changes to all slides in your presentation so that you maintain a uniform appearance throughout your presentation.

Change the Slide Layout

- 1 Click the slide whose layout you want to change in the Slides tab.

- 2 Click the **Home** tab.
- 3 Click the **Layout** button.

- A A gallery of slide layouts appears.
- B The currently selected layout is highlighted.

4 Click a layout.

C PowerPoint assigns the layout to the slide.

TIP

How do I make a style change that affects all slides in my presentation?

You can use the Slide Master. Suppose that you do not like the font you selected for your presentation. Using the Slide Master, you can change the font on all slides in one action. Click the View tab and then click **Slide Master**. PowerPoint displays the Slide Master tab. Make the changes you desire; for example, select a different font for the presentation. When you finish, click the **Close Master View** button to hide the Slide Master tab. Your new font appears on every slide in your presentation.

Change the Slide Size

You can easily change the size of your presentation's slides. In earlier versions of PowerPoint, slides used the 4:3 aspect ratio that was common on televisions. To accommodate widescreen and high-definition formats, PowerPoint 2013's default slide size uses an aspect ratio of 16:9.

If you change the size of a slide that contains content, PowerPoint attempts to scale your content; if it cannot, PowerPoint offers to maximize the content to ensure that it fits. If you opt to maximize the content, it is larger but may not fit on the slide. If you apply the Ensure Fit option, your content is smaller but fits on the slide.

Change the Slide Size

- 1 Open the presentation containing the slides you want to resize.

- 2 Click the **Design** tab.

- ③ Click **Slide Size**.
- ④ From the drop-down list that appears, click **Standard**.
PowerPoint displays a message, asking how you want to handle content on the new slide size.

- A Click **Maximize** to increase the size of the slide content when you scale to a larger slide size. Be aware that your content might not fit on the slide.

B Click **Ensure Fit** to decrease the size of your content when you scale to a smaller slide size. Although the slide content might appear smaller, you can see all content on your slide.

C PowerPoint resizes all of the slides in the presentation.

Note: You might need to reapply a theme.

TIP

Can I establish a size for my slides other than 4:3 or 16:9?

Yes. Complete Steps 1 to 3 and, from the drop-down menu, click **Custom Slide Size**. In the dialog box that appears, use the **Slides sized for** (A) to select a slide size. You can also specify slide width, height, numbering, and orientation. Click **OK** to apply your changes.

Chapter 14: Populating Presentation Slides

Add and Edit Slide Text

All slide layouts except for the blank slide layout are designed to automatically hold some text. To help you enter text, PowerPoint includes a text box that contains placeholder text, such as “Click to add title,” “Click to add subtitle,” or “Click to add text.” You can replace the placeholder text with your own text by typing directly in the slide.

After you add your text, you can change its font, size, color, and more, as shown in the next section.

Add and Edit Slide Text

Add Slide Text

1 Click the text box to which you want to add text.

PowerPoint hides the placeholder text and displays an insertion point.

- ② Type the text that you want to add.
- ③ Click anywhere outside the box to save your typing.

Edit Slide Text

- ① Click in the text box where you want to edit the contents.

PowerPoint selects the text box and displays an insertion point in the text box.

② Make any changes that you want to the slide text.

You can use the keyboard arrow keys to position the insertion point in the text, or you can click where you want to make a change.

③ When you finish, click anywhere outside the text box.

TIP

What should I do if my text does not fit in the text box, or fit the way I want?

You can resize the text, as described in the next section, or you can drag one of the handles of the text box to enlarge it, as shown here. When you position the mouse pointer over a handle, it changes to ↗, ↘, ↙, or ↛. When you drag, the mouse pointer changes to + (A).

- The state bird is: Cactus Wren
- The state flower is:
- The state tree is:

A +

Change the Font, Size, and Color

After you add text to a slide (as described in the previous section, “Add and Edit Slide Text”), you can change the text’s font, size, color, and style to alter its appearance. For example, you might choose to increase the size of a slide’s title text to draw attention to it, or change the font of the body text to match the font used in your company logo.

Alternatively, you might change the text’s color to make it stand out against the background color. You can also apply formatting to the text, such as bold, italics, underlining, shadow, or strikethrough.

Change the Font, Size, and Color

Change the Font

- 1 Click inside the text box and select the text that you want to edit.
- 2 Click the **Home** tab.
- 3 Click the **Font** ▾.
- 4 Click a font.

A PowerPoint applies the font you chose to the selected text.

You can click anywhere outside the text box to continue working.

Change the Size

1 Click inside the text box and select the text that you want to edit.

- 2** Click the **Home** tab.
- 3** Click the **Font Size ▾**.
- 4** Click a size.

B PowerPoint applies the font size you chose to the selected text.

You can click anywhere outside the text box to continue working.

TIPS

Is there a quicker way to change the text size?

Yes. To quickly increase or decrease the font size, you can select the text you want to change and then click the **Increase Font Size (A⁺)** or **Decrease Font Size (A⁻)** button in the Home tab's Font group as many times as needed until the text is the desired size.

How do I apply text formatting?

Select the text whose format you want to change, and then click the

Bold button (**B**), the **Italic** button (**I**), the **Underline** button (**U**), the **Text Shadow** button (**S**), or the **Strikethrough** button (**abc**).

In addition to changing the text's font and size, you can change its color. You might do so to make the text stand out better against the background, or to coordinate with colors used in other slide elements such as photographs.

You can change the text color in a few different ways. For example, you can select a color from the Font Color button on the Home tab, or you can open the Colors dialog box and select a color from the palette that appears. In addition, you can apply your own custom color to text.

Change the Font, Size, and Color

Choose a Coordinating Color

- 1 Click in the text box and select the text that you want to edit.
- 2 Click the **Home** tab.

3 Click ▾ next to the **Font Color** button (A ▾).

A PowerPoint displays coordinating theme colors designed to go with the current slide design.

4 Click a color.

B PowerPoint applies the color you chose to the selected text.

You can click anywhere outside the text box to continue working.

Choose a Color in the Colors Dialog Box

- 1 Click in the text box and select the text that you want to edit.
- 2 Click the **Home** tab.
- 3 Click ▾ next to the **Font Color** button (A ▾).
- 4 Click **More Colors...**.

The Colors dialog box appears.

- 5 Click the **Standard** tab.
- 6 Click a color.

C A comparison between the current and new colors appears here.

7 Click **OK**.

PowerPoint applies the color you chose to the selected text.

You can click anywhere outside the text box to continue working.

TIP

How do I set a custom color?

You can set your own custom color for use with the slide text or other slide elements. Follow these steps:

- 1** Open the Colors dialog box, as shown in this section, and click the **Custom** tab.
- 2** Click the color that you want to customize.
- 3** Drag the intensity arrow to adjust the color intensity.
- A** You can also adjust the color channel settings.
- 4** Click **OK**.

Apply a Theme

PowerPoint includes a variety of preset designs, called themes. A *theme* is a predesigned set of colors, fonts, backgrounds, and other visual attributes. When you apply a theme to your presentation, you give every slide in your presentation the same look and feel. Alternatively, you can apply a theme to selected slides in your presentation. After you apply the theme, you can use controls in the Design tab to change various aspects of the theme.

Themes are shared among the Office programs; you can use the same theme in your PowerPoint presentations that you have applied to worksheets in Excel or documents in Word.

Apply a Theme

Note: To apply a theme to selected slides, press and hold **Ctrl** as you click each slide thumbnail in Normal view.

- 1 Click the **Design** tab.

A In the Themes group, you can click ▲ and ▼ to scroll through the palette of themes.

B Alternatively, you can click □ to view all available themes.

② Click a theme.

C PowerPoint applies the theme. Any slides you add will use the same theme.

D You can use these controls to select a color variant of the theme.

Set Line Spacing

You can change the line spacing in a PowerPoint slide to create more or less space between lines of text in the slide. For example, you might want to increase line spacing from the 1.0 setting to a larger setting so the text fills up more space in the text box, or to make the text easier to read. If, after increasing the line spacing, your text does not fit in the text box, you can reduce the line spacing or increase the size of the text box, as described in the tip in the section “Add and Edit Slide Text.”

Set Line Spacing

- 1 Click in the text box and select the text that you want to edit.
- 2 Click the **Home** tab.
- 3 Click the **Line Spacing** button ().
- 4 Click a line spacing amount.

NOTE COMMENTS

29%

A PowerPoint applies the line spacing. This example applies 1.5 spacing.

You can click anywhere outside the text box to continue working.

Align Text

By default, PowerPoint centers most text in text boxes (bulleted lists are left-aligned). If you want, you can use PowerPoint's alignment commands, located on the Home tab, to change how text is positioned horizontally in a text box. You can choose to center text in a text box (using the Center command), align text to the right side of the text box (using the Right Align command), or justify text and objects so they line up at both the left and right margins of the text box (using the Justify command).

Align Text

- ① Click in the text box containing the text that you want to align.
- ② Click the **Home** tab.
- ③ Click an alignment button:

Click the **Align Left** button (≡) to align the text to the left side of the text box.

Click the **Center** button (≡) to align the text in the center of the text box.

Click the **Align Right** button (≡) to align the text to the right side of the text box.

Click the **Justify** button (≡) to justify text between the left and right margins.

A PowerPoint applies the formatting. In this example, the text is centered between the left and right margins of the text box.

You can click anywhere outside the text box to continue working.

Add a Text Box to a Slide

Typically, you insert slides containing a predefined layout. You can customize the slide layout, however, by adding a new text box to it. A text box is simply a receptacle for text in a slide. (For help adding text to a text box, refer to the section “Add and Edit Slide Text,” earlier in this chapter.)

When you add a new text box to a slide, you can control the placement and size of the box. (For help moving and resizing text boxes and other slide objects, see the sections “Move a Slide Object” and “Resize a Slide Object,” later in this chapter.)

Add a Text Box to a Slide

- ① In Normal view, click the slide to which you want to add a text box.
- ② Click the **Insert** tab.
- ③ Click the **Text Box** button.

When you move the mouse pointer over the slide, changes to .

- 4 Click at the location where the upper-left corner of the text box should appear, and drag down and to the right (| changes to +).
A As you drag, an outline represents the text box.

- 5 Release the mouse button to complete drawing the text box.

B The insertion point appears in the new text box.

- 6 Type your text.

You can click anywhere outside the text box to continue working.

Add a Table to a Slide

You can customize the layout of a slide by adding a table to it. You can add tables to your slides to organize data in an orderly fashion. For example, you might use a table to display a list of products or classes. Tables use a column-and-row format to present information.

After you add the table to your slide, you can control the placement and size of the table. (For help moving and resizing tables and other slide objects, see the sections “Move a Slide Object” and “Resize a Slide Object,” later in this chapter.)

Add a Table to a Slide

- ➊ Click the slide to which you want to add a table.
- ➋ If an **Insert Table** icon (grid) appears in your slide, click it.
- A If an Insert Table icon does not appear in your slide, click the **Table** button on the Insert tab and choose **Insert Table**.

The Insert Table dialog box appears.

- ③ Type the number of columns that you want to appear in the table.
- ④ Type the number of rows that you want to appear in the table.

Note: If you need more rows, just press **Tab** in the last table cell, and PowerPoint automatically adds a row.

- ⑤ Click **OK**.

B PowerPoint inserts the table into the slide.

C PowerPoint displays the Table Tools tabs.

D You can change the table's appearance by clicking a style in the Table Styles group.

Date	Fact
1539	Marcos de Niza, a Spanish Franciscan friar, was the first European to explore Arizona, looking for the mythical Seven Cities of Gold.
1775	The Spanish established Fort Tucson.
1848	Most of the Arizona Territory became part of the U.S.
1853	The Gadsden Purchase added the southern portion of the Arizona Territory.
1912	Arizona became the 48 th state on February 14, 1912.

6 Click inside the first table cell and type your data.

You can press **Tab** to move to the next table cell.

7 Continue typing in each cell to fill the table.

E You can use the tools in the Layout tab to merge or split table cells, change alignment, add borders, and more.

F You can resize columns or rows by dragging their borders.

When you finish typing table data, click anywhere outside the table to continue working.

TIP

How do I add a row or column to my table?

To add a row to the bottom of the table, click in the last table cell and press **Tab**. To insert a row in the middle of the table or add a column anywhere in the table, follow these steps:

The screenshot shows a Microsoft PowerPoint slide titled "State History". The slide features a table with two columns: "Date" and "Fact". The table has five rows, each containing a date and a corresponding historical fact about Arizona. The "Layout" tab is selected in the ribbon. A red circle with the number 2 is on the ribbon. A red circle with the number 3 is on the "Insert" button in the ribbon. An orange arrow labeled 'A' points to the table. A red circle with the number 1 is on the bottom right corner of the table.

Date	Fact
1539	Marcos de Niza, a Spanish Franciscan friar, was the first European to explore Arizona, looking for the mythical Seven Cities of Gold.
1775	The Spanish established Fort Tucson.
1848	Most of the Arizona Territory became part of the U.S.
1853	The Gadsden Purchase added the southern portion of the Arizona Territory.
1912	Arizona became the 48 th state on February 14, 1912.

- ➊ Click in a cell adjacent to where you want to insert a new row or column.
 - ➋ Click the **Layout** tab.
 - ➌ Click one of these buttons.
- A PowerPoint inserts a new row or column.

Add a Chart to a Slide

You can customize the layout of a slide by adding a chart to it. You might add a chart to a PowerPoint slide to turn numeric data into a visual element that your audience can quickly interpret and understand. When you add a chart, PowerPoint launches an Excel window, which you use to enter the chart data.

After you add a chart to a slide, you can control the placement and size of the chart. (For help moving and resizing charts and other slide objects, see the sections “Move a Slide Object” and “Resize a Slide Object,” later in this chapter.)

Add a Chart to a Slide

- ① If an **Insert Chart** icon (chart icon) appears in your slide, click it.
- A If an Insert Chart icon does not appear in your slide, click the **Chart** button on the Insert tab.

The Insert Chart dialog box appears.

② Click a chart category.

③ Click a chart type.

B A preview of the chart appears here.

④ Click OK.

C PowerPoint displays a sample chart on the slide.

D The Excel program window opens.

5 Replace the placeholder data with the chart data that you want to illustrate.

You can press Tab to move from cell to cell.

E PowerPoint updates the chart to reflect the data you enter.

6 Click the Close button (×) to close the Excel window.

F As long as the chart is selected, PowerPoint displays the Chart Tools tabs.

7 Click the **Design** tab.

G To edit the chart data, click the **Edit Data** button.

H Click a Chart Styles button to change the chart style.

TIPS

Can I insert an existing Excel chart into my PowerPoint slide?

Yes. You can use the Copy and Paste commands to copy an Excel chart and insert it into a PowerPoint slide. To learn more about copying and pasting data between Office programs, see Chapter 2.

How do I make changes to my chart formatting?

When you click a chart in a PowerPoint slide, the Ribbon displays two

tabs: **Design**, with options for changing the chart type, layout, data, elements, and style; and **Format**, with tools for changing fill colors and shape styles.

Add a Video Clip to a Slide

You can add video clips to your PowerPoint slides to play during a slide show presentation. For example, when creating a presentation showcasing the latest company product, you might place a video clip of the department head discussing the new item.

After you add a video to a slide, you can control the placement and size of the video. (For help moving and resizing video clips and other slide objects, see the sections “Move a Slide Object” and “Resize a Slide Object,” later in this chapter.) You can also make certain edits to the video from within PowerPoint.

Add a Video Clip to a Slide

- ➊ If an **Insert Media Clip** icon (☞) appears in your slide, click it.
- ⠁ If an Insert Media Clip icon does not appear in your slide, click the **Video** button on the Insert tab and choose **Online Video** or **Video on My PC**.

The Insert Video window appears.

Note: You can browse for videos on your computer, your SkyDrive, or using Bing Search or YouTube, or you can supply an embed code for a video stored on a website. This example browses your computer.

② Click a location containing the video clip.

The Insert Video dialog box appears.

- 3 Navigate to the folder containing the video file.
 - 4 Select the video.
 - 5 Click **Insert**.

The screenshot shows a Microsoft PowerPoint slide titled "Chart.pptx - PowerPoint". The slide contains the text "IN CLOSING" and a video placeholder showing a large flock of birds. Several orange callouts point to specific features:

- B**: Points to the video preview window in the ribbon.
- C**: Points to the "FORMAT" tab in the ribbon.
- D**: Points to the "Video Styles" section in the ribbon.
- E**: Points to the "Size" and "Crop" options in the ribbon.
- F**: Points to the play button and timeline controls at the bottom of the video placeholder.

B PowerPoint inserts the clip into the slide.

C PowerPoint displays the Format tab of the Video Tools tabs.

D You can click an option in the Video Styles group to change the appearance of the video.

E You can use the options in the Size group to adjust the size of the clip on the slide.

F You can click the **Play** button (▶) to play back the clip.

TIP

What tools appear on the Playback tab?

You can use the settings in the Video Options group to specify options such as when the clip should start playing, whether it should be looped, and how loudly it should play. You can edit your video using the tools in the Editing group; using the **Fade In** and **Fade Out** fields, you can set up the clip to fade in and fade out. You can also click the **Trim Video** button to open the Trim Video dialog box, where you can change the duration of the video by trimming frames from the beginning or end of the clip.

Move a Slide Object

You can move any element on a slide — a text box, table, chart, picture, video clip, or graphic — to reposition it. These slide elements are often referred to as objects. For example, you might move a text box to make room for a video clip or reposition a picture to improve the overall appearance of the slide.

You can move a slide object using the standard Office Cut and Paste buttons, discussed in Chapter 2. Or, you can drag and drop the object, as discussed in this section.

Move a Slide Object

- 1 Click the slide containing the object that you want to move.
- 2 Select the slide object by clicking it (▶ changes to ✎).

Note: To select a table or a chart, slide the mouse pointer along any of the object's edges. Click when you see the ✎ mouse pointer.

3 Drag the object to a new location on the slide. As you drag, * changes to +.

4 Release the mouse button.

A PowerPoint repositions the object.

You can click anywhere outside the slide object to continue working.

Resize a Slide Object

After you insert a slide object — a text box, table, chart, picture, video clip, or graphic — you may find that you need to make it larger or smaller to achieve the desired effect. For example, you might want to resize a text box to make room for more text or resize a picture object to enlarge the artwork. Fortunately, PowerPoint makes it easy to change the size of a slide object. When you select an object in a PowerPoint slide, handles appear around that object; you use these handles to change the object's size.

Resize a Slide Object

- ① Click the slide containing the object that you want to resize.
 - ② Click the object to select it.
- A PowerPoint surrounds the object with handles (☞).
- ③ Position the mouse pointer over a handle. ☞ changes to ↗, ↙, ↛, or ↚.

Use a corner handle to resize the object's height and width at the same time.

Use a side handle to resize the object along only the one side.

④ Click and drag the handle inward or outward to resize the slide object (↖, ↗, ↙, or ↛ changes to +).

⑤ Release the mouse button.

B PowerPoint resizes the object.

You can click outside the slide object to continue working.

Note: To delete an object that you no longer need, select the object and press **Delete**.

Chapter 15: Assembling and Presenting a Slide Show

Reorganize Slides

You can change the order of the slides in your presentation. For example, you might want to move a slide to appear later in the presentation, or swap the order of two adjacent slides. You can move individual slides, or move multiple slides at once.

You can change the slide order in Slide Sorter view or in Normal view; choose the view based on the distance from the original position to the new position. If you need to move a slide only a few positions, use Normal view. Slide Sorter view works best when you need to move a slide to a new position several slides away.

Reorganize Slides

Move Slides in Normal View

- 1 Click to switch to Normal view.
- 2 Click to select the slide you want to move.

Note: To move multiple slides, select them by pressing and holding **Ctrl** as you click each slide.

3 Drag the slide to a new position.

A As you drag, changes to .

4 Release the mouse button.

B PowerPoint moves the slide.

Move Slides in Slide Sorter View

- 1 Click to switch to Slide Sorter view.
- 2 Click the slide that you want to move to select it.
- 3 Drag the slide to a new location in the presentation.
- C As you drag, changes to .
- 4 Release the mouse button.

D PowerPoint moves the slide.

TIPS

How do I hide a slide?

Suppose you frequently give the same presentation, but your next audience does not require the information in one of the presentation slides. In that case, you can hide the slide. Click the slide, click the **Slide Show** tab, and then click the **Hide Slide** button. PowerPoint crosses out the slide. To unhide the slide, repeat these steps.

How do I delete a slide?

To delete a slide, click the slide and then click the **Cut** button () on the **Home** tab, or right-click the slide and choose **Delete Slide** from the menu that appears.

Reuse a Slide

Suppose you are creating a new PowerPoint presentation, but you want to reuse a slide from an old one. Assuming the presentation containing the slide you want to reuse has been saved on your hard drive or is accessible to you via a network connection, you can easily do so. You can choose the slide you want to reuse in the Reuse Slides pane.

When you reuse a slide, PowerPoint updates the slide to match the formatting used in the new presentation. You can reuse a single slide from a presentation, multiple slides from a presentation, or all the slides in a presentation.

Reuse a Slide

- ① Click the slide that you want to appear before the new slide.
- ② Click the **Home** tab.
- ③ Click the bottom half of the **New Slide** button.
- ④ Click **Reuse Slides...**.

A The Reuse Slides pane opens.

- 5 Click the **Browse** button.
- 6 Click **Browse File**.

The Browse dialog box opens.

7 Locate and select the presentation containing the slide you want to reuse.

8 Click Open.

B PowerPoint populates the Reuse Slides pane with slides from the presentation you selected.

9 Click the slide you want to reuse.

C PowerPoint adds the slide to your presentation after the slide you clicked in Step 1.

TIPS

Can I retain the reused slide's original formatting?

Yes. To retain the reused slide's original formatting, select **Keep source formatting** (changes to) in the Reuse Slides pane. To change all the slides in the new presentation to match the reused slide, right-click the reused slide in the Reuse Slides pane and choose **Apply**.

Theme to All Slides.

How do I reuse all the slides in a presentation?

To reuse all the slides in a presentation, right-click any slide in the Reuse Slides pane and choose **Insert All Slides**. PowerPoint inserts all the slides from the existing presentation into the new presentation.

Organize Slides into Sections

If your presentation has a large number of slides, keeping it organized can be difficult. To more easily manage your slides, you can organize them into sections. For example, you might group all the slides that will be displayed during your introductory speech into a section called “Introduction,” place the slides that pertain to your first topic of discussion into a section called “Topic 1,” and so on.

Organizing a presentation into sections can also help you move slides around in the presentation. Instead of moving individual slides, you can move sections.

Organize Slides into Sections

- ➊ Click the slide that marks the beginning of the section you want to create.
- ➋ Click the **Home** tab.
- ➌ Click the **Section** button.

4 Choose Add Section.

PowerPoint adds a section marker before the slide you selected, adding all slides below the marker to the section.

5 Right-click the section marker.

6 Choose Rename Section.

The Rename Section dialog box appears.

7 Type a name for the new section.

8 Click the Rename button.

- A PowerPoint applies the name to the section.
- 9 To hide the slides in a section, click the section marker's collapse button (-).
- B PowerPoint collapses the section and identifies the number of slides in the section.
- C You can click the section marker's expand button (+) to redisplay the slides in the section.

TIPS

How do I remove a section marker?

If you decide you no longer want to group a set of slides in a section, you can remove the section marker. To do so, right-click the section marker and choose **Remove Section** from the menu that appears. PowerPoint removes the marker.

How can I reorganize the sections in my presentation?

Reorganizing sections involves rearranging slides in the presentation. To reorganize the sections in your presentation, right-click a section's marker and choose **Move Section Up** or **Move Section Down** as many times as needed. PowerPoint moves the slides in the section accordingly.

Define Slide Transitions

You can add transition effects, such as fades, dissolves, and wipes, to your slides to control how one slide segues to the next. You can control the speed with which the transition appears. You can also specify how PowerPoint advances the slides, either manually using a mouse click or automatically after a time you specify passes. In addition to adding visual transition effects between your slides, you can add sound effects to serve as transitions.

Use good judgment when assigning transitions. Using too many different types of transitions might distract your audience from your presentation.

Define Slide Transitions

- ➊ Click  to switch to Slide Sorter view.
- ➋ Click the slide to which you want to apply a transition.
- ➌ Click the **TRANSITIONS** tab.

A Available transition effects appear in the Transition to This Slide group. You can click or to scroll through them or click the to view the gallery of transition effects.

4 Click a transition.

B PowerPoint adds an animation indicator below the slide's lower-right corner.

C You can click **Preview** to display a preview of the transition effect.

- 5 Click the **Duration** to specify a speed setting for the transition.
- D You can click **Apply To All** to apply the same transition to the entire slide show, and PowerPoint adds the animation indicator below every slide.

- ⑥ Under Advance Slide, select an advance option (changes to):
To use a mouse click to move to the next slide, select **On Mouse Click**.
To move to the next slide automatically, select **After** and use the spin box to specify a duration.

TIPS

How do I remove a transition effect?

In Slide Sorter view, select the slide containing the transition that you want to remove; then click the **Transitions** tab and click the **None** option in the Transition to This Slide group. PowerPoint removes the transition that you assigned.

How do I assign a sound as a transition effect?

To assign a sound transition, click the **Sound ▾** in the Timing group on the Transitions tab and select a sound. For example, you might assign the Applause sound effect for the first or last slide in a presentation.

Add Animation Effects

You can use PowerPoint's animation effects to add visual interest to your presentation. For example, if you want your audience to notice a company logo on a slide, you might apply an animation effect to that logo.

You can use four different types of animation effects: entrance effects, emphasis effects, exit effects, and motion paths. You can add any of these effects to any slide object. You can also change the direction of your animations. To avoid overwhelming your audience, limit animations to slides in which the effects will make the most impact.

Add Animation Effects

Add an Animation Effect

- 1 Click to display the presentation in Normal view.
- 2 Click the slide containing the object to which you want to apply an effect.

③ Click the object.

You can assign an animation to any object on a slide, including text boxes, shapes, and pictures.

④ Click the Animations tab.

A You can click ▲ and ▼ to scroll through the available animation effects or click □ to view the gallery of animation effects.

⑤ Click an animation effect.

B PowerPoint applies the effect and displays a numeric indicator for the effect.

C You can click the Preview button to preview the effect.

Change an Animation's Direction

- ① In Normal view, click the slide element containing the animation you want to edit.
 - ② Click the **Animations** tab.
 - ③ Click the **Effect Options** button.
- A list of direction options for the animation appears.
- ④ Select an option from the list.

D PowerPoint applies the change; the new direction appears on the Effect Options button.

E You can click Preview to preview the effect on the slide.

TIP

Can I copy an animation effect to another slide object?

Yes. PowerPoint's Animation Painter feature enables you to copy an animation effect applied to one slide object to another slide object. To copy an animation effect, select the slide object whose effect you want to copy; then, in the Animations tab's Advanced Animation group, click the **Animation Painter** button. Next, in the Slides tab, click the slide containing the object to which you want to apply the effect to display it; then click the object. PowerPoint copies the animation effect to the slide object.

Create a Custom Animation

In addition to applying a single animation effect to any given slide object — a text box, picture, chart, or table — you can create custom effects by applying two or more animations to a slide object. For example, you might opt to have a slide object “fly in” to the slide and then spin. You can use PowerPoint’s Animation pane when you create a custom effect to help you review and reorder the effect.

To create a custom animation effect, you use a combination of the technique described in the section “Add Animation Effects” and the technique described in this section.

Create a Custom Animation

- 1 Click to display the presentation in Normal view.
- 2 Click the slide containing the object to which you want to apply an animation.
- 3 Click the object.

4 Click the **Animations** tab.

5 Apply an animation effect.

Note: See the section “Add Animation Effects” for details.

6 Click the **Animation Pane** button.

A PowerPoint displays the Animation pane.

B The animation you applied appears in the pane.

7 To add your next animation, click the **Add Animation** button.

Note: You add an animation using the **Add Animation** button; if you choose from the Animation Gallery, PowerPoint overwrites the existing animation instead of adding a new one.

8 Click an animation effect.

PowerPoint adds the effect to the Animation pane.

9 Repeat Steps 7 and 8 to add more animation effects to the selected object.

C PowerPoint places each effect in the Animation pane in the order you add them.

⑩ To preview your custom effect, click the **Preview** button.

D You can also click the first effect in the Animation pane and then click **Play From**.

⑪ To change the order in which effects appear, click an effect and then click the **Move Up** button (□) or the **Move Down** button (□).

TIPS

How do I remove an animation?

Select the slide element containing the animation effect, click the **Animations** tab, and then click **None** in the Animation Gallery. If the animation is a custom animation, click the **Animation Pane** button. Then, in the Animation pane, click the effect that you want to remove, click the ▾ that appears, and click **Remove**.

Can I change the duration of an effect?

Yes. Select the slide element containing the effect, click the **Animation Pane** button, click the effect whose duration you want to change, click the ▾ that appears, choose **Timing**, and use the settings in the dialog box that opens to change the effect's duration.

Record Narration

Most presentations benefit from narration. You can speak as you present, or you can use PowerPoint's Record Narration feature to record a narration track to go along with the show. That way, you do not need to be present for your audience to receive the full impact of your presentation.

To record narration for a presentation, your computer must be equipped with a microphone. When you finish recording, an audio icon appears at the bottom of each slide for which you have recorded narration. When you save the presentation, PowerPoint saves the recorded narration along with the presentation file.

Record Narration

- ➊ Click the **Slide Show** tab.
 - ➋ Click **Record Slide Show**.
- A In the Record Slide Show dialog box, select **Narrations and laser**

pointer (changes to).

- ③ Click **Start Recording** to start the slide show, and speak into the computer's microphone.

- B Click to move to the next slide in the show and continue recording.
- C Click to pause the recording. To continue recording, click **Resume Recording** in the window that appears.
- D Click to start over on the current slide.
- ④ When you finish, right-click the last slide and click **End Show**. An audio indicator appears in the lower-right corner on each slide for which you record narration. You can click the indicator to hear that slide's narration.
- Note:** You do not need to record all narration at one time. End the show; to later complete the narration, select the first slide that needs narration. Then, click the **Slide Show** tab, click the bottom of the **Record Slide**

Show button and click From Current Slide.

Insert a Background Song

You can insert a song that plays repeatedly during your presentation. PowerPoint can play AIFF Audio (.aif), AU Audio (.au), MIDI (.mid or .midi), MP3 (.mp3), Advanced Audio Coding - MPEG-4 (.m4a, .mp4), Windows Audio (.wav), and Windows Media Audio (.wma) files.

If you choose music from a website, download it to your computer's hard drive before inserting it in your presentation; otherwise, as data flows to your computer from the Internet, your listener will experience breaks in the music.

Insert a Background Song

- 1 Click the first slide in your presentation.
- 2 Click the **Insert** tab.
- 3 Click **Audio**.
- 4 Click **Audio on My PC**.

The Insert Audio dialog box appears.

- 5 Navigate to and select the audio file you want to add to your presentation.
- 6 Click **Insert**.

- A An audio indicator and playback tools appear on the slide.
- B Audio Tools appear on the Ribbon.

- 7 Click **Play in Background**.

When you run your slide show (see the section “Run a Slide Show” for details), the song loops in the background from the first slide until the show ends.

Note: To decrease the size of your PowerPoint file, compress the audio file. Click **File**, click **Info**, and then click **Compress Media**. Select an audio quality and the compression automatically begins.

Create Speaker Notes

You can create speaker notes for your presentation. Speaker notes, also called notes pages, are notations that you add to a slide and that you can print out and use to help you give a presentation. You can also use speaker notes as handouts for your presentation. When creating notes pages, PowerPoint includes any note text that you add, as well as a small picture of the actual slide. You can add speaker notes in the Notes pane or on the Notes page.

You can print your speaker notes along with their associated slides. For details, see the tip at the end of this section.

Create Speaker Notes

Using the Notes Pane

- 1 Click to switch to Normal view.
- 2 Click a slide to which you want to add notes.

3 Click here to display the Notes pane.

Note: The Notes pane button acts as a toggle; each click displays or hides the Notes pane.

4 Click in the Notes pane and type any notes about the current slide that you want to include.

Note: You can enlarge the Notes pane. Place over the line separating the Notes pane from the slide (changes to) and drag up.

You can repeat Steps 2 to 4 for other slides to which you want to add notes.

Using the Notes Page

- 1 Click a slide to which you want to add notes.
- 2 Click the **View** tab.
- 3 Click **Notes Page**.

The Notes Page view opens and displays the selected slide.

④ Click in the bottom pane and type any notes about the current slide that you want to include.

A You can click the **Zoom** button to display the Zoom dialog box and magnify the notes.

B You can also drag the **Zoom** slider to magnify the notes.

You can edit and format your notes text using buttons on the Home tab.

TIP

How do I print my notes with my slides?

Follow these steps. Click the **File** tab, and then Click **Print**. Click to select your printer. In the Settings section, click ▾ for the second setting and click **Notes Pages (A)**. Click **Print**.

Rehearse a Slide Show

You can determine exactly how long PowerPoint displays each slide during a presentation using PowerPoint's Rehearse Timings feature. When you use Rehearse Timings, PowerPoint switches to Slide Show mode, displaying your slides in order; you control when PowerPoint advances to the next slide in the show.

When recording how long PowerPoint displays each slide, you should rehearse what you want to say during each slide as well as allow the audience time to read the entire content of each slide. After you record the timings, PowerPoint saves them for use when you present the slide show to your audience.

Rehearse a Slide Show

- 1 Click to switch to Slide Sorter view.
- 2 Click the **Slide Show** tab.
- 3 Click the **Rehearse Timings** button.

PowerPoint switches to Slide Show view and displays the first slide.

A PowerPoint displays the Record Slide Show toolbar and starts a timer.

④ Rehearse what you want to say.

B Click **II** to pause the timer. To restart the timer, click **Resume Recording** in the window that appears.

C To cancel the timer on a slide and start timing that slide again, click **5**.

⑤ When you finish timing the first slide, click **→** to proceed to the next slide.

PowerPoint displays the next slide.

⑥ Repeat Steps 4 and 5 for each slide in your presentation.

When the slide show finishes, a dialog box appears and displays the total time for the slide show.

The total time for your slide show was 0:01:14. Do you want to save the new slide timings?

7

Yes

No

7 Click Yes.

D PowerPoint saves the timings and displays them below each slide.

TIP

How do I create handouts for my audience?

Follow these steps:

- 1 Click File.
- 2 Click Print.
- 3 Select your printer.

- ④ In the Settings section, click ▾ for the second setting.
- ⑤ In the Handouts section, select a handout layout.
- ⑥ Click Print.

Run a Slide Show

You can run a presentation using PowerPoint's Slide Show view, which displays full-screen images of your slides. Slides advance in order, but you can, if necessary, view thumbnails of all of your slides so that you can display a particular slide out of order.

To enrich the experience for your audience, you can use PowerPoint's pointer options to draw directly on the screen. You can choose from several pen tools and colors. You can present your slide show using a single monitor or two monitors.

Run a Slide Show

Run a Presentation

- ① Click the **Slide Show** tab.
- ② Click **From Beginning**.

PowerPoint switches to Slide Show mode and displays the first slide.

Project Status Report

Andrew Certus
October 2, 2013

↳

A When you move the mouse pointer to the bottom-left corner, faint slide show control buttons appear.

③ Click anywhere in the slide to advance to the next slide or click the **Next** button (⇨).

B To redisplay the previous slide, you can click the **Previous** button (⇦).

Work with Thumbnails

① Click the **See All Slides** button (☷).

C PowerPoint displays thumbnails of all slides in your presentation.

② Click any slide to display it in Slide Show mode.

Point Out Slide Information

A screenshot of a slide titled 'Project Status Report' by Andrew Certus on October 2, 2013. The slide features a background of green and blue waves and three circular images: a small plant in hands, a close-up of water, and wind turbines. In the bottom left corner, a toolbar contains the following tools:

- Laser Pointer (highlighted with a red circle and labeled '2')
- Pen
- Highlighter
- Eraser
- Erase All Ink on Slide
- Color palette

Below the toolbar are five circular icons: a magnifying glass, a target, a pencil, a circle, and a square.

① Click the Pen and Laser Pointer Tools button (Ø).

② Select a tool.

D When you move the mouse pointer over the slide, the mouse appears as the tool you selected.

Note: To redisplay , repeat Steps 1 and 2, selecting the same tool.

To erase all marks, click the **Pen and Laser Pointer Tools** button () and then click **Erase All Ink on Slide**.

TIPS

Can I change the color of the ink I use for pen and laser pointer tools?

Yes. Follow the steps in the subsection “Point Out Slide Information” once to select a pointing tool and once again to select the tool’s color. The order in which you make these selections does not matter.

Can I hide a slide while I talk?

Yes. You can do this by changing the screen color to black or white. Click the **Menu** button () and point the mouse at **Screen**. Then click **Black Screen** or **White Screen**. Presenter view contains a shortcut **Black Screen** button () . To redisplay the slide, click anywhere on-screen.

You can call the audience’s attention to objects by zooming in on them. This approach can be useful if you display a slide for a lengthy time; zooming in can recapture your audience’s attention.

Many people like to work in PowerPoint’s Presenter view, which displays your notes as you present, but your audience sees only your slides. If you present on two monitors, PowerPoint automatically uses Presenter view to display notes and slides on separate monitors. Using

only one monitor, you can still set up your presentation to use Presenter view.

Run a Slide Show

Zoom an Object

- 1 Click the Zoom button (①).

A PowerPoint grays the slide background and displays a lighted square that you can use to focus on an object.

- 2 Slide ② over the object you want to enlarge and click.

B PowerPoint zooms in on the object.

To redisplay the original size of the slide, press **Esc**.

Using Presenter View

1 Click the Menu button (⊕).

② Click Show Presenter View.

PowerPoint displays your presentation in Presenter view while your audience continues to see Slide Show mode.

C The tools to control your presentation appear here.

D You can use these buttons to increase or decrease the font size of your notes.

E You can click here to display the next or previous slide.

Note: When you display your last slide, the next slide area displays “End of slide show.”

③ Press **Esc** or click here to end your slide show.

TIP

Can I display the Windows taskbar so that I can switch to another program if necessary?

Yes. When working with a single monitor, click the **Menu** button ()**,** click **Screen**, and then click **Show Taskbar (A)**. From Presenter view, you can click **Show Taskbar** at the top of the screen.

Review a Presentation

You can use comments to review a presentation and provide feedback. Comments appear in a pane along the right side of the PowerPoint window. Small balloons appear on the slide to indicate that a comment exists, and you can click a balloon to view that comment.

PowerPoint displays comment information in the Comments pane along the right side of the PowerPoint window. In the Comments pane, you can click the New button to add another comment to the same slide, and you can view the next and previous comments using the Next and Previous buttons.

Review a Presentation

Insert a Comment

- 1 Click to display the presentation in Normal view.
- 2 Click the slide on which you want to comment.

Note: To add a general comment about the slide, skip Step 3.

- ③ Click the text or object on which you want to comment.
- ④ Click the **Review** tab.
- ⑤ Click **New Comment**.

- A The Comments pane appears, containing a new comment block.
- B A comment balloon appears on the slide.
- ⑥ Type your comment here.
- ⑦ When you finish typing your comment, click outside the comment block or press **Tab**.
- C You can add another comment to the same slide by clicking the **New** button.
- D You can click **x** to close the Comments pane.

Reply to a Comment

1 Click the **Review** tab.

2 Click **Show Comments**.

The Comments pane appears.

3 Click in the **Reply** box of the comment you want to answer.

4 Type your reply.

5 Press **Tab** or click outside the Reply box.

E PowerPoint stores the reply and adds another Reply box.

F PowerPoint adds another comment balloon almost on top of the original comment balloon.

G To read the next or previous comment, click or .

TIP

How can I edit or delete a comment?

To edit a comment, click the text of the comment that you want to edit to open a text box containing the comment. Make your changes and then click outside the comment box. To delete a comment, right-click it on the slide and then click **Delete Comment**. You can also delete it from the Comments pane. Slide over the comment or reply until appears (**A**). Then, click . Deleting a comment also deletes its replies.

* Elaine Marmel 5 minutes ago

 Rich, are you sure you want to use this picture on the slide?

A

Elaine Mar... 1 minute ago

 Well, as long as you're sure, per our conversation.

Reply...

Package Your Presentation on a CD

To share your PowerPoint presentation with others, you can save it to a CD. With the Package for CD feature, PowerPoint bundles the presentation along with all of the necessary clip art, multimedia elements, and other items needed to run your show, including any linked files contained in your presentation. The CD even includes a PowerPoint Viewer with the file in case the recipient does not have PowerPoint installed on his or her computer.

If you prefer, you can save your presentation as a WMV movie file that includes any narration and timings you record.

Package Your Presentation on a CD

- 1 Click the **File** tab.

- 2 Click **Export**.
- 3 Click **Package Presentation for CD**.

4 Click Package for CD.

The Package for CD dialog box appears.

5 Type a name no longer than 16 characters for the CD.

6 Click **Copy to CD**.

Note: PowerPoint prompts you to insert a blank CD; do so and click **Retry**.

If your presentation contains linked files, PowerPoint asks you if you want to include those files on the CD.

7 If you trust the source of each linked file, click **Yes**.

PowerPoint copies the presentation files.

The size of the presentation determines how long copying takes.

When PowerPoint finishes copying the presentation, a dialog box appears.

⑧ Click **No**.

Note: If you want to continue packing additional copies of the presentation, you can click **Yes**.

⑨ Click **Close**.

The Package for CD dialog box closes.

TIP

How do I save my presentation as a video?

To save your presentation as a video, follow these steps. Click the **File** tab and then click **Export**. Click **Create a Video**. Click **▼** and choose a quality level (**A**). Click **▼** and specify whether PowerPoint should use recorded narration and timings (**B**). Click **Create Video** (**C**). In the Save As dialog box, specify the file name, type, and folder in which PowerPoint should save the video. Click the **Save** button. PowerPoint saves the presentation as a video in the folder you specified.

Create a Video

Save your presentation as a video that you can burn to a disc, upload to the web, or email

- Incorporates all recorded timings, narrations, and laser pointer gestures
 - Preserves animations, transitions, and media
- Get help burning your slide show video to DVD or uploading it to the web

The screenshot shows the 'Create a Video' dialog box. It includes the following elements:

- A dropdown menu labeled "Computer & HD Displays" with the sub-option "For viewing on a computer monitor, projector, or high definition display (Lar...)".
- A dropdown menu labeled "Don't Use Recorded Timings and Narrations" with the sub-option "No timings or narrations have been recorded".
- A text input field "Seconds spent on each slide:" with the value "05.00" and up/down arrows.
- A button labeled "Create Video" with a camera icon.

Callouts point to specific parts of the interface:

- Callout A points to the "Computer & HD Displays" dropdown.
- Callout B points to the "Don't Use Recorded Timings and Narrations" dropdown.
- Callout C points to the "Create Video" button.

Present Online

You can deliver your PowerPoint presentation online at no cost to you by taking advantage of the free Office Presentation Service that Microsoft offers.

When you present online, members of your audience view your presentation in their web browsers. They use a link that you provide to connect to your presentation. They do not need to set up anything; they need only their browser and the link you provide.

PowerPoint generates the link for you, and you can send the link via e-mail or you can paste the link at a location where members of your audience can click it.

Present Online

- 1 Open only the presentation you want to share.
- 2 Click the **File** tab.

③ Click Share.

④ Click Present Online.

A You can click here (changes to) to enable your audience to download your presentation.

⑤ Click Present Online.

The Present Online dialog box appears.

⑥ Click an invitation option:

Copy Link — with this option, you need to paste the link where others can access it; or

Send in Email — this option opens an e-mail message with the link to the presentation embedded. Fill in the recipients and send the e-mail.

⑦ When you are ready to start your presentation, click Start Presentation.

PowerPoint switches to Slide Show mode. See the section “Run a Slide Show” for details on presenting.

⑧ When your presentation concludes, press **Esc to return to Normal view in PowerPoint.**

9 Click the **Present Online** tab.

10 Click **End Online Presentation**.

PowerPoint displays a message asking you to confirm that you want to end the presentation.

11 Click **End Online Presentation**.

PowerPoint stops the presentation and the Present Online tab disappears.

TIP

What should I do if I want to send the e-mail message with the link a few days prior to the presentation?

PowerPoint's Present Online feature assumes that you will present soon after initiating the link, so you should send an e-mail announcing that you will be presenting and provide the date and time. Tell your

recipients that they will receive a link via e-mail from you approximately 30 minutes before the presentation will begin (you can choose the time, but be sure to allow enough time for the link to arrive). Then, on the day of your presentation, at the prearranged time, complete the steps in this section.

Part V: Access

Access is a robust database program that you can use to store and manage large quantities of data related to anything from a home inventory to a giant warehouse of products. Access organizes your information into tables, speeds up data entry with forms, and performs powerful analysis using filters and queries. In this part, you learn how to build and maintain a database file, add tables, create forms, and analyze your data using filters, sorting, and queries.

The screenshot shows the Microsoft Access application interface. The ribbon at the top has tabs for FILE, HOME, CREATE, EXTERNAL DATA, and DATABASE TOOLS. The HOME tab is selected, showing options for View, Clipboard, and Sort & Filter. The TABLE TOOLS tab is also selected, with sub-tabs for FIELDS and TABLE. The main area displays the 'Contacts' table in Datasheet View. The table has columns for ID, First Name, Last Name, Company, Business Address Street, Business Ad, Business Zip, and Business. There are 29 records listed, each containing a unique ID and contact information. The status bar at the bottom indicates 'Record: 14 of 29' and 'No Filter'. The bottom right corner shows keyboard shortcuts for NUM LOCK and other functions.

ID	First Name	Last Name	Company	Business Address Street	Business Ad	Business Zip	Business

Chapter 16: Database Basics

Chapter 17: Adding, Finding, and Querying Data

Chapter 16: Database Basics

Understanding Database Basics

Access is a popular database program that you can use to catalog and manage large amounts of data. You can use Access to manage anything from a simple table of data to large, multifaceted lists of information. For example, you might use Access to maintain a list of your clients or a catalog of products you sell.

If you are new to Access, you should take a moment and familiarize yourself with the basic terms associated with the program, such as *database*, *table*, *record*, *field*, *form*, *report*, and *query*. This section contains definitions of all these key terms.

Databases

Simply defined, a *database* is a collection of related information. You may not be aware, but you use databases every day. Common databases include telephone directories or television program schedules. Your own database examples might include a list of contacts that contains addresses and phone numbers. Other examples of real-world databases include product inventories, client invoices, and employee payroll lists.

Tables

ID	First Name	Last Name	State
1	Karen	Arnold	VA
2	Thomas	Barnhart	VA
3	Paul	Bonner	VA
4	Camilla	Cox	MD

The heart of any Access database is a table. A table is a list of information organized into columns and rows. In the example of a client contact database, the table might list the names, addresses, phone numbers, company names, titles, and e-mail addresses of your clients. You can have numerous tables in your Access database. For example, you might have one table listing client information and another table listing your company's products.

Records and Fields

First Name	Last Name	Company	Address	State
Donald	Wulf	Perform Tech	99 New York Avenue	VA

Every entry that you make in an Access table is called a *record*. Records always appear as rows in a database table. Every record consists of *fields*, which are the separate pieces of information that make up each record. Each field of a record appears in a separate column. For example, in a client contact list, each record (row) might include fields (columns) for first name, last name, company name, title, address, city, ZIP code, phone number, and e-mail address. Field names appear at the top of each column.

Forms

General

First Name	Karen
Last Name	Arnold
Company	UNITECH Consulting
Job Title	

You can enter your database records directly into an Access table or you can simplify the process by using a *form*. Access forms present your table fields in an easy-to-read, fill-in-the-blank format. Forms allow you to enter records one at a time. Forms are a great way to ensure consistent data entry, particularly if other users are adding information to your database list.

Reports and Queries

CONTACTS

Karen Arnold

Thomas Barnhart

Alexandria, VA 22311

Phone

(703) 671-6600

Management Partners Inc.

8522 Montegue St.

You can use the report feature to summarize data in your tables and generate printouts of pertinent information, such as your top ten salespeople and your top-selling products. You can use queries to sort and filter your data. For example, you can choose to view only a few of your table fields and filter them to match certain criteria.

Plan a Database

Tables I need:

Contacts

Fields I need in the Contacts table:

Name

State

Phone

Reports I need:

Report that lists all fields

Report that lists just name and phone

Forms I need:

Contact list that shows all information for all entries

Contact details that lists all information for one entry

The first step to building an Access database is deciding what sort of data you want it to contain. What sorts of actions do you want to perform on your data? How do you want to organize it? How many tables of data do you need? What types of fields do you need for your records? What sort of reports and queries do you hope to create? Consider sketching out on paper how you want to group the information into tables and how the tables will relate to each other. Planning your database in advance can save you time when you build the database file.

Create a Database Based on a Template

You can build web apps — a new kind of database designed with Access and published online — or desktop databases based on any of the predefined Access templates. For example, you can create databases to track contact lists, assets, and task management. You can also search [Office.com](#) to find new, featured templates. This book focuses on building desktop databases.

When you create a new database using a template, the database includes pre-built tables and forms, which you populate with your own data. You control the structure of your database by modifying or eliminating preset tables and fields and adding database content such as tables, forms, and reports.

Create a Database Based on a Template

- 1 Start Access.

Note: You can also create a new database from within Access; click the File tab and then click New.

A On the Access start screen or the New screen, templates appear.

B You can search for additional templates online at Office.com by typing keywords here.

② Click a template.

Note: To build a database, select a template that contains “Desktop” as the first word in its name. Web app template names do not contain the word “Desktop.”

A window appears, displaying the template information.

C To view the next or previous template, click these buttons.

- ③** Type a new name in the **File Name** field.
- ④** To change the folder in which you store the database file, click the **Open** button (📁).

Note: If you are satisfied with the folder Access suggests, skip to Step 7. The File New Database dialog box appears.

5 Locate and select the folder in which you want to store the database file.

6 Click OK.

7 Click Create.

The screenshot shows the Microsoft Access 'Contact Management Database' window. On the left, the 'All Access Objects' navigation pane is visible, with a green circle labeled 'D' pointing to the 'Contact List' item under 'Tables'. The main area displays the 'Contact List' form, which includes fields for 'First Name', 'Last Name', 'Company', 'Job Title', 'Category', 'E-mail Address', and 'Business Phone'. At the top of the form, there is a yellow bar with a 'SECURITY WARNING' message: 'Some active content has been disabled. Click for more details.' A red circle with the number 8 points to a 'Enable Content' link in this bar. The ribbon at the top of the window shows tabs for FILE, HOME, CREATE, EXTERNAL DATA, and DATABASE TOOLS.

D Access downloads the template and creates a new, blank database, ready for data.

Note: The Getting Started window for the Contacts Management Database appears. You can watch videos associated with the database or you can click  to close the window.

8 A security warning appears; to hide the warning and enable the macros in this template, click **Enable Content**.

TIP

How do I know what fields to keep in or remove from my table?

To determine the fields you need in your database, decide the kinds of information you want to track in your database and the types of reports and queries you want to generate to view your data. For best results, use the suggested fields; you can always remove or hide fields that you do not use at a later time. (For help removing or hiding fields from a table, see the sections “Delete a Field from a Table” and “Hide a Field in a Table” later in this chapter.)

Create a Blank Database

Access includes many predefined database templates, including templates for creating contact lists, assets, project management, task management, and more. You can also log onto the [Office.com](#) site to find additional downloadable templates.

If you determine that none of these predesigned Access templates suits your purposes, you can create a new, blank database and then decide on the tables, fields, forms, and other objects your database will include.

Create a Blank Database

- ① Start Access.

Note: You can also create a new database from within Access; click the File tab and then click **New**.

- A On the Access start screen or the New screen, templates appear.

- ② Click **Blank desktop database**.

A window appears, displaying the template information.

B To view the next or previous template, click these buttons.

- ③ Type a new name in the **File Name** field.
- ④ To change the folder in which you store the database file, click the **Open** button (📁).

Note: If you are satisfied with the folder Access suggests, skip to Step 7. The File New Database dialog box appears.

5 Locate and select the folder in which you want to store the database file.

6 Click OK.

7 Click Create.

A screenshot of the Microsoft Access application showing the 'Table Tools Fields' ribbon tab selected. A green circle labeled 'C' highlights the 'Add & Delete' button in the ribbon. The 'ID' field is selected in the table design grid, indicated by a red border and the text '(New)'.

C Access creates a new, blank database and opens a new table, ready for data.

TIPS

What is the pane on the left?

This is the Navigation pane, which you can use to open various database objects. Click the **Shutter Bar Open/Close** button («) to collapse the pane; click the button again (») to expand the pane.

How do I open an existing database?

Click the **File** tab, click **Open**, click **Recent**, and then click the database in the Recent Databases list that appears. If the database does not appear in the Recent Databases list, click **Open Other Files**, click **Computer** or your SkyDrive, and then click **Browse** to display an Open dialog box. Locate and select the database file, and click **Open**.

Create a New Table

Access databases store all data in tables. A *table* is a list of information organized into columns and rows that hold data. A table might list the names, addresses, phone numbers, company names, titles, and e-mail addresses of your clients. Each row in a table is considered a *record*. You can use columns to hold *fields*, which are the individual units of information contained within a record.

If you need to add a table to a database, you can easily do so. All table objects that you create appear listed in the Navigation pane; simply double-click a table object to open it.

Create a New Table

- ① With your database open in Access, click the **Create** tab.
- ② Click the **Table** button.

A Access creates a new table and displays it in Datasheet view.

Note: See the next section, “Change Table Views,” to learn more about Datasheet view.

③ To name a field, click the **Click to Add** link at the top of the field column.

④ Click the type of field you want to add.

In this example a Short Text field is added.

- 5 Type a name for the field and press **Enter**.
- 6 Repeat Steps 4 to 5 to create more fields for the table.
- 7 When you are finished adding fields, close the table by clicking the **Close** button (x).

Access prompts you to save the table changes.

- 8 Click **Yes**.

The Save As dialog box appears.

- 9 Type a name for the table.
- 10 Click **OK**.

Access lists the table among the database objects in the Navigation pane.

Note: After you save a table, you can reopen it by double-clicking it in the Navigation pane.

TIPS

Can I rename table fields?

Yes. You can rename fields in any table. To do so, double-click the field label and type a new name. When you finish, press **Enter**.

How do I remove a table that I no longer want?

Before attempting to remove a table, ensure that it does not contain any important data that you need. To delete the table, select it in the Navigation pane and press **Delete**. Access asks you to confirm the deletion before permanently removing the table, along with any data that it contains.

Change Table Views

You can view your table data using two different view modes: Datasheet view and Design view. In Datasheet view, the table appears as an ordinary grid of intersecting columns and rows where you can enter data. In Design view, you can view the skeletal structure of your fields and their properties and modify the design of the table.

In either view, you can add fields by typing new field names in the Field Name column, or change the field names. In Design view, you can also change the type of data allowed within a field, such as text or number data.

Change Table Views

Switch to Design View

- 1 Open any table by double-clicking it in the Navigation pane.

A Access displays the table in the default Datasheet view.

2 Click the **Home** tab.

3 Click the bottom half of the **View** button.

4 Click **Design View**.

Note: You can quickly toggle between Datasheet view and Design view by clicking the top half of the **View** button.

B Access displays the table in Design view.

C The bottom of the view displays the properties of the field you select in the top of the view.

D Access displays the Table Tools Design tab.

Switch to Datasheet View

- 1 Click the **Home** tab.
- 2 Click the bottom half of the **View** button.
- 3 Click **Datasheet View**.

Note: You can quickly switch from Design view to Datasheet view by clicking the top half of the **View** button.

The screenshot shows the Microsoft Access application window. The ribbon at the top has 'FILE', 'HOME', 'CREATE', 'EXTERNAL DATA', 'DATABASE TOOLS', 'FIELDS', and 'TABLE'. The 'HOME' tab is selected. The left pane is the 'Navigation pane' with sections like 'Tables', 'Queries', 'Forms', 'Reports', 'Macros', and 'Modules'. Under 'Tables', 'Contacts' is selected and highlighted in pink. A green callout bubble with the letter 'E' points to this selection. The main area is a 'Datasheet View' of the 'Contacts' table. The table has columns: 'ID', 'First Name', 'Last Name', 'Company', 'Business Address', and 'City'. There are 31 records listed. Another green callout bubble with the letter 'E' points to the 'Datasheet View' icon in the bottom-left corner of the main window.

E Access displays the default Datasheet view of the table.

TIPS

Do all Access objects have the same views?

No. All Access objects have a Design view, but other available views depend on the object you select in the Navigation pane. For example, in addition to a Design view, reports have a Report view, a Print Preview, and a Layout view, and forms have a Form view and a Layout view.

What is the purpose of the Field Properties area in Design view?

The Field Properties area enables you to change the design of the field, specifying how many characters the field can contain, whether fields can be left blank, and other properties.

Add a Field to a Table

You can add fields to your table to include more information in your records. For example, you may need to add a separate field to a Contacts table for mobile phone numbers. Alternatively, you may need to add a field to a table that contains a catalog of products to track each product's availability.

After you add a field, you can name it whatever you want. To name a field, double-click the field label in Datasheet view, type a new name, and press the Enter key. Alternatively, you can change the field name in Design view.

Add a Field to a Table

- ① Double-click to open the table to which you want to add a field in Datasheet view.
- ② Click the column heading to the left of where you want to insert a new field.

Note: Access adds the column for the new field to the right of the column you select.

③ Click the **Fields** tab.

④ In the Add & Delete group, click the button for the type of field you want to add.

In this example, a Short Text field is added.

The screenshot shows the Microsoft Access ribbon with the 'FIELDS' tab selected. In the 'Add & Delete' group, there is a large green circle around the 'A' icon, which stands for 'Text'. Below the ribbon is a table named 'Contacts' with columns: ID, First Name, Last Name, Company, and Business Address. The 'Last Name' column is currently highlighted. The status bar at the bottom indicates 'Record 1 of 41'.

ID	First Name	Last Name	Company	Business Address
1	Karen	Gold	Dynatech Consulting	1870 Tasker Parkway

A Access adds the new field.

Note: You can rename the field by typing a new name and pressing **Enter**.

Delete a Field from a Table

You can delete a field that you no longer need in a table. For example, if your employee contact information database contains a Pager Number field, you might opt to delete that field.

When you remove a field, Access permanently removes any data contained within the field for every record in the table. If you do not want to delete the information in the field, you might choose to hide the field. For information, see the next section, “Hide a Field in a Table.”

Delete a Field from a Table

- ➊ Double-click to open the table that you want to edit in Datasheet view.
 - ➋ Click the column header for the field you want to remove.
 - ➌ Click the Fields tab.
- A Access selects the entire column.

4 Click the **Delete** button.

B Access prompts you to confirm the deletion.

5 Click **Yes**.

Note: You might also see a message warning you that deleting the field will also delete an index; click **Yes**.

The screenshot shows the Microsoft Access interface with the 'Contact Management Database' open. The 'Tables' section of the navigation pane shows 'All Access Objects' expanded, with 'Contacts' selected. The main area displays the 'Contacts' table in Datasheet View. The table has columns: ID, First Name, Last Name, Company, Business Address, and Busin. The first few rows of data are as follows:

ID	First Name	Last Name	Company	Business Address	Busin
1	Karen	Arnold	Dynatech Consulting	1870 Tasker Parkway	Centrevill
2	Thomas	Barnhart	Management Partners Inc.	8522 Montague St.	Alexandr
3	Paul	Bonner	ILM International, Inc.	2267 Lehigh Highway	Fairfax
4	Camilla	Cox	AeroTrain, Inc.	359 Canada Drive	Landover
5	Barbara	Dugan	HummRRO	66 Canal Center Plaza, Suite Alexander	
6	Lydia	Evans	SRA International, Inc.	2901 Clanendon Blvd., Suite McLean	
7	Joseph	Gilmer	Techniques.org	3680 Hoyt Court	Wheat Ri

C Access removes the field and any record content for the field from the table.

Hide a Field in a Table

Suppose your table contains fields that you do not want to view on a regular basis, but that you do not want to delete from the table. For example, a table containing a catalog of products might include a field indicating the country in which the product was manufactured — information that you might not need to view on a regular basis but still need occasionally. You also might hide a field to prevent another user on your computer from seeing the field. Whatever the reason, you can hide the field. When you are ready to view the field again, you can easily unhide it.

Hide a Field in a Table

- 1 Double-click the table that you want to edit to open it in Datasheet view.
- 2 Right-click the column heading of the field you want to hide.
- 3 Click **Hide Fields**.

The screenshot shows the Microsoft Access ribbon with 'FILE' selected. In the left pane, under 'Tables', 'Contacts' is highlighted. The main area displays a table with the following data:

Business City	Business Sta.	Business Zip	Mobile Phon
Centreville	VA	20161	(703) 655-1212
Alexandria	VA	22313	(703) 671-6600
Fairfax	VA	22303	(703) 934-3815
Landover	MD	20785	(301) 731-0900
Alexandria	VA	22314	(703) 706-5681
McLean	VA	22102	(610) 628-7810
Wheat Ridge	CO	80063	(720) 530-3275
Sterling	VA	20164	(703) 779-1429
Arlington	VA	22209	(703) 485-7400
Reston	VA	20190	
Falls Church	VA	22042	(703) 564-7096
Alexandria	VA	22314	(703) 540-0330
Chantilly	VA	20151	(703) 810-4829
College Park	MD	20740	(301) 277-0255
Falls Church	VA	22041	(703) 683-4735
Vienna	VA	22121	(703) 748-2790
Annandale	VA	22009	(703) 813-0659
McLean	VA	22101	(703) 893-5305
Fairfax	VA	22031	(703) 289-6841
Alexandria	VA	22314	(703) 799-3652
Reston	VA	20190	(703) 287-9100
Fairfax Station	VA	22039	(703) 662-4829
Reston	VA	20190	(703) 885-6035
McLean	VA	22102	
Rockville	MD	20850	(301) 940-1922
McLean	VA	22101	(703) 970-3562
Fairfax	VA	22030	(703) 256-4796

A Access hides the field.

Note: To view the field again, right-click any column heading and click **Unhide Fields**. In the Unhide Columns dialog box that appears, select the column that you want to display again (changes to) , and click **Close**. Access displays the hidden field as the last column in the table.

Move a Field in a Table

You can change the order of fields in a table. Moving fields is particularly useful if you built your database from a predesigned template, because you may want to reorder fields to suit the way you enter data for each record.

Moving a field changes its position in Datasheet view but does not change the order of the fields in the table design. If you create a form after reordering fields, the form fields appear in their original position.

Move a Field in a Table

- ➊ Double-click the table that you want to edit to open it in Datasheet view.
- ➋ Click the column heading of the field you want to move.
- A Access selects the entire column.
- ➌ Drag the column to a new position in the table (▶ changes to ▷).

B A bold vertical line marks the new location of the column as you drag.

4 Release the mouse button.

The screenshot shows the Microsoft Access ribbon with 'FILE', 'HOME', 'CREATE', 'EXTERNAL DATA', 'DATABASE TOOLS', 'FIELDS', and 'TABLE'. The 'FIELDS' tab is selected. In the 'Tables' section of the left pane, 'Contacts' is highlighted. The 'Design View' window displays the 'Contacts' table with columns: ID, Last Name, First Name, Company, Business Address, and Busin. A green arrow labeled 'C' points to the 'Last Name' column header. The 'Last Name' column is currently being moved, as indicated by a yellow vertical bar on its left and a red 'X' icon in the top-left corner of its cell.

ID	Last Name	First Name	Company	Business Address	Busin
1	Arnold	Karen	Dynabach Consulting	1870 Tasker Parkway	Centrevill
2	Barnhart	Thomas	Management Partners Inc.	8522 Montague St.	Alexandr
3	Bonner	Paul	IUM International, Inc.	2267 Lehigh Highway	Fairfax
4	Cox	Camilla	AeroTrain, Inc.	359 Canada Drive	Lanover
5	Dugan	Barbara	HummPRO	66 Canal Center Plaza, Suite	Alexandr

C Access moves the field to the new location.

Create a Form

Although you can enter data into your database by typing it directly into an Access table, you can simplify data entry, especially if someone else will be entering the data, by creating a form based on your table. Forms present your table fields in an easy-to-read, fill-in-the-blank format. When you create a form based on a table, Access inserts fields into the form for each field in the table.

Forms, which enable you to enter records one at a time, are a great way to help ensure accurate data entry, particularly if other users are adding information to your database.

Create a Form

- ➊ Double-click the table that you want to edit to open it in Datasheet view.
- ➋ Click the **Create** tab.
- ➌ Click the **Form** button.

A Access creates the form.

4 Click the Close button (x) to close the form.

Access prompts you to save your changes.

5 Click Yes.

The Save As dialog box appears.

6 Type a name for the form.

7 Click OK.

Access lists the form among the database objects in the Navigation pane.

Note: After you save a form, you can reopen it by double-clicking it in the Navigation pane.

TIPS

How do I delete a form that I no longer need?

To delete a form, click it in the Navigation pane, and then press **Delete** or click the **Delete** button on the Home tab. Access asks you to confirm the deletion; click **Yes**.

Can I create a blank form?

Yes. Click the **Blank Form** button on the Create tab to open a blank

form. A field list appears, containing all the fields from all of the tables in the database. To add a field to the form, drag it from the list onto the form. You can populate the form with as many fields as you need.

Change Form Views

You can view your form using three form views: Form view, Design view, and Layout view. Form view is the default; in this view, you can simply enter data. In Design view, each form object appears as a separate, editable element. For example, in Design view, you can edit both the box that contains the data and the label that identifies the data. In Layout view, you can rearrange the form controls and adjust their sizes directly on the form. Access makes it easy to switch from Form view to Design view to Layout view and back.

Change Form Views

Switch to Design View

- ① Double-click the form that you want to edit to open it in Form view.
- ② Click the **Home** tab.
- ③ Click the bottom half of the **View** button.
- ④ Click **Design View**.

A Access displays the form in Design view.

Switch to Layout View

1 Click the **Home** tab.

2 Click the bottom half of the **View** button.

3 Click **Layout View**.

B Access displays the form in Layout view.

To return to Form view, you can click the bottom half of the **View** button and then click **Form View**.

Move a Field in a Form

You can move a field to another location on your form. For example, you might move a field to accommodate the order in which data is entered in the form. When you click a field label to select it, Access selects only the field label. Because you will probably want to move both the field label and the field contents, you can more easily move both of them if you select both at the same time.

Although you can move a field in either Design view or Layout view, you might find it easier to make changes to your form in Layout view.

Move a Field in a Form

- ➊ Double-click the form that you want to edit to open it in Form view.
- ➋ Switch to Layout view (see the previous section, “Change Form Views,” for details).
- ➌ Click the label of the field that you want to move (changes to).
- ➍ Press and hold as you click the contents of the field.

5 Click and drag the field label and contents to the new location on the form.

A This symbol identifies the proposed position of the field label and contents.

B When you release the mouse button, Access repositions the field.

You can click anywhere outside the field label and contents to deselect them.

Delete a Field in a Form

You can delete a field that you no longer need in a form. When you remove a field, you need to remove both the data box and the field label. Although you can delete a field in Design view or in Layout view, you might find it easier to do this in Layout view.

Note that removing a form field does not remove the field from the table upon which the form is originally based or any of the data within that field; it simply removes the field from the form.

Delete a Field in a Form

- ➊ Double-click the form that you want to edit to open it in Form view.
- ➋ Switch to Layout view (see the section “Change Form Views” for details).
- ➌ Click the label of the field that you want to delete (changes to).
- ➍ Press and hold **Ctrl** as you click the contents of the field.

5 Press **Delete**, or click the **Home** tab and then click the **Delete** button.

A Access removes the field and label from the form.

Apply a Database Theme

A *theme* is a predesigned set of color schemes, fonts, and other visual attributes. Applying a theme to an Access database is a quick way to make it more visually appealing. When you apply a theme to an Access database, that same theme is applied to all forms and tables in your database.

Themes are shared among the Office programs; you can use the same theme in your Access database that you have applied to worksheets in Excel, documents in Word, or slides in PowerPoint.

Apply a Database Theme

- ➊ Double-click the form that you want to edit to open it in Form view.
- ➋ Switch to Layout view (see the section “Change Form Views” for details).
- ➌ Click the **Design** tab.
- ➍ Click the **Themes** button.

5 Click the theme you want to apply.

A Access applies the theme to all forms in the database, changing colors and fonts.

Format Form Fields

To change the look of a form, you can apply formatting to fields in the form. You might format a form field to draw attention to it in order to make it easier to locate that field for data-entry purposes. Or, you might opt to change the font of all field labels, make them larger, and change their color, to make them stand out on the form for those who enter data.

You can apply the same types of formatting to form fields that you apply to words in Word documents, PowerPoint presentations, Publisher publications, Outlook messages, and Excel cells.

Format Form Fields

- ➊ Double-click the form that you want to edit to open it in Form view.
 - ➋ Switch to Layout view (see “Change Form Views” for details).
 - ➌ Click to select the field whose text you want to format.
- A** To select multiple fields, you can press and hold **Ctrl** as you click

additional fields.

④ Click the **Format** tab.

⑤ Use these tools to format the fields:

Click the **Font** ▾ and choose a font.

Click the **Font Size** ▾ and choose a font size.

Click ▾ to the right of the **Font Color** button (red) and choose a color.

Click ▾ to the right of the **Background Color** button (blue) and choose a color.

B Access formats the text in the selected fields.

You can click anywhere outside the selected fields to deselect them.

Add a Background Image

You can add a background image to a form to make it more pleasant to view. For example, you could add a company logo or a photograph that appears in your company's marketing materials. A background image, while not necessary or essential to a form, can make data entry a bit more interesting, simply because the form looks less form-like. And, when data entry is less boring and more interesting, the person entering the data is less likely to make mistakes. A background image on a form remains fixed, even as you change records.

Add a Background Image

- ① Double-click the form that you want to edit to open it in Form view.
- ② Switch to Layout view (see the section “Change Form Views” for details).
- ③ Click the **Format** tab.
- ④ Click the **Background Image** button.

5 Click Browse.

The Insert Picture dialog box opens.

6 Locate and select the image you want to use.

7 Click OK.

A Access adds the image to the form background.

Chapter 17: Adding, Finding, and Querying Data

Add a Record to a Table

You build a database by adding records to a table in the database. Any new records that you add appear at the end of the table. You add records to a table in Datasheet view. As your table grows longer, you can use the navigation buttons on your keyboard to navigate it. You can press **Tab** to move from cell to cell, or you can press the keyboard arrow keys. To move backward to a previous cell, press **Shift + Backspace**.

After you enter a record in a database table, you can edit it in a table in Datasheet view.

Add a Record to a Table

- 1 In the Navigation pane, double-click the table to which you want to add a record.

A Access opens the table, placing the cell pointer in the first cell of the first row.

B By default, the first field in each table is a unique ID number for the record. Access sets this value automatically as you create a record.

2 Click in the second cell of the first empty row.

3 Type the desired data in the selected cell.

4 Press **Tab**.

Access fills in the ID number to add the new record.

5 Repeat Steps **3** and **4** until you have filled the entire row.

6 Press **Enter** or press **Tab** to move to the next row or record.

C The new record appears here.

D Access moves the cell pointer to the first cell in the next row.

This screenshot shows the Microsoft Access application interface after multiple records have been added. The 'Tables' section on the left still shows 'Contacts' is selected. The main area displays the 'Contacts' table with 31 records. The last record added is highlighted with a green circle labeled 'E' over the 'Last Name' field containing 'Westburg'. The green circle labeled 'F' points to the 'Next Record' button in the ribbon's 'Records' group. The status bar at the bottom shows 'Record: 4 1 of 31'.

ID	Last Name	First Name	Company	Business Address	Business City	Business ZIP	Birth Date
1	Arnold	Karen	Dynatech Consulting	1870 Tasker Parkway	Centreville	VA	1965-07-15

22	Suryawanshi	Cassandra	IBM	9721 South Park Circle Fairfax Station	Fairfax Station	VA	1964-07-01
23	Thomas	Janet	Deloitte Consulting, Inc.	12010 Sunset Hills, Suite 50 Reston	Reston	VA	1965-06-01
24	Todd	Conrad	Bain & Company	8232 Greensboro Drive McLean	McLean	VA	1964-08-01
25	Wagner	Allysa	The Center for Organizational Change	15204 Omega Drive, Suite 3 Rockville	Rockville	MD	1966-04-01
26	Waite	James	Windwalker Corporation	1355 Beverly Road, Suite 300 McLean	McLean	VA	1963-07-01
27	Westburg	Barry	Performance Technologies	11350 Random Hills Road, S Fairfax	Fairfax	VA	1964-05-01

7 Repeat Steps 3 to 6 to add more records to the table.

Access adds your records.

E You can resize a column by dragging the column border left or right.

F You can use the scroll bars to view different parts of the table.

TIP

What is a primary key?

A *primary key* uniquely identifies each record in a table. For many tables, the primary key is the ID field by default. The ID field, which Access creates automatically, stores a unique number for each record as it is entered into the database. If you want, however, you can designate another field (or even multiple fields) as a primary key. To do so, switch the table to Design view, select the field that you want to set as the primary key, and click the **Primary key** button on the Design tab.

Add a Record to a Form

You can use forms to quickly add records to your Access databases. Forms present your record fields in an easy-to-read format. When you use a form to add records, the form presents each field in your table as a labeled box that you can use to enter data.

After you enter a record in a form, you can edit it if necessary. (See the tip for more information.) For help locating a particular record in the form window in order to edit it, see the next section, “Navigate Records in a Form.”

Add a Record to a Form

- ➊ In the Navigation pane, double-click the form to which you want to add a record.
 - ➋ Click the **Home** tab.
- A Access opens the form.

3 Click the New button in the Records group.

B Access displays a blank form, placing the insertion point in the first field.

C By default, the first field in the table associated with this form is a unique ID number for the record. Access sets this value automatically.

4 Press **Tab**.

Access moves the insertion point to the next field in the form.

- 5 Type the desired data in the selected field.

- 6 Repeat Steps 4 and 5 until you have filled the entire form.
7 Click Save or press **Enter** and press **Tab**.

Access saves the record and displays another blank form, ready for data.

D To close the form window, you can click the **Close** button (✖).

TIPS

Are there other ways to insert a new record?

Yes. You can click the **New (Blank) Record** button (✚) on the form window's navigation bar, located along the bottom of the form.

How do I edit a record in a form?

You can reopen the form, navigate to the record that you want to change, and make your edits directly to the form data. When you save your changes, Access automatically updates the data in your table. To learn how to display a particular record in a form, see the next section, “Navigate Records in a Form.”

Navigate Records in a Form

You may find it easier to read a record using a form instead of reading it from a large table containing other records. Similarly, editing a record in a form may be easier than editing a record in a table. You can locate records you want to view or edit using the navigation bar that appears along the bottom of the form window. This navigation bar contains buttons for locating and viewing different records in your database. The navigation bar also contains a Search field for locating a specific record. (You learn how to search for a record in a form in the next section.)

Navigate Records in a Form

- ① In the Navigation pane, double-click the form whose records you want to navigate.

A Access displays the form.

B The Current Record box indicates which record you are viewing.

2 Click the **Previous Record** () button or **Next Record** () button to move back or forward by one record.

C Access displays the previous or next record in the database.

D You can click the **First Record** () button or **Last Record** () button to navigate to the first or last record in the table.

E You can click the **New (Blank) Record** button () to start a new, blank record.

Search for a Record in a Form

You may find it easier to read and edit records in a form than in a large table containing other records. As described in the previous section, you can locate records you want to view or edit by using the various buttons in the navigation bar, such as the Previous Record button, the Next Record button, and so on. However, that method can become time-consuming if the table associated with the form contains many records. This section describes how to search for the record — an easier approach to finding a record while using a form. You search using the form's navigation bar.

Search for a Record in a Form

- ➊ In the Navigation pane, double-click the form containing the record you want to find.
- ➋ Access displays the form.
- ➌ Click in the Search box.

- ❸ Type a keyword that relates to the record you want to find.
In this example, a search for a person's last name is performed.
- B** As you type, Access displays the first matching record.
- ❹ After you finish typing your keyword, press **Enter** to display the next matching record, if any.

Delete a Record from a Table

You can remove a record from your database if it holds data that you no longer need. Removing old records can reduce the overall file size of your database and make it easier to manage. When you delete a record, all of the data within its fields is permanently removed.

You can remove a record from a database by deleting it from a table or by deleting it from a form. This section shows you how to delete a record from a table. (For help deleting a record from a form, see the next section, “Delete a Record from a Form.”)

Delete a Record from a Table

- 1 In the Navigation pane, double-click the table that contains the record you want to delete.

A Access opens the table.

- 2 Position your mouse pointer over the gray box to the left of the record

that you want to delete (▷ changes to ➔) and click.

B Access selects the record.

3 Click the **Home** tab.

4 Click **Delete**.

Note: You can also right-click the record, and then click **Delete Record**.

Access asks you to confirm the deletion.

5 Click **Yes**.

C Access permanently removes the row containing the record from the table.

Delete a Record from a Form

In addition to removing records directly from a table, as described in the previous section, you can remove records that you no longer need by using a form. Removing old records can reduce the overall file size of your database and make it easier to manage. When you delete a record, whether from a table or a form, Access permanently removes all the data within its fields.

The first step is to locate the record you want to delete; refer to the sections “Navigate Records in a Form” and “Search for a Record in a Form” for help locating the record.

Delete a Record from a Form

- ① In the Navigation pane, double-click the form containing the record you want to delete.
- A Access displays the form.

- ② Navigate to the record you want to delete.
- ③ Click the **Home** tab.
- ④ Click **⋮** beside the **Delete** button.
- ⑤ Click **Delete Record**.

Access asks you to confirm the deletion.

- ⑥ Click **Yes**.

Access permanently removes the record.

Sort Records

Sorting enables you to arrange your database records in a logical order to match any criteria that you specify. By default, Access sorts records in ID order. However, you may want to sort the records alphabetically or based on the ZIP code. You can sort in ascending order or descending order.

You can sort records in a table, or you can use a form to sort records. Sorting records in a table has no effect on the order in which records appear in an associated form; similarly, sorting in a form has no effect on the records in an associated table.

Sort Records

Sort a Table

The screenshot shows the Microsoft Access interface with the 'Contacts' table open in Datasheet View. A yellow vertical bar highlights the column headers. Numbered callouts point to specific elements:

- ① In the Navigation pane, double-click the table you want to sort.
- ② Position your mouse pointer over the column heading for the field by which you want to sort (\triangleright changes to \downarrow) and click to select the column.
- ③ On the ribbon, click the HOME tab.
- ④ Click the Sort Ascending button in the Sort & Filter group.

ID	Last Name	First Name	Company	Business Ad	ZIP	Business Sta	Business	
1	Arnold	Karen	Dynatech Cons	1870 Trap Rd	Arlington	22201	VA	(703)

27	Westburg	Barry	Performance T	11350 Random Fairfax	22030	VA	(703)	

- ① In the Navigation pane, double-click the table you want to sort.
- ② Position your mouse pointer over the column heading for the field by which you want to sort (\triangleright changes to \downarrow) and click to select the column.

3 Click the **Home** tab.

4 Click a sort button:

Click **Ascending** to sort the records in ascending order.

Click **Descending** to sort the records in descending order.

Access sorts the table records based on the field you choose.

A In this example, Access sorts the records alphabetically by company name in ascending order.

5 Click to close the table.

B In the prompt box that appears, you can click **Yes** to make the sort permanent or **No** to leave the original order intact.

Sort Using a Form

- ➊ In the Navigation pane, double-click the form you want to use to sort records.
- ➋ Click in the field by which you want to sort.
- ➌ Click the **Home** tab.
- ➍ Click a sort button:

Click **Ascending** to sort the records in ascending order.

Click **Descending** to sort the records in descending order.

Access sorts the table records based on the field you chose.

C In this example, Access sorts the records alphabetically by company name in ascending order.

D You can use the navigation buttons to view the sorted records.

TIPS

How are empty records sorted?

If you sort using a field for which some records are missing data, those records are included in the sort; they appear first in an ascending sort, or last in a descending sort.

How do I remove a sort order?

With the sorted table or form open, click the **Remove Sort** button in the Sort & Filter group on the Home tab. This returns the table to its original sort order. You can also use this technique to remove a sort from a query or report. (Queries and reports are covered later in this

chapter.)

Filter Records

You can use an Access filter to view only specific records that meet criteria you set. For example, you may want to view all clients buying a particular product, anyone in a contacts database who has a birthday in June, or all products within a particular category. You can also filter by exclusion — that is, filter out records that do not contain the search criteria that you specify.

You can apply a simple filter on one field in your database using the Selection tool, or you can filter several fields using the Filter by Form command.

Filter Records

Apply a Simple Filter

- ① In the Navigation pane, double-click the form you want to use to filter records.
- ② Click in the field by which you want to filter.

- 3** Click the **Home** tab.
- 4** Click the **Selection** button.
- 5** Click a criterion.

- A** Access filters the records.
- B** In this example, Access finds three records matching the filter criterion.
- C** You can use the navigation buttons to view the filtered records.
- D** To remove the filter, you can click the **Toggle Filter** button.

Filter by Form

- 1 In the Navigation pane, double-click the form you want to use to sort records.
- 2 Click the **Home** tab.
- 3 Click the **Advanced** button.
- 4 Click **Filter By Form**.

E A blank form appears.

- 5** Click in the field by which you want to filter.
- 6** Click the  that appears and choose a criterion.
- 7** Repeat Steps **5** and **6** to add more criteria to the filter.

F You can set OR criteria using the tab at the bottom of the form.

- 8** Click the **Toggle Filter** button to filter the records.

To remove the filter, you can click the **Toggle Filter** button again. Then, click the **Advanced** button and click **Clear All Filters**.

TIPS

How do I filter by exclusion?

Click in the field that you want to filter in the form, click the **Selection** button on the Home tab, and then click an exclusion option.

What are OR criteria?

Setting OR criteria enables you to display records that match one set of criteria or another. For example, you might set up your filter to display only those records with the value 46989 OR 46555 in the ZIP field. After you set a criterion, Access adds an OR tab. If you set an OR criterion using that tab, Access adds another OR tab, and so on.

Apply Conditional Formatting

You can use Access's Conditional Formatting tool to apply certain formatting attributes, such as bold text or a fill color, to data in a form when the data meets a specified condition. For example, if your database tracks weekly sales, you might set up the Conditional Formatting feature to alert you if sales figures fall below what is required for you to break even.

You apply conditional formatting by creating a rule that specifies the criteria that the value in a field must meet. Access formats values that meet the criteria using settings you specify.

Apply Conditional Formatting

- ① In the Navigation pane, double-click the form to which you want to apply conditional formatting.
- ② Switch to Layout view.

Note: For details on switching form views, see Chapter 16.

- ③ Click the field to which you want to apply conditional formatting.
- ④ Click the **Format** tab.
- ⑤ Click the **Conditional Formatting** button.

The Conditional Formatting Rules Manager dialog box opens.

- ⑥ Click the **New Rule** button.

The New Formatting Rule dialog box opens.

- ⑦ Set the criteria you want to use to apply conditional formatting.
- ⑧ Specify how values that meet your criteria should be formatted.
- ⑨ Click **OK**.

A Access creates a rule based on the criteria you set.

10 Click OK.

B Access applies the conditional formatting.

TIP

How do I remove conditional formatting?

To remove conditional formatting complete Steps 1 to 5 in this section to open the Conditional Formatting Rules Manager dialog box. Click the conditional formatting rule you want to remove (A), and click the **Delete Rule** button (B). Click **OK**. Access removes the conditional formatting.

Perform a Simple Query

You can use a query to extract information that you want to view in a database. Queries are similar to filters but offer you greater control. You can use the Query Wizard to help you select the fields you want to include in the analysis. There are several types of Query Wizards. This section covers using the Simple Query Wizard.

Although beyond the scope of this book, queries also can help you collect information from multiple tables that you can then use to perform a mail merge; see *Teach Yourself VISUALLY Access 2013* for details on using Access data with Word's mail merge feature.

Perform a Simple Query

Create a Query

The screenshot shows the Microsoft Access interface. The ribbon is visible at the top with the 'CREATE' tab selected (indicated by a red circle with '2'). In the 'Tables' section of the navigation pane (indicated by a red circle with '1'), the 'Contacts' table is selected. On the far left of the ribbon, the 'Form Wizard' icon is highlighted (indicated by a red circle with '3'). The main area displays the 'Contacts' table data in Datasheet View, showing columns for ID, Last Name, First Name, Company, Business Ad, ZIP, Business Sta, and Business P.

ID	Last Name	First Name	Company	Business Ad	ZIP	Business Sta	Business P
1	Arnold	Karen	Dynatech Cons	1879 Tasker Pa Centreville	22181	VA	(703) 655-1
2	Barnhart	Thomas	Management F	8522 Montague Alexandria	22311	VA	(703) 671-6

27	Westburg	Barry	Performance T	11350 Random Fairfax	22030	VA	(703) 256-4

- ➊ In the Navigation pane, double-click the table for which you want to create a simple query.
- ➋ Click the **Create** tab.

3 Click the **Query Wizard** button.

The New Query dialog box appears.

4 Click **Simple Query Wizard**.

5 Click **OK**.

The Simple Query Wizard opens.

6 Click the **Tables/Queries** and choose the table containing the fields on which you want to base the query.

7 In the Available Fields list, click a field that you want to include in the query.

8 Click the **Add** button ().

A The field appears in the Selected Fields list.

9 Repeat Steps 7 and 8 to add more fields to your query.

You can repeat Step 6 to choose another table from which to add fields.

Note: When using fields from two or more tables, the tables must have a relationship.

10 Click **Next**.

TIP

What is a table relationship?

A table relationship enables you to combine related information for analysis. For example, you might define a relationship between one table containing customer contact information and another table containing customer orders. With that table relationship defined, you can then perform a query to, for example, identify the addresses of all customers who have ordered the same product. To access tools for defining table relationships, click the **Database Tools** tab on the Ribbon and then click **Relationships**. If you created your database from a template, then certain table relationships are predefined.

During the process of creating a new query, the Query Wizard asks you to give the query a unique name so that you can open and use the query later. All queries that you create appear in the Navigation pane; you can double-click a query in the Navigation pane to perform it again.

If, after creating and performing a query, you determine that you need to add more criteria to it, you can easily do so. For example, you may realize that the query needs to include an additional table from your database or additional criteria to expand or limit the scope of the query.

Perform a Simple Query

- ⑪ Type a name for the query.
- ⑫ Select **Open the query to view information** (changes to).
- ⑬ Click **Finish**.

A A query datasheet appears, listing the fields.

B The query appears in the Navigation pane.

Add Criteria to the Query

- ① If necessary, double-click the query in the Navigation pane that you want to modify to open it.
- ② Click the **Home** tab.
- ③ Click the bottom half of the **View** button.
- ④ Click **Design View**.

C Access displays the Query Tools Design tab.

- 5 Click in the **Criteria** box for the field you want to use as a criterion and type the data that you want to view.

This example specifies a ZIP code as the criterion.

- 6 Click the bottom half of the **View** button.

- 7 Click **Datasheet View**.

A screenshot of the Microsoft Access application interface. The ribbon at the top has tabs for FILE, HOME, CREATE, EXTERNAL DATA, and DATABASE TOOLS. The HOME tab is selected. On the left, the navigation pane shows 'All Access' with a green circle containing a white letter 'D' over the 'Tables' section. Below it are 'Queries' (highlighted in red), 'Forms', and 'Reports'. The main area displays a query results grid titled 'Contacts Query'. The first column is 'Last Name' and the second is 'Zip'. The data shows three rows: 'House' with Zip 26190, 'Strachan' with Zip 26190, and 'Thomas' with Zip 26190. At the bottom of the grid, the status bar shows 'Record: 1 of 3' and 'No Filter'. The bottom right corner of the window shows the Windows taskbar with icons for File Explorer, Edge, and File Explorer.

D The table now shows only the records matching the criteria.

TIPS

How do I add another table to my query?

Switch to Design view, click the **Design** tab on the Ribbon, and then click the **Show Table** button to open the Show Table dialog box, where you can add another table to the query.

What kinds of queries do the other wizards in the New Query dialog box create?

The Crosstab Query Wizard's query displays information in a spreadsheet-like format, the Find Duplicates Query Wizard's query finds records with duplicate field values, and the Find Unmatched Query Wizard's query finds records in one table with no related records in another table.

Create a Report

You can use Access to create a report based on one or more database tables. You can create a simple report, which contains all the fields in a single table, or a custom report, which can contain data from multiple tables. To use fields from two or more tables, the tables must have a relationship. See the tip “What is a table relationship?” in the previous section for more information.

To create a custom report, you can use the Report Wizard; it guides you through all the steps necessary to turn complex database data into an easy-to-read report.

Create a Report

Create a Simple Report

- ① In the Navigation pane, double-click the table for which you want to create a simple report.
- ② Click the **Create** tab.

3 Click the Report button.

A Access creates a simple report based on the table you selected.

4 Click **x** to close the report.

Access prompts you to save the report.

5 Click **Yes**.

6 In the dialog box that appears, supply a report name and click **OK**.

B The report appears in the Navigation pane.

Create a Custom Report

- ➊ In the Navigation pane, double-click the table for which you want to create a simple report.
- ➋ Click the **Create** tab.
- ➌ Click the **Report Wizard** button.

The Report Wizard opens.

- ➍ Click the **Tables/Queries** ▾ and choose the table containing the fields on which you want to base the report.
- ➎ In the Available Fields list, click a field that you want to include in the report.
- ➏ Click the **Add** button (➤).
- ➐ The field appears in the Selected Fields list.
- ➑ Repeat Steps ⑮ and ⑯ to add more fields to your report.
- ➒ Click **Next**.

- ⑨ Optionally, click the field you want to use to group the data.
- ⑩ Click the **Add** button ($>$).
- D A preview of the grouping appears here.
- ⑪ Click **Next**.

TIPS

How do I choose fields from different tables in a custom report?

Repeat Step 3 in the subsection “Create a Custom Report” for each additional table that contains fields you want to include.

How do I remove a field from a custom report?

If you have not yet completed the wizard, you can remove a field from the report by clicking the **Back** button until you reach the wizard’s first screen. Then click the field you want to remove in the **Selected Fields** list and click the **Remove** button (\square) to remove the field. To remove all the fields, click the **Remove All** button ($\square\square$).

As you walk through the steps for building a report, the Report Wizard asks you to specify a sort order. You can sort records by up to four

fields, in ascending or descending order. The wizard also prompts you to select a layout for the report. Options include Stepped, Block, and Outline, in either portrait or landscape mode.

Note that you can change other design aspects of the report by opening it in Design view. And, after you create the report, you can print it. For more information, see the tips at the end of this section.

Create a Report

- ⑫ To sort your data, click the first and click the field by which you want to sort.

You can add more sort fields as needed.

Note: Fields are sorted in ascending order by default. Click the **Ascending** button to toggle to descending order.

- ⑬ Click **Next**.

⑯ Select a layout option (changes to).

A You can set the page orientation for a report here (changes to).

⑰ Click **Next**.

⑯ Type a name for the report.

⑰ Select **Preview the report** (changes to).

⑱ Click **Finish**.

B Access creates and displays the report.

C The report appears in the Navigation pane.

TIPS

How do I print a report?

To print a report from Print Preview view, click the **Print Preview** tab and click the **Print** button. Alternatively, click the **File** button and click **Print** to open the Print dialog box, where you can select various printing options.

How can I customize a report in Access?

You can customize a report using Design view. You can change the formatting of fields, move fields around, and more. You can even apply conditional formatting to the report by clicking the **Conditional Formatting** button on the Format tab. For more about conditional

formatting, refer to the section “Apply Conditional Formatting” earlier in this chapter.

Part VI: Outlook

Outlook is an e-mail program and a personal information manager for the computer desktop. You can use Outlook to send and receive e-mail messages, schedule calendar appointments, keep track of contacts, organize lists of things to do, and more. In this part, you learn how to put Outlook to work for you using each of its major components to manage everyday tasks.

Chapter 19: E-Mailing with Outlook

Chapter 18: Organizing with Outlook

Navigate in Outlook

Outlook functions as a personal organizer, with Mail, Calendar, People, Tasks, and Notes components. You switch between these components using the Navigation bar.

Mail appears by default when you open Outlook and enables you to send and receive e-mail messages. Calendar enables you to keep track of appointments. People enables you to maintain a database of your contacts and include those contacts in e-mail messages you send and appointments you schedule. Tasks enables you to keep a to-do list.

Navigate in Outlook

Note: When Outlook opens, the Mail component appears by default. You can read more about using the Mail component in Chapter 19.

① Click **Calendar** on the Navigation bar.

Outlook displays the Calendar component.

- 2 Click **People** on the Navigation bar.
Outlook displays the People component.

The screenshot shows the Microsoft Outlook interface with the 'People' tab selected in the ribbon. The main area displays a list of contacts under 'My Contacts'. One contact, 'Diane Koers', is selected and shown in detail on the right side of the screen. A red callout bubble with the number '3' points to the 'Tasks' tab in the navigation bar at the bottom.

- 3 Click **Tasks** on the Navigation bar.

Outlook displays the Tasks component.

TIP

How do I change which component opens by default when I start Outlook?

To start with a different Mail folder or another component, such as Calendar, perform the steps that follow. Click the **File** tab, and click **Options** to display the Outlook Options dialog box. Click **Advanced**. In the Outlook Start and Exit section, click the **Browse** button to display the Select Folder dialog box. Click the component or Mail folder that you want to set as the default component (**A**). Click **OK** twice to close both dialog boxes.

Schedule an Appointment

You can use Outlook's Calendar component to keep track of your schedule. When adding new appointments to the Calendar, you fill out appointment details, such as the name of the person with whom you are meeting, the location and date of the appointment, and the start and end times of the appointment. You can also enter notes about the appointment, as well as set up Outlook to remind you of the appointment in advance. If your appointment occurs regularly, such as a weekly department meeting, you can set it as a recurring appointment. Outlook adds recurring appointments to each day, week, or month as you require.

Schedule an Appointment

- 1 Click **Calendar** on the Navigation bar.
 - 2 Click the date for which you want to set an appointment.
- A You can click here to navigate to a different month.

B You can click here to select a different calendar view, such as a daily or weekly view.

3 Click the **New Appointment** button to display the Appointment window.

4 Type a name for the appointment; Outlook adds the name to the window's title.

C You can type the appointment location here.

5 Click the **Start time** ▾ and set a start time.

Note: By default, Outlook allots 30 minutes for an appointment.

D You can click the **End time** ▾ and change the end time.

E Outlook automatically sets a reminder. You can click ▾ to change the reminder setting.

F You can type notes about the appointment here.

6 If your appointment occurs regularly, click the **Recurrence** button. Otherwise, skip to Step **9**.

The Appointment Recurrence dialog box appears.

7 Select the recurrence pattern.

G In the Range of Recurrence section, you can limit the appointments if they continue only for a specified time.

8 Click **OK**.

H Outlook marks the appointment as a recurring appointment.

⑨ Click the **Save & Close** button.

Outlook displays the appointment in the Calendar. To view the appointment details or make changes, double-click the appointment. To delete an appointment, right-click it and click **Delete**.

TIPS

Can I schedule an all-day event?

Yes. In the Appointment window, select **All day event** (changes to) beside the Start Time boxes.

Why do certain dates on the navigation calendars appear in bold?

Dates that appear in bold indicate that you have appointments scheduled on those days.

Create a New Contact

You can use Outlook's People component to maintain a list of contact information. You can track information such as your contacts' home and business addresses; e-mail addresses; instant message address; company information; home, work, fax, and mobile phone numbers; and social media updates. You can also enter notes about a contact.

By default, Outlook displays contact information using the People view, where you can edit contact information. You can also switch to other views such as the Business Card or List view.

Create a New Contact

Create a Contact

- 1 Click **People** on the Navigation bar.
 - 2 Click the **New Contact** button.
- Outlook opens a Contact window.

3 Fill in the contact's information.

You can press **Tab** to move from field to field.

A You can click **Show** and then click **Details** to fill in additional information about the contact.

4 Click the **Save & Close** button.

B Outlook saves the information and displays the contact in the People view.

C You can click to see available views and switch to one.

Work with the People Card

① Click a contact.

D You can click here and type a part of the contact's name.

E Information about the contact appears here.

F You can click these links to set up an appointment or meeting with the contact or send an e-mail to the contact.

G You can click this link to reopen the window shown in the subsection “Create a Contact” to edit the contact’s information.

② To edit using the People card, click here.

Outlook displays People card fields in an editable format.

③ Make any changes.

H You can click \oplus to add information.

④ Click Save.

TIP

Is there an easy way to set up an appointment or e-mail one of my contacts if I am using Business Card view?

Yes. Right-click the contact and click **Create**. Click **Email** or **Meeting** (A). If you click **Email**, Outlook opens a Message window containing the contact's e-mail address in the To field; see Chapter 19 for details on completing the message. If you click **Meeting**, a Meeting window appears, where you can enter appointment details and e-mail a meeting request to the contact.

Create a New Task

You can use Outlook's Tasks component to keep track of things that you need to do; for example, you can create tasks for a daily list of activities or project steps that you need to complete. You can assign a due date to each task, prioritize and categorize tasks, and set a reminder date and time. You can set up a recurring task and even assign tasks to other people.

When you finish a task, you can mark it as complete. Depending on the current view, completed tasks may appear with a strikethrough on the Tasks list or they may not appear at all.

Create a New Task

- ① Click **Tasks** in the Navigation bar to open the Tasks component.
 - ② Click the **New Task** button.
- Outlook displays a Task window.

③ Type a subject for the task.

A You can click to enter a due date.

B You can type notes or details about the task here.

C You can set a priority for the task using the Priority ▾.

D You can select Reminder (changes to) and then set a reminder date and time.

④ If your task occurs regularly, click here; otherwise, skip to Step 7. The Task Recurrence dialog box appears.

5 Select the recurrence pattern.

E In the Range of Recurrence section, you can limit the tasks if they continue only for a specified time.

6 Click **OK**.

7 Click the **Save & Close** button.

F Outlook displays the task in the list.

G Details of the selected task appear here.

To edit a task, you can double-click the task to reopen the Task window.

H This indicator (🔔) represents a reminder.

I This indicator (🕒) represents a recurring task.

J You can click a task and mark it complete by clicking the **Mark Complete** button.

K You can click the **Change View** button and choose a different view of tasks.

TIP

What happens if I click Tasks on the left side of the Tasks component?

When you click **Tasks**, you see an alternative view of your tasks. From the To-Do List view (shown throughout this section), you see only outstanding tasks you have not yet completed. From the Tasks view, you see all your tasks; the ones you have completed (**A**) appear with a strikethrough line and a check mark to indicate they are complete.

Add a Note

Outlook includes a Notes component, which you can use to create notes for yourself. Much like an electronic version of yellow sticky notes, Outlook's Notes component enables you to quickly and easily jot down your ideas and thoughts. You can attach Outlook Notes to other items in Outlook, as well as drag them from the Outlook window onto the Windows desktop for easy viewing.

Add a Note

- ① Click here to display a pop-up menu.
 - ② Click **Note** to open the Notes component.
 - ③ Click the **New Note** button.
 - ④ Type your note text.
 - ⑤ Close the note card.
- A** Notes appear in Icon view.

5 When you finish, click the note's **Close** button (X).

C Outlook adds the note to the Notes list.

To view the note again or to make changes, you can double-click it.

D To change your view of notes in the Notes list, you can click an option in the Current View group.

This example displays the Notes List view.

TIP

How do I delete a note that I no longer want?

Click the note in the Notes list and then press **Delete**. To delete multiple notes at the same time, press and hold **Ctrl** while clicking the notes. Once you delete a note, Outlook places it in the Deleted Items folder. If you accidentally delete a note, you can click the **Undo** button () immediately after you delete the note. If you discover later that you need the note, follow these steps:

- 1 Click here.
- 2 Click **Folders**.
- 3 Click **Deleted Items**.

④ Find the note and drag it to the Notes folder.

Customize the Navigation Bar

You can control the appearance of the Navigation bar, displaying fewer items or more items to suit your needs. For example, suppose that you use the Notes component regularly. You can save mouse clicks if you display the Notes component as part of the Navigation bar.

In addition to determining which components appear on the Navigation bar, you can control the order in which they appear. You can also control the size of the Navigation bar by choosing to display buttons that represent each component instead of displaying the component name.

Customize the Navigation Bar

- 1 From any Outlook component, click here.

A A pop-up menu appears.

② Click **Navigation Options**.

The Navigation Options dialog box appears.

③ Click to specify the number of items you want visible on the Navigation bar.

④ To reorder the Navigation bar entries, click an item and then click the **Move Up** or **Move Down** button.

B You can click **Reset** if you want to return the Navigation bar to its original state.

5 Click OK.

C The Navigation bar appears with your changes.

TIP

How can I reduce the size of the Navigation bar?

Perform Steps 1 and 2 to display the Navigation Options dialog box. Then, select **Compact Navigation** (changes to). Click **OK**, and your Navigation bar appears more compact because buttons represent the components. You might need to widen the left pane in Outlook to see all the Navigation buttons. Slide the mouse pointer over the pane divider (changes to) and drag the pane divider to the right.

Peek at Appointments and Tasks

From any Outlook component, you can take a peek at today's appointments and at your task list. You do not need to select Calendar or Tasks to view appointments or tasks.

The Calendar peek view displays the current month, and today's appointments appear below the monthly calendar. The Task peek view displays upcoming tasks not only for today but also for the week, for next week, and for next month. In the Task peek window, you can scroll through tasks and create a new task. You can also pin a peek view to any component so that it remains visible.

Peek at Appointments and Tasks

- To peek at your appointments, slide the mouse pointer over **Calendar** on the Navigation bar.

A Outlook enables you to “peek” at your calendar.

B Point your mouse at any day to view that day’s appointments here.

2 To peek at your tasks, slide the mouse pointer over Tasks.

C Outlook displays a list of your tasks.

D You can click and to scroll through your task list.

E You can click here and type a name for a new task.

Note: When you press **Enter** to add the task, Outlook adds the task to your list as a task for today. See the section “Create a New Task” for details on editing the task.

3 To pin a peek view so that it is permanently visible, click the docking button ().

F Outlook pins the tasks or appointments to the right side of the current component's window.

Note: The pinned peek view appears only in the component you were viewing when you pinned it.

TIP

Can I unpin a peek view?

Yes. Click  in the upper-right corner of the pinned view (A) and Outlook hides the view.

Search for Outlook Items

Suppose you need to locate an Outlook item, such as an e-mail message about a project you are working on, an item on your to-do list that you need to review, or the contact record for a co-worker that you need to call. Instead of sifting through your Outlook folders to locate it, you can use Outlook's Search tool to quickly find it. Each component includes a Search box; you simply enter a keyword or phrase, and Outlook searches for a match, even displaying items that match your criteria as you type.

Search for Outlook Items

Perform a Basic Search

- ① Click the Outlook component you want to search.

Note: This example uses the Tasks component.

- ② Click in the **Search** box.

- A** Outlook displays a Search tab, with several search-specific tools.
- B** You can click All Outlook Items to search all Outlook folders instead of just the current component's folder.
- C** These tools change, depending on the component you selected in Step 1.

3 Type your keyword or phrase.

D As you type, Outlook displays items that match your entry.

You can double-click an item to view it in its own window.

Using Advanced Search Criteria

- 1** Click in any component's search box.
- 2** On the Search tab, click **Search Tools**.
- 3** Click **Advanced Find**.

E In the Advanced Find window that appears, specify your search criteria at the top of the window and on the Any Items tab. More options appear on the More Choices tab and the Advanced tab.

- 4** Click **Find Now** to search.

F Results appear in the bottom of the window.

- 5** Click  to close the window when you finish.

TIP

Can I control search options?

Yes. Perform Steps **1** and **2** in the subsection “Using Advanced Search Criteria.” Then click **Search Options** to display the search options available in the Outlook Options dialog box. You can, for example, improve search speed by limiting the number of results Outlook displays, and you can control the color Outlook uses to highlight terms that match your search criteria. Make any necessary changes and click **OK**.

Work with the To-Do Bar

Outlook's To-Do Bar can display a monthly calendar and appointments, your favorite contacts, or your tasks. You can choose to show all or any combination of these elements. The To-Do Bar appears along the right side of the Outlook window.

To-Do Bar elements can appear in any Outlook component. Note that displaying To-Do Bar elements in one Outlook component does not display them in any other Outlook component. You can, however, display To-Do Bar elements individually in each Outlook component.

Work with the To-Do Bar

- 1 On the Navigation bar, click the Outlook component in which you want to display To-Do Bar elements.
- 2 Click the **View** tab.
- 3 Click **To-Do Bar**.
- 4 Click the To-Do Bar element you want to display.

In this example, Outlook displays the calendar.

A The To-Do Bar appears along the right side of the Outlook window, displaying the element you selected in Step 4.

- 5** Repeat Steps 3 and 4 to display another To-Do Bar element.
- 6** Repeat Steps 1 to 5 to display To-Do Bar elements in another Outlook Component.

B To hide an individual To-Do Bar element, click **x** for the element.

Note: To hide the entire To-Do Bar in a particular Outlook component, repeat Steps 2 and 3 and then click **Off**.

Link Contacts

You can link two contacts so that, in the People view of your contacts, you can see all information for the linked contacts on one card.

For example, suppose that you set up two cards for one contact because you want to be able to easily e-mail that person at two different e-mail addresses. If you link the two cards, you can still e-mail to whichever address you want, but you have the added benefit of viewing all of the person's contact information on one card in the People view. You can unlink the contacts at any time.

Link Contacts

- ① Click **People** on the Navigation bar.
- ② Click **People**.
- ③ Click a contact you want to link.
- ④ Click here.

5 Click **Link Contacts**.

6 In the Linked Contacts dialog box, type another contact's name.

7 Click the search result you want to link.

A Outlook moves the contact you selected in Step **7** above the search box.

8 Click **OK**.

Outlook links the contacts.

9 Click either contact card.

B Outlook displays all contact information for the contact on both contact cards.

C To unlink the contacts, click here and then click **Link Contacts** to redisplay the Linked Contacts dialog box; click the Contact you want to unlink and click **OK**.

Chapter 19: E-Mailing with Outlook

Compose and Send a Message

You can use Outlook to compose and send e-mail messages. When you compose a message in Outlook, you designate the e-mail address of the message recipient (or recipients) and type your message text. You can also give the message a subject title to identify the content of the message for recipients.

You can compose a message offline, but you must be working online to send it. If you do not have time to finish composing your message during your current work session, you can save the message as a draft and come back at a later time to finish it.

Compose and Send a Message

- 1 On the Navigation bar, click **Mail** to display the Mail component.
- 2 Click the **Home** tab.
- 3 Click the **New Email** button.

Outlook opens an untitled message window.

④ Type the recipient's e-mail address.

A If the e-mail address is already in your Address Book, you can click the **To** button and select the recipient's name.

If you enter more than one e-mail address, you must separate each address with a semicolon (;) and a space.

⑤ Type a subject title for the message.

❶ Type the message text.

❷ You can use the formatting buttons to change the appearance of your message text.

❸ To set a priority level for the message, you can click **High Importance** or **Low Importance**.

Note: By default, the message priority level is Normal.

❹ Click **Send**.

Outlook places the message in your Outbox.

Note: You might need to press **F9** or click the **Send/Receive** tab and click **Send All** or **Send/Receive All Folders** to send the message.

8 Click the **Sent Items** folder.

D The message you sent appears in the Item list; Outlook stores a copy of all messages you send in the Sent Items folder.

TIPS

How do I save a message as a draft?

Click the message window's **x** and click **Yes** when prompted to save the message. Outlook saves the message in the Drafts folder. When you are ready to continue composing your message, click the **Drafts** folder and double-click the saved message to open it.

How do I send a copy of my message to someone?

To copy or blind copy the message to another recipient, either type the recipient's e-mail address directly in the field or click the **Cc** or **Bcc** button to select the address from your contacts.

Send a File Attachment

You can send files stored on your computer to other e-mail recipients. For example, you might send an Excel worksheet or Word document to a work colleague or send a digital photo of your child's birthday to a relative. Assuming that the recipient's computer has the necessary software installed, that person can open and view the file on his or her own system.

Note that some e-mail systems are not set up to handle large file attachments. If you are sending a large attachment, check with the recipient to see if his or her system can handle it.

Send a File Attachment

- 1 Create a new e-mail message, entering the recipient's e-mail address, a subject title, and the message text.

Note: Refer to the previous section, "Compose and Send a Message," for help creating a new e-mail message.

2 Click the **Message** tab.

3 Click the **Attach File** button.

The Insert File dialog box appears.

4 Locate and select the file you want to send.

5 Click **Insert**.

A Outlook adds the file attachment to the message, displaying the filename and file size.

6 Click **Send**.

Outlook sends the e-mail message and attachment.

Read an Incoming Message

You can use Outlook's Mail feature to retrieve new e-mail messages that others have sent you and view them on-screen. You can view a message in a separate message window or in the Reading pane, as described in this section. By default, the Reading pane appears beside the list of messages, but you can place it below the message list.

Note that you must be connected to the Internet to receive e-mail messages.

Read an Incoming Message

- 1 Click **Mail**.
- 2 Click the **Home** tab.
- 3 Click the **Send/Receive All Folders** button.

Outlook retrieves new e-mail messages.

- 4 If the **Inbox** is not selected, click the **Inbox** folder.

A Messages appear in the Message list pane, with a preview.

B You can filter the list to show all or only unread messages.

C Messages you have not opened display a vertical bar.

5 Click a message.

D The contents of the message appear in the Reading pane.

Note: You can double-click a message to open it in a message window.

E Messages containing attachments display a paper clip; double-click it to open the attachment. A warning dialog box appears; click **Open** to view or click **Save** to save the attachment. Never open a file unless you trust the sender.

Reply To or Forward a Message

You can reply to an e-mail message by sending a return message to the original sender. For example, if you receive an e-mail message containing a question, you can reply to that e-mail with your answer. When you reply to an e-mail, the original sender's name is added to the To field in the message.

You can also forward the message to another recipient. For example, you might forward a message that you receive from one co-worker to another co-worker who will find its contents useful.

Note that you must be connected to the Internet in order to send replies or forward e-mail messages.

Reply To or Forward a Message

Reply To a Message

- 1 In the Message list pane, click the message to which you want to

reply.

② In the Reading pane, click **Reply** to reply to the original sender.

A To reply to the sender as well as to everyone else who received the original message, you can click **Reply All**.

B The original sender's address appears in the To field.

C You can click **Pop Out** to open your reply in its own message window.

③ Type your reply.

D If you change your mind and do not want to reply to the message, you can click **Discard**.

④ Click **Send**.

E Outlook places the e-mail message in the Outbox.

F Outlook sends the message at its next automatically scheduled send/receive action; to send the message, click the **Send/Receive All Folders** button on the Home tab.

Forward a Message

- ① In the Message list pane, click the message to which you want to reply.
- ② In the Reading pane, click **Forward**.

- ③ Type the recipient's e-mail address in the **To** field.
- G** You can click **Pop Out** to open your message in its own window.
- ④ Perform Steps 3 and 4 in the previous subsection, “Reply To a Message.”

TIP

How do I look up an e-mail address when forwarding a message?

Perform Steps 1 and 2 in the subsection “Forward a Message.” Click the **To** button to display a list of your contacts. Type a few letters to identify the contact. Outlook highlights the first contact that matches what you typed. If necessary, use the arrow keys to highlight the correct contact. Press **Enter** to display the contact in the **To** field. Click **OK** and Outlook places the contact name in the **To** field of your message.

Add a Sender to Your Outlook Contacts

Suppose you receive an e-mail message from someone with whom you expect to correspond regularly, but you do not have a record for that individual in Outlook contacts. You can easily add the contact information of the sender of any message you receive to your Outlook contacts, directly from the message. If, at a later time, you want to send a new message to that person, you can click the To button and choose his or her name from the Select Names: Contacts dialog box, as shown in the tip in the previous section, “Reply To or Forward a Message.”

Add a Sender to Your Outlook Contacts

- ① In the Message list pane, click the message from the sender you want to add as a contact.
- ② In the Reading pane, right-click the sender's name.
- ③ Click Add to Outlook Contacts.

A A window opens with the sender's e-mail address already filled in.

4 Type a name for the contact.

B You can click any to add additional information.

5 Click **Save**.

Outlook saves the contact information.

Delete a Message

As you receive e-mail messages, you can eliminate clutter if you delete messages you no longer need from your Inbox and other Outlook folders.

Note that when you delete a message from your Inbox or any other Outlook folder, Outlook does not remove it from your system. Rather, it moves it to the Deleted Items folder. To permanently remove deleted messages from your system, thereby maximizing your computer's storage capacity, you should empty the Deleted Items folder on a regular basis.

Delete a Message

- ① In the Message list pane, click the message you want to delete.
- ② Make sure the mouse pointer remains over the message you clicked in Step 1.
× appears.

3 Press **Delete**, or click **x** in the Message list pane, or click **Delete** on the Home tab.

Outlook deletes the message from the Inbox and the Message list pane and adds it to the Deleted Items folder.

A You can click the **Deleted Items** folder to view the message that you deleted.

B To empty the Deleted Items folder, right-click it and click **Empty Folder**.

Work with Conversations

You can view your e-mail messages as conversations in Outlook. In Conversation view, Outlook groups related messages that are part of the same conversation, or *thread*, in the Message list pane.

Using Conversation view, all related messages, including messages that you have sent as replies or forwarded to others, appear under a single heading — typically the subject of the message. You expand a thread to view its related messages. By default, Outlook displays all messages in the Message list pane of the Inbox in Conversation view.

Work with Conversations

View a Conversation

- 1 In the Message list pane, click a conversation entry.

Note: You can identify a conversation because ▶ appears on the left side of the entry. If your messages do not appear as conversations, click the

View tab and then select **Show as Conversations** (changes to).

A The number of messages in the conversation appears here.

② Click  to expand the conversation.

B Outlook expands the conversation, displaying all the related messages ( changes to ).

C Outlook displays the conversation using the subject as a heading.

③ Click  to close the conversation ( changes to ).

Outlook closes the conversation, displaying a single entry for the conversation as it appeared before you opened the conversation.

Clean Up a Conversation

① Perform Steps 1 and 2 in the previous subsection, “View a Conversation.”

- ② Click a message in the conversation you want to clean up.
 - ③ Click the **Home** tab.
 - ④ Click the **Clean Up** button in the Delete group.
 - ⑤ Click **Clean Up Conversation**.
- The Clean Up Conversation dialog box opens.
- ⑥ Click **Clean Up**.

D Outlook removes redundant messages from the conversation.

E Outlook places the removed messages in the Deleted Items folder.

Note: To permanently remove the messages, right-click the Deleted Items folder and click **Empty Folder**.

TIP

Is there a way to ignore conversations where I am included but they are not relevant to me?

Yes. Perform Steps 1 and 2 in the subsection “View a Conversation.” Click the **Home** tab, and then click the **Ignore** button. In the message box that appears, click **OK**. Outlook removes the conversation and places it in the Deleted Items folder. If you realize you have ignored a conversation in error, you can stop ignoring it. Click the **Deleted Items** folder, repeat Steps 1 to 3 in this tip, and then click **Stop Ignoring Conversation**.

Screen Junk E-Mail

Junk e-mail, also called *spam*, is overly abundant on the Internet and often finds its way into your Inbox. You can safeguard against wasting time viewing unsolicited messages by setting up Outlook's Junk E-mail feature. This feature enables you to make sure that Outlook bypasses e-mail from specific web domains and instead deposits those messages into the Outlook Junk E-mail folder.

Outlook might erroneously place e-mail that is *not* spam in the Junk E-mail folder. Periodically scan the contents of this folder to ensure that it does not contain any messages you want to read.

Screen Junk E-Mail

View Junk E-Mail Options

- 1 Click the **Home** tab.
- 2 Click the **Junk**.
- 3 Click **Junk E-mail Options...**.

③ Click Junk E-mail Options.

The Junk E-mail Options dialog box appears.

A You can use the various tabs to view junk e-mail settings, blocked domains, and safe senders.

B You can click one of these options to control the level of junk e-mail filtering that Outlook applies.

④ Click OK.

Designate a Message as Junk

- 1 Click the message in the Message list pane.
- 2 Click the **Home** tab.
- 3 Click the **Junk ▾**.
- 4 Click **Block Sender**.

A prompt box appears.

5 Click **OK**.

C Outlook adds the sender's e-mail address to the list of filtered addresses and moves the message to the Junk E-mail folder.

TIPS

How can I restore a junk e-mail to my safe list?

Right-click the message in the Junk E-mail folder and, from the menu that appears, point at **Junk** and click **Not Junk**. Outlook alerts you that it will move the message back to its original location and gives you the option of removing the sender from the filter list; click **OK**.

Does Outlook empty the Junk E-mail folder?

No. To empty the folder, right-click it and click the **Empty Folder** button. Outlook permanently removes all items in the Junk E-mail folder.

Create a Message Rule

You can use rules to determine what Outlook does when you receive a message that meets a specific set of conditions. For example, you might create a rule that ensures that any message from a certain sender is placed directly into a folder of your choosing as soon as Outlook downloads the message. Alternatively, you might set up Outlook to play a certain sound when you receive a message that meets the criteria you set.

You can set rules that are quite simple, as outlined in this section, or rules that are very complex — involving various criteria, exceptions to the rule, and so on.

Create a Message Rule

- ① Click the message on which you want to base a rule.
- ② Click the **Home** tab.
- ③ Click the **Rules** ▾.

4 Click Create Rule.

The Create Rule dialog box appears.

5 Select the conditions that you want to apply (changes to).

6 Specify the actions to take when the conditions are met. In this example, select the **Move the item to folder** check box (changes to).

7 Click the **Select Folder** button.

The Rules and Alerts dialog box appears.

8 Click the folder where you want Outlook to move the messages.

9 Click **OK**.

10 Click **OK**.

Outlook prompts you to run the rule now.

11 Select the check box (changes to).

12 Click **OK**.

A Outlook runs the rule; in this example, Outlook moves any existing messages to the folder you specified.

The next time you receive a message matching the criteria you set, Outlook runs the rule.

TIPS

How do I add more criteria to a message rule?

Perform Steps 1 to 4. Then, click the **Advanced Options** button to display the Rules Wizard, which includes several sets of criteria that you can specify, such as exceptions to the rule, actions, and even a dialog box for naming the rule.

How do I remove a rule?

Click the **Home** tab, click the **Rules ▾**, and then click **Manage Rules & Alerts**. In the dialog box that appears, click the rule you want to delete and click the **Delete** button.

Part VII: Publisher

Publisher is a desktop publishing program that you can use to design and produce a variety of publications. Publisher installs with a large selection of predesigned publications that you can use as templates to build your own desktop publishing projects; additional templates are available from [Office.com](#). In this part, you learn how to build and fine-tune publications, tapping into Publisher's formatting features to make each document suit your own design and needs.

[Chapter 20: Publisher Basics](#)

[Chapter 21: Fine-Tuning a Publication](#)

Chapter 20: Publisher Basics

Create a Publication

You can use Publisher to create all kinds of publications, such as brochures, flyers, newsletters, and letterhead stationery. Publisher installs with a wide variety of publication design templates, and you can search for templates at [Office.com](https://www.office.com).

If none of Publisher's predesigned publication templates suits your needs, you can create a blank publication, populate it with your own text boxes, and design your own layout. For example, you might want to create your own brochure or invitation and customize it.

Create a Publication

① Open Publisher.

The Publisher Start screen appears.

Note: If Publisher is already open, click the **File** tab and then click **New**.

Publisher

Recent

- Dog Agility.pub
My Documents > Publisher Stuff
- Background fill.pub
My Documents > Publisher Stuff
- Create building block.pub
My Documents > Publisher Stuff
- dog sitter.pub
My Documents > Publisher Stuff
- Building block.pub
My Documents > Publisher Stuff
- Newsletter template.pub
My Documents > Publisher Stuff
- Link text boxes.pub
My Documents > Publisher Stuff
- Test Pub.pub
My Documents > Publisher Stuff
- Animal Family Photo Album.p...
My Documents > Publisher Stuff

Open Other Publications

- 2 Use and to scroll through the available publication templates.
- 3 Click a publication design to preview it.

- A Publisher displays a preview of the selected design template.
- B A description of the template appears here.

C You can click these buttons to view more images of the template.

D You can click these buttons to preview the next or previous template design.

④ Click **Create.**

Publisher creates the publication.

E Thumbnail images of each page of the publication appear here.

TIP

How can I search for additional templates?

Follow these steps:

1 In the search box at the top of the Publisher Start screen or the New screen, type a keyword that describes the type of publication template you want to find.

Note: Click **File** and then click **New** to display the New screen.

2 Click .

A You can now filter the search results by clicking a category. Each category you click reduces the search results further.

B If nothing appeals to you, click **Home** and then click a blank template.

Zoom In and Out

You can use Publisher's Zoom feature to control the on-screen magnification of your publication. By default, Publisher displays your document in a zoomed-out view so that you can see all the elements on a page. When you begin adding text and formatting, you can zoom in to better see what you are doing.

There are a few ways to zoom in and out of your publication. One is to use the Zoom settings on the View tab. Another is to use the Zoom buttons. A third is to use your keyboard.

Zoom In and Out

Specify a Magnification

① Click the area of the publication where you want to change the zoom magnification.

A When you click an object on the page, Publisher surrounds it with selection handles (▫ and □).

② Click the **View** tab.

③ Click the **Zoom** ▾.

④ Click a percentage.

B You can also type a value in the **Zoom** field.

C Publisher changes the magnification setting for your publication.

Using Zoom Buttons

- 1 Click the area of the publication where you want to change the magnification.

D Publisher surrounds the area with selection handles (▫ and ▬).

2 Click a magnification button to zoom in or out.

You can click the Zoom buttons multiple times to change the level of magnification.

E You can also click and drag the slider to change the level of magnification.

F Publisher changes the magnification setting for your publication.

G You can see the current magnification level here.

TIP

Are there other ways to zoom my publication?

Yes, there are several shortcuts you can use to quickly zoom a publication. For example, you can press **F9** on the keyboard to quickly zoom in and out of a publication. To quickly zoom to 100 percent, you

can click the **View** tab and, in the Zoom group, click the **100%** button. To quickly view the whole page, click the **Whole Page** button in the same Zoom group. You can click the **Page Width** button in the Zoom group to match the width of the page to the width of the Publisher window.

Add Text

When you create a new publication based on a design, Publisher inserts a layout for the text and displays placeholder text in the text boxes, also called *objects* or *frames*. The placeholder text gives you an idea of the text formatting that the design applies and what sort of text you might place in the text box.

As you build your publication, you replace the placeholder text with your own text. After you add your text, you can apply formatting to it, as well as move and resize it, as discussed in Chapter 21.

Add Text

1 Click the text object that you want to edit.

You may need to zoom in first to see the text object.

A Publisher surrounds the selected object with selection handles (and).

2 Select the placeholder text within the object.

3 Type your own text.

Publisher replaces any placeholder text with the new text that you type.

Note: To apply formatting to text and to move and resize text box objects, see Chapter 21.

You can click anywhere outside of the text object to deselect the text box.

To edit the text at any time, you can click the text box and make your changes.

Add a New Text Box

You can add new text boxes to a publication and type your own text. For example, you might need to add a new text box to an empty area in your layout to include additional information, or you might need to add new text boxes to a blank publication.

When you add a text box to a publication, Publisher does not supply any placeholder text. Therefore, when you fill the text box with your own

text, you do not replace any existing text. After you enter text, you can format it or move and resize it as described in Chapter 21.

Add a New Text Box

- ➊ Click the **Home** tab.
- ➋ Click **Draw Text Box**.
changes to +.
- ➌ Click at the spot that represents the upper-left corner of the text box.
- ➍ Drag down and to the right until the text box is the size that you need.
- ➎ Release the mouse button.

A The text box appears on-screen, with the insertion point inside (+ changes to |).

6 Type the text that you want to insert into the text box.

Note: To apply formatting to text and to move and resize text box objects, see Chapter 21.

7 Click anywhere outside the text object to deselect the text box.

Swap Pictures

You can add pictures to your publication — pictures stored on your hard drive or pictures you download from the Internet — as described in Chapter 3. Publisher's Swap Pictures feature enables you to insert several pictures simultaneously into the *scratch area*, a space outside the publication page. Then, you can drag one picture onto your publication and, if necessary, you can swap it for another picture in the scratch area. You can continue substituting different pictures until you find the right one for your publication.

Swap Pictures

- ① Click the **Insert** tab.
- ② Click **Pictures**.

Note: To use online pictures, download them to your computer, as described in Chapter 3.

The Insert Picture dialog box appears.

- ③ Navigate to and select the pictures you want to consider.
You can select multiple pictures by holding **Ctrl** as you click each one.
- ④ Click **Insert**.

A The pictures appear in the scratch area outside your publication page.

Note: Publisher surrounds each picture you insert with selection handles (▫ and □).

5 Click anywhere in the scratch area outside the pictures so that none are selected.

6 Point at a picture you want to place on the publication page.

B A button containing an image of a mountain (▫) appears in the center of the picture.

7 Drag ▫ to place the picture on the publication page.

C The picture disappears from the scratch area and appears on the publication page.

8 Click anywhere outside the picture to deselect it.

9 To swap the image with another one, point at the picture you want to use as a replacement and drag until the new picture appears close to the existing picture on the publication page.

10 Release the mouse button when a pink outline appears.

D Publisher swaps the original picture for the new one.

TIP

To swap pictures, must they be in the scratch area?

No. You can swap two pictures on a publication page. Just follow the steps in this section, dragging one picture on the page on top of the other picture. The two pictures exchange places on the page. The scratch area is useful when you want to choose between multiple pictures for a page or when you want to add pictures to several pages. The pictures can temporarily reside in the scratch area while you make your decisions. When you no longer need a picture in the scratch area, click it to select it and then press **Delete**.

Save a Publication for Photo Center

Printing

Publisher enables you to save each page of a publication as an image that you can print as a photo using any photo printing method. Publisher saves each page of the publication as a JPEG or TIFF image — using the best possible resolution for photo printing — in a folder on your hard drive, and Publisher names the folder using the name of your publication.

You can print photos from your own printer, take a CD of photos to a photo printing location like Costco or Walgreens, or upload photos to commercial websites that will prepare printouts.

Save a Publication for Photo Center Printing

- 1 Open the publication containing the pictures you want to save for photo center printing.

Note: Publisher saves each page of the publication as a separate image.

2 Click the **File** tab.

Backstage view appears.

3 Click **Export**.

4 Click **Save for Photo Printing**.

5 Click **▼** and choose whether you want to create JPEG images or TIFF images.

6 Click **Save Image Set**.

The Choose Location dialog box appears.

7 Navigate to the folder where you want Publisher to save your images for photo printing.

8 Click Select Folder.

Publisher displays a progress bar as it saves your images. When it finishes, your publication reappears on-screen.

9 You can view the folder using File Explorer (Windows Explorer for Windows 7 users). Click the **Explorer** button on the Windows taskbar.

10 Navigate to the folder in which you chose to save your images.

A Publisher saves the images in a folder using the name of your publication.

B Publisher assigns image names to each page based on the page number in the publication.

TIP

Can I change the names that Publisher assigns to each image?

Yes. You can change them in File Explorer after Publisher creates them, or you can change them in Publisher before creating them by performing the steps that follow. In the Pages pane on the left side of the Publisher window, right-click a page. From the menu that appears, click **Rename**. In the Rename Page dialog box, type the name you want to use for the photo image (**A**) and click **OK**. Repeat these steps for each page in the publication. When you create photos for printing, Publisher names the photos using the page names you provided.

Chapter 21: Fine-Tuning a Publication

Change the Font, Size, and Color

You can control the font, size, and color of the text in your publication. By default, when you assign a publication design, Publisher uses a predefined set of formatting for the text, including a specific font, size, and color. You may need to change the font or increase the size to suit your publication's needs. For example, you might change the font, size, and color of the publication's title text to emphasize it. In addition, you can use Publisher's basic formatting commands — Bold, Italic, Underline, Subscript, and Superscript — to quickly add formatting to your text.

Change the Font, Size, and Color

Change the Font

- 1 Select the text that you want to format.
- 2 Click the **Home** tab.
- 3 Click the **Font** ▾.
- 4 Click a font.

A Publisher applies the font to the text.

Change the Font Size

- 1 Select the text that you want to format.
- 2 Click the **Home** tab.
- 3 Click the **Font Size** ▾.
- 4 Click a size.

B Publisher applies the font size to the text.

This example applies a 48-point font size.

Note: You can also change the font size by clicking the **Grow Font** and **Shrink Font** buttons (**A+** and **A-**) on the Home tab. Publisher increases or decreases the font size with each click of the button.

TIPS

How do I apply formatting to my text?

Select the text you want to format, click the **Home** tab, and click the **Bold** (**B**), **Italic** (**I**), **Underline** (**U** +), **Subscript** (**S** +), or **Superscript** (**S** +) buttons.

What is the toolbar that appears when I select text?

When you select text, the Mini toolbar appears, giving you quick access to common formatting commands. You can also right-click selected text to display the toolbar. If you want to use any of the tools on the

toolbar, simply click the desired tool; otherwise, continue working, and the toolbar disappears.

Changing the text color can go a long way toward emphasizing it in your publication. For example, if you are creating an invitation, you might make the description of the event a different color to stand out from the other details. Likewise, if you are creating a newsletter, you might make the title of the newsletter a different color from the information contained in the newsletter or even color-code certain data in the newsletter. Obviously, when selecting text colors, you should avoid choosing colors that make your text difficult to read.

Change the Font, Size, and Color

Change the Color

- ① Select the text that you want to format.
- ② Click the **Home** tab on the Ribbon.
- ③ Click ▾ next to the **Font Color** button (A ▾).

A In the color palette that appears, you can click a color to apply to the selected text and skip the rest of these steps.

4 Click **More Colors**.

The Colors dialog box opens.

5 Click the **Custom** tab.

6 Click a color in the Colors field.

7 Click a shade to refine your selection.

8 Click **OK**.

B Publisher applies the color to the text.

This example applies a red color.

TIP

Is there another way to change font characteristics?

Yes. You can also change font characteristics using the Font dialog box. Follow these steps:

- ① Select the text that you want to format.
- ② Click the **Home** tab on the Ribbon.
- ③ Click the dialog box launcher (in the Font group.

- 4 In the Font dialog box, click the font, style, size, color, underline style, or effect that you want to apply.
- 5 Click **OK**.

Apply a Text Effect

In addition to changing the font, size, and color of text in your publication, you can also apply text effects. These include a shadow effect, a reflection effect, a glow effect, and a bevel effect. Text effects can go a long way toward making your newsletter, brochure, postcard, or other type of publication appear more professional.

You apply text effects from the Format tab, under Text Box Tools. This tab appears on the Ribbon when you click in a text box or select text in your publication.

Apply a Text Effect

- 1 Select the text that you want to format.
 - 2 Click the **Text Box Tools Format** tab.
 - 3 Click **Text Effects**.
 - 4 Point at the type of effect you want to apply to view a gallery of choices.
 - 5 Click an effect.
- This example shows shadow effects.

A Publisher applies the text effect.

Change Text Alignment

Although each publication design automatically establishes an alignment to best suit the design, you can change the alignment to suit your own needs. You can use Publisher's alignment commands to change the way in which text is positioned both horizontally and vertically in a text object box. For example, you might choose to align text in the bottom-right corner of the text object box. There are nine alignment options: Align Top Left, Align Top Center, Align Top Right, Align Center Left, Align Center, Align Center Right, Align Bottom Left, Align Bottom Center, and Align Bottom Right.

Change Text Alignment

- 1 Select the text that you want to format.
 - 2 Click the **Text Box Tools Format** tab.
 - 3 Click a button in the Alignment group.
- A** This example uses the **Align Bottom Left** button (☒).

B Publisher applies the new alignment.

Add a Border

You can add a border to any object in a publication, including text boxes, clip art, and pictures, to add emphasis or make the publication more aesthetically appealing. Publisher comes with several predesigned border effects that you can apply to your publication. These include borders of various colors, shapes, and thicknesses, with or without background shading. If none of these suit you, you can create your own custom borders — for example, making each border line a different color or thickness.

Add a Border

- ① Select the text or object to which you want to apply a border.
- ② Click the **Drawing Tools Format** tab.
- ③ Click a border style.

A You can click  to display a gallery of borders from which to choose.

B You can click the **Shape Outline** button to make selections from available line styles, colors, and weights.

C Publisher applies the border to the object.

D You can click the **Change Shape** button to view available shapes for the border.

Control Text Wrap

To add visual interest, many publications include text as well as objects, such as photographs, clip art images, tables, charts, or other visual elements. You can control the way in which text wraps around a picture, table, chart, or any other object in a publication. For example, you may want a column of text to wrap tightly around an object, to appear above and below the object but not on the sides, and so on. Alternatively, you might want the text to simply appear on top of the object.

Control Text Wrap

- ➊ Create a text block and type text into it. (See Chapter 20 for details.)
- ➋ Insert a picture or other object inside the text block. (See Chapter 3 for details.)

Note: The picture might temporarily obscure some of your text. When you finish these steps, all text will be visible.

- ➌ Click the picture object or other object inside the text block to select it (▫ and □ appear around the picture).
- ➍ Click the **Picture Tools Format** tab.
- ➎ Click the **Wrap** Text button.

6 Click a text wrapping option.

Publisher applies the text wrapping.

A This example applies square text wrapping.

Link Text Boxes

When you add too much text to a text object, any text that does not fit in the text box is called *overflow*. In some cases, Publisher attempts to correct this problem with its AutoFit feature, which reduces the size of your text to make it fit. Alternatively, you can correct the problem of overflow text by creating a new text box adjacent to the existing one, linking the two text boxes, and flowing the extra text into the new text box. You use the Linking tools on the Text Box Tools Format tab to navigate and connect text boxes in a publication.

Link Text Boxes

Link Text Boxes

➊ Create a text block and type text into it. (See Chapter 20 for details.)

Note: Type all the text you need, even though you cannot see all of it.

➋ Create another text box; you will place the overflow text into this box.

- 3 Click in the text box that contains the overflowing text.
- 4 Click the **Text Box Tools** Format tab.
- 5 Click the **Create Link** button (changes to).

- 6 Click in the text box you created in Step 2 for the text overflow.

A Publisher links the two boxes, and moves any extra text from the first text box into the second text box.

B You can click the **Previous** button (⬅) to return to the previous text box, which contains a **Next** button (➡) that you can use to switch back to the overflow text box.

Note: You can turn off the AutoFit feature by selecting the text object to which AutoFit has been applied, clicking the **Text Box Tools Format** tab, clicking the **Text Fit** button, and clicking **Do Not Autofit**.

TIPS

How do I break a link?

Click in the first linked text box, click the **Text Box Tools Format** tab, and then click the **Break** button (✖).

Are there other ways to handle overflow?

Yes. You can also use Publisher's Text Fit tools to auto-fit your text into the text box. Click the text box to select it, click the **Text Box Tools Format** tab, click the **Text Fit** button, and choose **Best Fit**.

Move and Resize Publication Objects

When you insert an object, such as a text box, photograph, table, and so on, into a publication, you might need to make it larger or smaller, or you might need to move it to achieve the effect you want. For example, you may want to resize a text object or move or resize a picture you place in a text box to fit more text into the box. When you select an object, an outline and handles appear around it. You can drag the handles to make the object larger or smaller, and drag the outline to

move the object.

Move and Resize Publication Objects

Move an Object

① Click the object that you want to move.

A Publisher surrounds the selected object with handles (▫ and ○).

② Position the mouse pointer over the edge of the object until it changes from ▷ to ✎.

③ Drag the object to a new location.

Publisher moves the object.

B This example moves a picture object.

Resize an Object

1 Click the object that you want to resize.

C Publisher surrounds the selected object with handles (▫ and ▬).

2 Position the mouse pointer over the edge of the object until it changes from to or .

Note: To maintain an object's perspective, drag a corner using or .

3 Click and drag a handle inward or outward to resize the object.

D A dotted line represents the object's proposed size.

When you release the mouse button, Publisher resizes the object.

E This example resizes a picture.

TIPS

Can I rotate an object?

Yes. Click the object to select it, and then click the green rotation handle at the top of the selected object and drag it in the direction you want to rotate the object. When you have rotated the object to the desired degree, release the mouse button.

How do I delete an object?

To remove an object from a publication, click the object to select it and press **Delete**. Publisher removes the object from the page. You can select more than one object to delete by pressing and holding **Ctrl** as you click each object.

Edit the Background

You can add visual interest by changing the background of your publication page. You can assign a new background color, gradient effect, or texture. If you decide you no longer want a background, you can remove it.

Clicking the Background button in the Page Design tab enables you to quickly choose from among several solid backgrounds and gradient backgrounds; alternatively, you can choose from a variety of textures, patterns, and tints, or even add one of your own photographs, from the Fill Effects dialog box.

Edit the Background

Apply a Background

- 1 Click the **Page Design** tab.
- 2 Click the **Background** button.
- 3 Click the background that you want to apply.

A Publisher applies the background.

Create a Picture Background

- ① Select the page you want to fill with a background picture.
- ② Insert the picture you want to use into your publication and drag it to the scratch area.
- ③ Right-click the picture.
- ④ Point the mouse at **Apply to Background**.
- ⑤ Click either **Fill** or **Tile**.

This example uses Fill.

B Publisher fills the page you selected in Step 1 with the photo or tiles of the photo.

TIPS

How do I remove a background?

Click the **Page Design** tab, click the **Background** button, and click at the left edge of the gallery under **No Background**. The option for no background is white and fades into the gallery, but as you move the mouse, the white square becomes visible.

Can I apply a custom background?

Yes. You can assign a one-color or two-color gradient background using colors you choose. You can also apply a texture, a pattern, or your own custom tint. You access these options from the Format Background dialog box. To open this dialog box, click the **Page Design** tab, click **Background**, and choose **More Backgrounds**.

Add a Building Block Object

You can use Publisher's Building Block objects to add all kinds of extra touches to your publication projects. For example, you can add a calendar to a newsletter or a graphical marquee to a letterhead. The Building Block objects encompass a wide variety of design objects, such as mastheads, borders, boxes, and even coupons and logos. You can customize the design of a Building Block object as needed — for example, you might change the border or fill color of an object. You can also change the text in a Building Block object by selecting it and typing over it.

Add a Building Block Object

- ① Click the **Insert** tab.
- ② Click a button in the Building Blocks group.

This example chooses **Calendars**.

3 Click the Building Block object you want to insert.

A Publisher adds the object to your publication.

B You can move and resize the object to suit your layout.

Note: Refer to the section “Move and Resize Publication Objects,” earlier in this chapter, to learn more.

TIP

How do I customize a Building Block object?

Many of the Building Block objects are composed of simple lines and shapes. You can customize the appearance of an object by selecting individual parts of it and making changes to the selection’s formatting. Note that you may need to ungroup an object to edit its individual elements. To do so, click the object, click the **Home** tab, and then click the **Ungroup** button () as many times as necessary to free all of the object’s individual elements. When you finish making your edits, click the **Group** button () to turn the elements back into a single object.

Create a Building Block Object

If you find yourself using an object you have created over and over, you can save that object as a Building Block object and reuse it as needed. For example, if you use the same headline in every publication you create, you can save it as a Building Block object; then, you can insert it into a publication anytime you need it (simply follow the steps in the previous section, “Add a Building Block Object,” to insert it). Anything you save as a Building Block object is accessible from any other Publisher files you open.

Create a Building Block Object

- ① Click the element that you want to save.
- ② Click the **Insert** tab.
- ③ Click a button in the Building Blocks group:

Click **Page Parts** if the Building Block object you want to create is a heading, sidebar, or something similar.

Click **Calendars** if the Building Block object you want to create is a calendar.

Click **Borders & Accents** if the Building Block object you want to create is a border or accent.

Click **Advertisements** if the Building Block object you want to create is a coupon or other advertisement.

In this example, a **Page Parts** building block is created.

④ Click **Add Selection to Building Block Gallery**.

Note: The precise name of this option varies, depending on the button you click in Step 3.

The Create New Building Block dialog box appears.

- 5 Type a name for the item.
- 6 Type a description for the item.
- 7 Click ▾ to choose a category for the item.
- 8 Type keywords describing the item.
- 9 Click **OK**.

Publisher creates the Building Block object.

- A You can view the item by clicking the button you clicked in Step 3.

TIPS

How do I remove a Building Block object?

Click the **Insert** tab and click the appropriate button in the Building Blocks group. Then right-click the Building Block object you want to delete, choose **Delete**, and click **OK** to confirm the deletion.

Are there more Building Block objects?

Yes. To access more Building Block objects, click the appropriate button in the Building Blocks group and choose **More Building Blocks** from the menu that appears. (The precise name of this option varies, depending on what button you click.) The Building Block Library window opens, displaying all Building Block objects of the type you selected.

Part VIII: OneNote

OneNote acts like a digital notebook, enabling you to jot down ideas, sketch out plans, brainstorm business strategies, and compile scraps of information in one searchable, shareable, easy-to-access location. You might use OneNote to take notes during meetings and lectures, collect research materials from the web, gather information about an upcoming trip, assemble ideas for a home improvement project, and more.

Chapter 23: Organizing and Sharing Notes

Chapter 22: Taking Notes with OneNote

Navigate OneNote

You can digitally use OneNote the same way that you use physical binders, with the added improvement of being able to easily search and share your notes.

In OneNote, you can create notebooks in which you type, write, and draw your ideas; compile scraps of information; create tables; and paste in digital images such as a screenshot of a web page or a photograph. You can divide notebooks into sections — represented as tabs — to organize them, and you can group sections containing related information together, as described in Chapter 23.

Navigate OneNote

- ① Click the **Show Notebook** ▾ to display a list of notebooks that you can open.
 - ② Click the notebook you want to open.

A OneNote opens the notebook you clicked.

3 Click a section tab.

A screenshot of the Microsoft OneNote application. The window title is "Tables - OneNote". The ribbon menu shows "FILE", "HOME", "INSERT", "DRAW", "HISTORY", "REVIEW", "VIEW", and "LAYOUT". The "HOME" tab is selected. The ribbon also includes "Basic Text", "Styles", "Tags", and "Search (Ctrl+F)" options. On the left, a navigation bar shows "First Notebook" with a dropdown arrow, "Pictures", "Tables and Screen Clippings", and a plus sign. The main content area displays a table titled "3 month sales" with data for various companies across four columns: Industry, Q1 Sales, Q2 Sales, and Q3 Sales. A red number "4" is overlaid on the top right corner of the table area.

	Industry	Q1 Sales	Q2 Sales	Q3 Sales
A. Datum Corporation	Tech	\$ 195,449	\$ 746,907	
Adventure Works	Travel	\$ 123,721	\$ 733,396	
Blue Yonder Airlines	Travel	\$ 934,763	\$ 246,554	
City Power & Light	Utilities	\$ 299,293	\$ 674,295	
Coho Vineyard	Liquor	\$ 226,783	\$ 659,285	
Contoso, Ltd	Misc	\$ 239,219	\$ 287,989	
Contoso Pharmaceuticals	Medical	\$ 371,570	\$ 644,368	
Consolidated Messenger	Tech	\$ 579,825	\$ 448,399	
Fabrikam, Inc.	Utilities	\$ 639,630	\$ 625,474	
Fourth Coffee	Liquor	\$ 876,740	\$ 567,216	
Graphic Design Institute	Education	\$ 788,390	\$ 540,282	
Humongous Insurance	Financial	\$ 692,545	\$ 577,599	
Librairie, Inc.	Tech	\$ 902,264	\$ 206,331	
Lucerne Publishing	Misc	\$ 925,906	\$ 443,552	
Margie's Travel	Travel	\$ 299,370	\$ 843,834	

B OneNote displays the section tab you clicked.

4 Click a page in the tab.

C OneNote displays the page you clicked.

TIP

Can I keep all my notebooks visible at all times?

Yes. You can use the OneNote Navigation bar. Click ▾ beside your notebook's name. Then, click the pushpin (✚) to pin the OneNote Navigation bar on the left side of the window. Beside each notebook, the **Expand Notebook** button (+) appears; click it to view the notebook's sections. Click the **Collapse Notebook** button (⊖) to collapse the notebook and hide its sections. To hide the Navigation pane, click the pushpin (✚).

Notebooks

-  First Notebook ▲
✖
-  Pictures
-  Tables and Screen...
-  My Notebook ▼

Type and Draw Notes

You can jot down ideas in OneNote in a few ways. For example, you can type them using your keyboard. You can then format your text as desired, changing the font, size, and color; applying bold, italics, underline, subscript, or superscript formatting; and more.

Alternatively, you can use OneNote's drawing tools to sketch drawings, such as a map. And, on touch devices, you can use drawing tools to hand-write notes and then convert them to typewritten notes.

Regardless of the method you use, you can move the notes you create around on the page as desired.

Type and Draw Notes

Type Notes

- ➊ Click a section and a page on which you want to type a note.
- ➋ Click the **Draw** tab.

3 Click Type.

4 Click the spot on the page where you want to type.

5 Type your note.

Note: When you finish, click anywhere outside the box containing the note.

Note: Using the tools on the Home tab, you can change the text font, size, and color, and also apply bold, italics, underline, subscript, or superscript formatting and more.

Draw Notes

- 1 Click a section and a page on which you want to type a note.
 - 2 Click the **Draw** tab.
 - 3 In the Tools group, click a drawing tool.
- A** You can click □ to view all available drawing tools.

④ Draw or handwrite your note.

Note: When you finish, click **Type** to stop drawing.

TIPS

How do I move a note?

To move a typed note, position the mouse over the text; the note container appears. Position the mouse pointer over the container's top; when  changes to , click and drag the container to the desired location. To move a drawing, click the **Lasso Select** button on the Draw tab and draw a box around the drawing. Then click **Type** and move the mouse over the drawing ( changes to ) ; drag the drawing.

Can I convert handwriting to typing?

Yes. Click **Type**, drag the mouse pointer over the handwriting to select it, and click **Ink to Text**.

Insert and Format a Table

You can create sophisticated-looking tables in your notes. In addition to inserting and deleting rows in tables as needed, OneNote supports formatting options for cells, including shading them and hiding their borders. You can also align cell information to the left or right edge of the cell or center it within the cell. In addition, you can sort data in your table so you can organize and display information the way you want. You can also convert a table in OneNote to an Excel spreadsheet if you need to perform detailed analysis on the table data.

Insert and Format a Table

Insert a Table

- 1 Click in the notebook where you want the table to appear.
- 2 Click the **Insert** tab.
- 3 Click **Table** to display a table grid.
- 4 Slide the mouse pointer across the squares that represent the number

of rows and columns you want in your table.

- 5 Click the square representing the lower-right corner of your table. The table appears in the location you selected in Step 1.

A The insertion point appears in the upper-left corner of the table, ready for you to type.

B Table Tools appear on the Ribbon.

Apply Table Formatting

6 Click the **Layout** tab.

C You can select any of these options to format your table.

7 Click a cell in the table or select multiple cells.

8 Click an option on the Ribbon.

Note: In this example, OneNote applies shading. For shading, you can click the bottom half of the **Shading** button to display and select from a palette of shading colors.

D OneNote applies the option you selected in Step 8 to the cell you selected in Step 7.

TIPS

How do I select more than one cell?

Selecting multiple cells is useful when you want to apply the same option to several table cells. Click in the first cell you want to select and drag either across or down to select adjacent cells. You can select non-adjacent cells if you press and hold **Ctrl+Shift** as you drag across each cell you want to select.

How do I delete a table?

Click in the table, click **Layout** on the Ribbon, and then click the **Delete Table** button.

Attach Files to Notes

Sometimes it is helpful to attach a document or other file to a page in OneNote. For example, suppose you have created a spreadsheet for expense account transactions in Microsoft Excel; you can attach that spreadsheet to a OneNote page devoted to work. Likewise, you could attach a PowerPoint presentation to a OneNote page devoted to a business meeting that you plan to attend.

When you attach a file to a note in a OneNote notebook, an icon for that file appears on the note; you can double-click the icon to open the file from within OneNote.

Attach Files to Notes

- ① Click a section and a page on which you want to attach a file.
- ② Click the place on the page where you want the file attachment to appear.
- ③ Click the **Insert** tab.

4 Click File Attachment.

The Choose a File or a Set of Files to Insert dialog box opens.

5 Locate and select the file you want to insert.

6 Click Insert.

OneNote displays the Insert File window.

7 Click Attach File.

A OneNote inserts an icon for the file.

You can move the shortcut icon as needed by dragging it.

Send Information to OneNote

Suppose that you have composed a letter in Word or created a worksheet in Excel. You can send a copy of your work in a OneNote notebook using the OneNote Clipping Tool.

You can think of using the OneNote Clipping Tool to place information from another program into OneNote as a quick and easy way to copy and paste information. If you have multiple documents open in multiple programs, the OneNote Clipping Tool copies the last document you viewed in another program to OneNote.

Send Information to OneNote

- 1 Open any document in any Office program.

This example uses a letter in Word.

- 2 On the Windows taskbar, click the **Send To OneNote** button.
- 3 Click **Send to OneNote**.

The Select Location in OneNote dialog box appears.

- ④ Click a location in the notebook where you want to place the document.
- ⑤ Click **OK**.

A The document appears in OneNote.

Note: If you use these steps for an Excel workbook, OneNote prompts you to choose between inserting a file attachment icon, a spreadsheet, or a chart or table.

Insert a Screen Clipping

You can use OneNote's Screen Clipping tool to capture parts of anything you can view on-screen — including documents and web pages — and paste them into OneNote. For example, you might clip an image of a web page devoted to a car you are interested in buying, or a price sheet for a service you are considering using. You can move a screen clipping the same way you move a note. For more information, refer to the tip “How do I move a note?” in the section “Type and Draw Notes,” earlier in this chapter. This section demonstrates clipping from a web page.

Insert a Screen Clipping

- ① Open the document or page that contains the item you want to clip. This example clips a part of a web page.
- ② On the Windows taskbar, click the **OneNote Clipping Tool** button.
- ③ Click **Screen Clipping**.

The screen dims and ▶ changes to +.

- 4 Click and drag from the top-left corner to the bottom-right corner of the area you want to clip.

Note: The part of the screen you select no longer appears dimmed.

- 5 In the Select Location in OneNote dialog box, click a location for the clipping.

- 6 Click **Send to Selected Location**.

A The clipping appears in OneNote.

B The clipping includes the date and time you created it.

Note: You can move a screen clipping the same way you move a note. For more information, refer to the tip “How do I move a note?” in the section “Type and Draw Notes.”

Create a Quick Note

Even if OneNote is not open, you can create a Quick Note to quickly jot down information. You can think of Quick Notes as electronic, yellow sticky notes. You can position Quick Notes anywhere on your screen and leave them there for as long as you need to refer to them. When you no longer need a particular Quick Note, you can close its window. As soon as you create a Quick Note, OneNote saves it to your OneNote notebook, so you can view it again from OneNote. You can also search and organize Quick Notes the same way you search and organize regular notes.

Create a Quick Note

- ➊ Press **Win+N** to display the OneNote Clipping Tool window.
 - ➋ Press **N** or click **New Quick Note**.
- A** A Quick Note window appears.
- ➌ Type your note.

Note: To format note text, select it and use the commands on the Mini toolbar.

④ Click  to close the note.

You can click  in the OneNote Clipping Tool window to hide it.

⑤ Launch OneNote.

⑥ Click .

⑦ Click **Quick Notes**.

B Your Quick Notes section appears.

C OneNote displays the most recent Quick Note you created.

D You can click here to review other Quick Notes.

Record an Audio Note

If you are attending a significant meeting or participating in an important conference call, you can use OneNote to record it and store the recording as part of your notes. As you record, you can type notes into OneNote; when you do, OneNote links the note to the recording, displaying a small icon alongside it. You can then click this icon to listen to the audio that was recorded at the time you typed the note.

To record audio, you must have a microphone. Ask permission before recording someone.

Record an Audio Note

- ① With the page to which you want to attach a file open in OneNote, click the **Insert** tab.
- ② Click the **Record Audio** button and begin speaking.
OneNote begins recording.

A A shortcut icon for the audio file appears.

B The Audio & Video Recording tab appears, displaying playback controls.

C You can type a note as you record, and OneNote links the note to the recording.

3 To stop recording, click the **Stop** button.

OneNote stops recording.

D To listen to the recording, double-click the **Audio Recording** icon.

E You can point the mouse at a note you typed during recording to see beside it, indicating the note is linked to the recording.

TIPS

Why do I care if OneNote links a typed note to an audio recording?

The link gives you another way to play the audio. When you slide the mouse pointer over the note you typed while recording, OneNote displays beside the note; click to listen to the recorded audio.

Can I record video notes?

Yes, if your computer features a webcam. Click the **Record Video** button on the Insert tab. OneNote displays the Audio & Video Recording tab and launches a video screen in which you can view the footage as it is recorded. To stop recording, click the **Stop** button on the Ribbon.

Chapter 23: Organizing and Sharing Notes

Create a New Notebook

You can create as many notebooks as you want. For example, you might create a notebook to hold notes for a trip you are planning or a notebook to hold information relating to a home project.

New notebooks contain one section and one page by default; you can add more sections and pages as needed. See “Create a New Section” and “Create a New Page” for details.

When you create a new notebook, you specify where the notebook should be stored — on the web, on a network, or on your computer.

Create a New Notebook

- 1 Click the **File** tab.

- 2 Click **New**.

- 3 Choose a place to store the notebook.

In this example, OneNote saves the notebook to the computer’s hard

drive.

④ Type a name for the notebook.

A To save the notebook somewhere other than the default folder, click **Create in a different folder** and select the folder in which to save the notebook.

⑤ Click **Create Notebook**.

B OneNote creates a new notebook.

C The new notebook contains one section.

D The section contains one page.

Create a New Section

You can use sections in notebooks to help you organize information. For example, if you are planning a trip to multiple cities, you might want to create sections for each city. Or, if you are planning a trip to one city, you might want to create separate sections for travel arrangements, hotel arrangements, and sites to see during your stay. OneNote names each new section as New Section 1, New Section 2, and so on, by default, but you can rename the sections. For help renaming sections, see “Rename a Section or Page,” later in this chapter.

Create a New Section

- ➊ Click ▾ to display a list of notebooks that you can open.
- ➋ Click the notebook you want to open.
- ➌ Click the **Create a New Section** tab (+).

Note: For help opening a notebook, see Chapter 22.

A OneNote creates a new section tab and selects its name.

Note: You can type a new name and press **Enter** or you can just press **Enter** or click anywhere to accept the default name.

Create a New Page

You can easily add new pages to a notebook section. For example, if you are using OneNote to plan a vacation, you might create a notebook with one page for each phase of the trip or for travel arrangements, hotel arrangements, and sites to visit. Or if you are using OneNote to plan a meeting, you might create a notebook with one page for each topic the meeting will cover.

When you create a new page, you can opt to create a blank page, or you can create a page using a template — for example, to create a to-do list.

Create a New Page

- ➊ Click the **Insert** tab.
 - ➋ Click the bottom half of the **Page Templates** button.
 - ➌ Click **Page Templates**.
- A The Templates pane appears.

4 Click the name of a category to reveal templates available in that category.

5 Click a template.

B OneNote creates a new page based on the template you selected.

C The page title appears here.

D To close the Templates pane, click **x**.

E To create a blank, untitled page, simply click the **Add Page** **⊕**.

Note: To move a page to a different section or notebook, right-click the page title and choose **Move or Copy**. In the Move or Copy Pages dialog box, click beside the notebook in which you want to store the page, click the desired section, and then click **Move or Copy**.

Rename a Section or Page

OneNote assigns new section names, such as New Section 1, New Section 2, and so on, by default. OneNote also assigns default names to pages.

You can assign your sections and pages more descriptive names to keep better track of where you have stored various pieces of information. For example, if your notebook relates to a project, you might create sections for each phase of the project and assign section names accordingly.

Rename a Section or Page

➊ Right-click the tab for the section you want to rename.

A To rename a page, right-click the page's name.

➋ Choose **Rename**.

OneNote selects the current section or page name.

➌ Type the new name and press **Enter**.

B OneNote applies the name you typed to the section tab or the page.

Note: You can delete a section or a page by right-clicking its title and choosing **Delete** from the menu that appears.

Group Sections

If your notebook contains several related sections, you can gather those sections into a group to make it easier to locate the section you need. For example, suppose that you are planning a vacation and have created a OneNote notebook to keep track of your research. You might gather the notebook's transportation-related sections — one with flight information, one for rental cars, one for hotel information, and so on — into a group. Or if you are using OneNote to jot down ideas for your business, you might gather all the sections that pertain to a particular project in one group.

Group Sections

- ➊ Right-click any section.
- ➋ Click **New Section Group**.

OneNote creates a new section group.

- 3 Type a name for the section group and press **Enter**.

- 4 Click a tab.

- 5 Drag the tab to the section group (**4** changes to **5**).

OneNote moves the tab to the section group and displays the section

group.

A The section tab you moved in Step 5 appears in the section group.

B Click the **Navigate to Parent Section Group** button (5) to return to the regular view.

You can click the section group at any time to see its contents.

Note: Repeat Steps 4 and 5 to add additional section tabs to the section group.

TIPS

Can I remove a section tab from a group?

Yes. Open the section group, click the tab you want to move, and drag it to the **Navigate to Parent Section Group** button (5).

Can I change the order in which sections appear?

Yes. Click the tab for the section you want to move, drag the tab to the

desired position among the sections, and release the mouse button. You can also change the order of pages in a section; to do so, click the page title and drag it up or down to the desired position among the pages.

Search Notes

As you enter more notes into OneNote, you may find it difficult to locate the information you need. Fortunately, OneNote offers a robust search function. Using it, you can locate any text in your OneNote notebooks — even text found in graphics. You can limit your search to a particular notebook or section or search all notebooks and sections. If you have enabled OneNote's Audio Search feature, you can also search audio and video for spoken words. Note that in order to search audio and video, you must enable the Audio Search function. For help, see the tip at the end of this section.

Search Notes

Set Search Scope

① Click the **Search** ▾.

A A list of OneNote elements that you can search appears.

- 2 From the list, click the OneNote element you want to search.

This example uses **All Notebooks**.

Conduct a Search

- 1 Click in the OneNote **Search** field.

B A drop-down list appears, displaying options for searching as well as previous search results.

2 Type your search text.

C As you type, potential matches to your search criteria appear.

3 Click a match to view the page.

A screenshot of the Microsoft OneNote application window titled "Wish List - OneNote". The ribbon menu is visible at the top with tabs like FILE, HOME, INSERT, DRAW, HISTORY, REVIEW, and VIEW. The search bar at the top right contains the text "Wish List". A context menu is open over the search bar, with a red circle labeled "D" pointing to the "Wish List" item under "Recent picks". The main workspace shows a note titled "Wish List" with a subtitle "Friday, December 21, 2012 0:40 AM". The note content includes a snippet "Wouldn't it be nice..." and an image of a blue BMW Active Hybrid 3 car driving on a road. The image has a waterdrop graphic with the text "PAIN ON WINS. THE BMW ACTIVE HYBRID 3 WITH 139 g CO2/km".

D OneNote displays the page.

E OneNote highlights the search text.

TIP

How do I search audio and video?

To search audio and video, you must enable OneNote's Audio Search function. To do so, click the **File** tab and choose **Options**. In the OneNote Options dialog box that appears, click **Audio & Video** and select **Enable searching audio and video recordings for words** (changes to). The Audio Search dialog box appears; click the **Enable Audio Search** button. Finally, click **OK** to close the OneNote Options dialog box.

Search for Recent Edits

You can search for recent changes that you have made in OneNote. Suppose that you made a change to your notebook that you want to view, but you cannot remember exactly where in your notebook you made the change. You can search the current notebook, section, section group, or all notebooks. You can search for any change you might have made today, since yesterday, within the last seven, 14, or 30 days, within the last three months, or within the last six months. Or, you can search for changes made to all pages sorted by date.

Search for Recent Edits

- ① Click the **History** tab.
- ② Click **Recent Edits**.
- ③ Click a timeframe.

A OneNote opens the Search Results pane and displays pages in the current notebook that you have edited in the timeframe you selected in Step 3.

You can click any page in the list to view that page; edits appear highlighted in yellow.

B You can click ▾ to change the elements OneNote searches.

C You can click ▾ to control the order in which the search results appear.

4 Click ✕ to close the Search Results pane.

Set Synchronization Options

OneNote enables you to store your notebooks in the cloud, and, when you do, OneNote keeps them synchronized and up-to-date by default. You can access them using the OneNote web app, any computer running Windows 7 or Windows 8, and many mobile devices.

But there may be times when you want or need to synchronize changes manually. For example, suppose that you want to synchronize notebook changes to the cloud before you shut down your computer. OneNote enables you to check sync status as well as synchronize your changes manually.

Set Synchronization Options

- 1 Click the **File** tab.

- 2 Click **Info**.

- 3 Click **View Sync Status**.

OneNote displays the Shared Notebook Synchronization window.

4 Select a synchronization method (changes to).

This example uses the **Sync manually** option.

5 Click the **Sync All** button or an individual notebook's **Sync Now** button.

OneNote synchronizes changes to the cloud.

Note: To continue automatic synchronization, click **Sync automatically whenever there are changes**.

6 Click **Close**.

Share Notes with People Who Do Not Have OneNote

You can share pages in your OneNote notebooks with others who do not have OneNote by e-mailing the pages or by converting them to PDF or XPS files. When you e-mail pages from OneNote, it starts your e-mail program, creates a new message window containing the OneNote page in HTML format, and applies the page's title to the message's Subject line. You simply enter the recipient's address and any additional text and send the message as normal. You can also convert note pages, sections, or entire notebooks into PDF or XPS format so that you can distribute them to others who do not have OneNote.

Share Notes with People Who Do Not Have OneNote

E-Mail a Note Page

- 1 Display the page you want to e-mail in OneNote.

② Click the **Home** tab.

③ Click the **E-mail Page** button.

A OneNote launches your e-mail program, displaying a new message window containing the OneNote page.

B The message's Subject line contains the page's title.

C Any audio attached to the page appears as an e-mail attachment.

④ Type the recipient's e-mail address in the **To** field.

⑤ Click **Send**.

Your e-mail program places the message in your Outbox and will send the message when you initiate sending and receiving messages.

Convert Notes to PDF or XPS Format

① Display the page, section, or notebook you want to convert.

② Click the **File** tab.

- ③ Click **Export**.
- ④ Click **Page, Section, or Notebook**.
- ⑤ Click **PDF (*.pdf)** or **XPS (*.xps)**.
- ⑥ Click **Export**.

The Save As dialog box opens.

D The name of the page, section, or notebook appears in the File Name field.

7 Locate and select the folder in which you want to save the page, section, or notebook.

8 Click **Save**.

OneNote saves the page, section, or notebook in the format you specified.

TIP

Can I send a OneNote page as a PDF attachment to an e-mail message?

Yes. Display the page. Click the **File** tab, click **Send**, and click **Send as PDF**. Your e-mail program opens and displays a message with the OneNote page attached as a PDF file, and the page name appears in the Subject line. Type a recipient name and send the message.
